**Sun′burn.** Superficial inflammation of the skin, caused by exposure to the sun.

**Sun′dew.** Drosera rotundifolia.

**Sun′drops.** Œnothera glauca; mucilaginous, acrid plant, useful in certain eruptive diseases.

**Sun-fe′ver.** Fever of tropical regions, which is probably a severe form of febricula or simple fever.

**Sunflow′er.** Helianthus annuus. **False s.,** Helenium autumnale. **Swamp s.,** Helenium autumnale. **Tick′weed s.,** Coreopsis trichosperma. **Tur′pentine s.,** Silphium perfoliatum.

**Sun-pain.** See *Hemicrania.*

**Sun-rash.** Lichen.

**Sun-spots.** Ephelides.

**Sun′stroke.** Insolation.

**Supellec′tile Dio′genis.** Palm.

**Super-** (Lat.). In composition, above.

**Superac′id.** Excessively acid.

**Superacid′ity.** Excess of acidity.

**Superadd′ed teeth.** Permanent teeth other than those replacing milk teeth.

**Superalimenta′tion.** Feeding to excess; therapeutic overfeeding in tuberculosis, neurasthenia, and other affections.

**Super′bus** (proud). Rectus superior oculi muscle.

**Supercallo′sal.** Above the corpus callosum.

**Superchlo′ridum formyl′icum.** Chloroform.

**Supercil′ia** (pl. of supercilium, *super,* above, *cilium,* tarsal cartilage). Eyebrows. Two arched eminences—convex above, and more or less prominent according to the individual—which lie on the superciliary arch of the os frontis above the eyelids, and extend from the sides of the root of the nose to the temple. The inner extremity is more prominent than the outer. The eyebrows are covered with short and stiff hairs, which are directed from within outward and are commonly of the color of the hair of the head. The skin in which these hairs are implanted rests on the orbicularis palpebrarum, the frontalis, and superciliaris muscles, which move the eyebrows in different directions. The eyebrows serve as an ornament to the countenance, and possibly by covering the eye defend it from the impression of too strong a light; they also direct the perspiration from the eye.

**Supercilia′ris.** Corrugator supercilii; superciliary muscle.

**Supercil′iary** (*supercilium,* eyebrow). Relating to the supercilia or eyebrows. **S. arch′es,** s. ridges; two slightly projecting apophyses situated at the anterior surface of the os frontis, above the superior margin of the orbits. They are separated by the nasal boss and covered by the superciliaris muscle, to which they give atachment. **S. ar′tery,** branch of frontal artery to region above the eyebrows. **S. ridges,** superciliary arches.

**Supercil′ium** (*super,* above, *cilium,* tarsal cartilage). Eyebrow; see *Supercilia.* **S. acetab′uli,** the edge of the cotyloid cavity of the os innominatum.

**Superconcep′tion.** See *Superfœtation.*

**Su′perduct.** To carry up or elevate.

**Superevacua′tion.** Excessive evacuation.

**Superexcita′tion.** Excessive excitation or stimulation.

**Superfecunda′tion.** See *Superfetation.*

**Superfeta′tion.** Superfœtatio. Superfecundation, superimpregnation. Conception of a fœtus in a uterus already containing one. Impregnation of a female already pregnant. The possibility of this has been denied, but there is abundant evidence to show that it may occur at a very early period of pregnancy. Twin cases may be of this kind of superconception.

**Superfibrina′tion.** Increase in the absolute or relative amount of fibrin in the blood.

**Superfi′cial** (*superficies,* surface). On or near the surface. **S. fas′cia,** see *Fascia.*

**Superficia′lis.** Superficial. **S. col′li,** nerve formed by communicating branches from the second and third cervical nerves, distributed to the superficial parts of the neck. **S. vo′læ,** branch of radial artery, supplying muscles of the thenar eminence and anastomosing with the ulnar to complete the superficial palmar arch.

**Superficies**, su-per-fish′e-eez. Surface. **S. articula′ris arytenoide′æ**, facet on cricoid cartilage for the articulation of the arytenoid cartilages. **S. a. superio′ris**, superficies articularis arytenoideæ. **S. a. tibia′lis**, surface on the upper end of the fibula articulating with the tibia. **S. auricula′ris**, auricular surface. **S. a. il′ii**, auricular surface of the ilium. **S. conca′va** and **S. convex′a**, concave under and convex upper surfaces of the liver. **S. costa′lis**, costal surface. **S. facia′lis**, facial surface. **S. fibula′ris**, articular facet for the fibula on the bend of the tibia. **S. infratempora′lis**, zygomatic surface. **S. interpterygoide′a**, interpterygoid surface. **S. luna′ta acetab′uli**, semilunar surface of the acetabulum. **S. l. ra′dii**, sigmoid cavity of the radius. **S. nasa′lis**, nasal surface. **S. orbita′lis**, see *Maxillary bone* (*superior*). **S. perone′a**, superficies fibularis. **S. petro-occipita′lis**, surface of the posterior border of the petrous bone, articulating with the occipital behind the jugular fossa. **S. planta′ris pe′dis**, sole. **S. symphys′eos pu′bis**, surface of the pubis that is covered with cartilage for articulation with its fellow. **S. tempora′lis**, temporal surface. **S. thorac′ica**, costal surface.

**Superfœcunda′tio.** Superfœtation.

**Superfœta′tio** (*super*, above, *fœto*, to breed). Superfetation.

**Superfron′tal** or **Superofron′tal.** Upper frontal. **S. a′rea**, part of the upper frontal area, which is separated from the midfrontal area by a line passing from the orbit through the frontal eminence. **S. convolu′tion**, superior frontal convolution.

**Supergemina′lis** (*super*, above, *gemini*, testicles). Epididymis.

**Supergenua′lis** (*super*, above, *genu*, knee). Patella.

**Superhumera′le** (*super*, above, *humerus*, shoulder). The acromion; the upper part of the shoulder.

**Superimpregna′tion.** Superfetation.

**Superinvolu′tion.** Involution carried beyond the normal, leading to atrophy of the uterus.

**Supe′rior au′ris.** Attollens aurem. **S. rotun′dus clitor′idis**, ischiocavernosus.

**Superla′bia** (*labia*, labia pudendi). Clitoris.

**Superlacta′tion.** Excessive secretion of milk.

**Superliga′men** (*ligamen*, a band). A bandage or ligature by which dressings are retained.

**Superlig′ula** (*ligula*, tongue). Epiglottis.

**Superna′tant.** Floating on or above a liquid.

**Supernu′merary.** In excess of the normal number, as *s. teeth*.

**Supernutri′tion** (*nutro*, to nourish). Hypertrophy.

**Superofron′tal.** Superfontal.

**Superpetro′sal.** Superior petrosal.

**Superphos′phate.** Acid phosphate.

**Superpos′itus medico′rum** (*super*, above, *positus*, placed). Archiater or chief physician.

**Superpurga′tio** (*super*, above, *purgo*, to purge). Hypercatharsis.

**Su′persalt.** Persalt, acid salt; any salt having an excess of acid.

**Supersat′urate.** To add to a liquid a larger quantity of a substance than it can dissolve.

**Superscapul′aris.** Supraspinatus. **S. infe′rior**, infraspinatus.

**Superscrip′tion.** The ℞ or characteristic symbol of a prescription.

**Supersecrete′.** To secrete an excessive quantity.

**Supersecre′tion.** Excessive secretion.

**Superse′dent** (*super*, above, *sedo*, to sit). A remedy whose operation on any part or organ is to displace or prevent diseased action in that part or organ.

**Supersep′tal.** Above the septum, especially septum or tentorium cerebri; the designation of a small fissure in the brain.

**Supersphe′noid.** Above the sphenoid bone.

**Superstand′ard.** Above the standard; going beyond the normal requirements. **S. risk**, an insurance obligation in the case of a person whose habits or condition of life create an expectancy greater than the average of healthy persons. It has been proposed to place such risks in a special class with the premium less than that for normal risks.

**Superstib′ias potas′sicus.** Antimonium peroxide.

**Supertem′poral.** Superior temporal. **S. convolu′tion** or **gy′rus**, a gyrus between the Sylvian and supertemporal fissures. **S. fis′sure**, a fissure anterior to the Sylvian.

**Supervacua′tion.** Excessive evacuation; flux.

**Su′pinate.** To cause the arm or hand to move, so that the palm is toward the front; or to rotate the leg outward.

**Supina′tion** (*supinus*, lying on the back). The movement in which the forearm and hand are carried outward, so that the anterior surface of the latter becomes superior. The horizontal position on the back, with the legs and arms extended. It is often a sign of great weakness.

**Supina′toexten′sor mass.** Group of muscles on the radial and dorsal surfaces of the forearm.

**Supina′tor.** That which produces supination. A name of two muscles of the forearm. **S. bre′vis** or **mi′nor**, supinator radii brevis. **S. bre′vis accesso′rius**, brachiofascialis. **S. lon′gus** or **ma′jor**, supinator radii longus. **S. lon′gus accesso′rius**, portion of s. longus. **S. ra′dii bre′vis**, a muscle at the outer and back part of the forearm; it is attached, on the one hand, to the external tuberosity of the humerus and to a small portion of the posterior surface of the ulna, and is inserted into the upper third of the outer and upper surfaces of the radius; it produces, by contracting, supination. **S. ra′dii lon′gus** is seated at the anterior and outer part of the forearm; it arises from the inferior part of the outer edge of the os humeri and from the external intermuscular aponeurosis, and is inserted by a long tendon into the outer edge of the radius near the base of the styloid process; it causes supination of the forearm, which it can likewise bend on the arm. **S. re′flex**, flexion of the forearm caused by tapping the tendon of the supinator longus muscle.

**Supine′.** Lying on the back.

**Suppeda′nea** (*pes*, foot). Applications made to the soles of the feet; hypopodia.

**Supplanta′lia** (*planta*, the sole of the foot). Suppedanea.

**Supplemen′ta epiplo′ica** (*sub*, under, *pleo*, to fill). Appendiculæ pinguedinosæ.

**Supplemen′tal.** Supplementary.

**Supplement′ary.** Term applied to the accessory organs, as s. spleens, small bodies of splenic tissue found in the neighborhood of the spleen. **S. air**, see *Respiration*. **S. respira′tion**, peurile respiration.

**Support′er, abdom′inal** or **u′tero-abdom′inal** (*sub*, under, *porto*, to carry). Broad bandage applied to the abdomen so as to support and methodically compress it.

**Support′ing cells.** Name applied to a group of cells in the organ of Corti.

**Suppos′itor** (*sub*, beneath, *pono*, to place). An instrument for the introduction of a suppository into the rectum.

**Supposito′ria** (pl. of suppositorium). Official (Ph. U. S. and Br.) name of suppositories. See *Suppository*. **S. ac′idi carbol′ici** (Ph. Br.), suppositories each of which contains carbolic acid, gr. j; beeswax, gr. ij; oil of theobroma, gr. xij. **S. a. tan′nici** (Ph. Br.), suppositories each containing tannic acid, gr. iij, and ol. theobromæ, gr. xij. **S. belladon′næ** (Ph. Br.), contain each alcoholic extract of belladonna, gr. iss, in oil of theobroma. **S. glyceri′ni** (Ph. U. S. and Br.), the only official suppository in the Ph. U. S.; composed of glycerin, 6.0; sodium carbonate, 0.3; stearic acid, 0.5. **S. iodofor′mi** (Ph. Br.), suppositories each of which is composed of iodoform, gr. iij, and oil of theobroma, gr. xij. **S. morphi′næ** (Ph. Br.), suppositories each of which contains hydrochloride of morphine, gr. ¼, with oil of theobroma, gr. ij. **S. plum′bi cum o′pio** (Ph. Br.), each contains acetate of lead, gr. iij; opium, gr. j; and oil of theobroma, gr. xj.

**Suppos'itory** (*suppono*, to put under). A medicated cone or cylinder, intended to be introduced into the rectum, vagina, urethra, uterus, or nasal cavities. The vehicle commonly used for the active ingredients is cocoa butter. It may require admixture with wax to give it the proper consistence. Tallow with wax is used at times; glycerin of starch, starch, gelatin, or soap is also used. The application of a suppository was formerly termed *balanismus*.

**Suppressed'.** Repressed, stopped, prevented; said of a secretion, discharge, or growth, normal or pathological. **S. cusps,** absence of the normal number of cusps in a tooth. **S. teeth,** teeth not formed, making a deficiency in the normal number.

**Suppres'sio al'vi** (*sub*, beneath, *premo*, to press). Constipation. **S. lochio'rum,** suppression of the lochial discharge. **S. lo'tii,** suppression of urine. **S. men'sium,** amenorrhœa. **S. menstruatio'nis,** amenorrhœa. **S. sudo'ris,** suppression of sweat. **S. uri'næ,** suppression of urine; see *Urination*.

**Suppres'sion.** Failure of excretion or secretion or growth.

**Sup'purant.** Suppurative. An agent which causes pustulation or promotes the formation of pus.

**Sup'purate.** To form or secrete pus.

**Suppura'tion.** Purulence, purulency, gathering. Formation or secretion of pus; a frequent termination of inflammation which may occur in almost any tissue, caused by the presence of pyogenic microorganisms, usually staphylococci or streptococci.

**Sup'purative.** That which facilitates suppuration. Suppuratives are generally vesicants mixed with lard. **S. fe'ver,** fever accompanying suppuration; pyæmia.

**Supra-** (Lat.). In composition, above.

**Supra-acro'mial.** Above the acromion. **S.-a. ar'tery,** superior acromial artery.

**Supra-auric'ular.** Above the auricle. **S.-a. diam'eter,** inferior parietal diameter. **S.-a. point,** situated on the zygoma above the external auditory meatus.

**Supracho'roid** or **Suprachoroid'al.** Above the choroid. **S. lam'ina,** layer of choroid contiguous to the sclerotic. **S. space,** space between the velum interpositum and fornix.

**Suprachoroide'a.** Suprachoroid lamina.

**Supraclavic'ular.** That which is above the clavicle. **S. point,** Erb's point.

**Supracon'dylar** or **Supracon'dyloid.** Above the condyle, as *s. amputation of the thigh*.

**Supracos'tal** (*costa*, rib). Above or over a rib.

**Supracosta'les.** Twelve small fleshy fasciculi, flattened, triangular, and with radial fibres, passing from the transverse processes of each dorsal vertebra to the superior margin of the rib beneath.

**Supracot'yloid.** Above the cotyloid cavity, as *s. dislocation*.

**Supraëpicon'dylar.** Above the epicondyle.

**Supragen'ual** (*genu*, knee). Above the knee. **S. bur'sa,** subcrural bursa.

**Supragle'noid tu'bercle.** Rough surface of attachment above the glenoid cavity for insertion of the long head of the biceps.

**Supraglot'tic.** Above or over the glottis.

**Suprahepat'ic.** Above the liver. **S. veins,** see *Hepatic*.

**Suprahy'oid.** Above the hyoid bone. **S. aponeuro'sis,** fascia running between the hyoid bone and the tendon of the digastric muscle. **S. re'gion,** submaxillary region.

**Suprain'guinal re'gion.** Triangular space bounded by Poupart's ligament, rectus abdominis muscle, and horizontal line drawn through the crest of the ilium.

**Supralabia'lis.** Levator labii superioris.

**Supralum'bar.** Above the loins.

**Supramalle'olar.** Above the malleolus or malleoli.

**Supramam'mary.** Above the mammæ.

**Supramandib'ular.** Above the mandible or lower jaw.

**Supramar'ginal.** Above any margin or border. **S. convolu'tion, gy'rus,** or **gyre,** convolution in the parietal portion of the brain, forming the superior margin of the posterior arm of the Sylvian fissure.

**Supramas'toid.** Above the mastoid portion of the temporal bone, as *s. crest*.

**Supramaxil'la.** Superior maxillary bone.

**Supramax'illary.** Above or over the jaw; relating to the superior maxillary bone, as *s. nerve*, or to the nerve itself, as *s. neuralgia*.

**Supramea'tal.** Above the meatus auditorius.

**Supramen'tal.** Above the chin. **S. tri'angle,** see *Triangle*.

**Supranu'clear.** Above a nucleus, as *s. paralysis* of the facial nerve.

**Supraobli'quus.** Superior oblique.

**Supraoccip'ital.** Above the occiput. **S. an'gle,** included between lines from the inion and lambda to the auricular point. **S. bone,** squamous portion of the occipital bone.

**Supraomphalodym'ia** (*omphalos*, navel, *dyo*, to mingle). See *Somatodymia*.

**Supraor'bital** or **Supraor'bitar.** Situated above the orbit of the eye. **S. arch,** a curved and prominent margin of bone forming the upper boundary of the orbit, and separating the horizontal from the vertical portion of the bone. **S. ar'tery,** see *Frontal*. **S. fora'men,** notch or foramen completed by a ligament at the inner third of the orbital arch. It gives passage to the supraorbital or superciliary artery, a branch of the ophthalmic, which ascends the forehead and is distributed thereto. **S. line,** drawn horizontally just above the root of the external angular processes of the frontal bone. **S. nerve,** branch of the frontal nerve. **S. notch,** s. foramen. **S. point,** ophryon. **S. ridge,** s. arch. **S. sul'cus,** fissure on the median aspect of the frontal lobes parallel to the lower border of that surface. **S. vein,** branch of the facial running to the forehead.

**Suprapatel'lar.** Above the patella, as *s. tendon* of the quadriceps extensor muscle.

**Suprapel'vic.** Above the pelvis.

**Suprapin'eal.** Above the pineal gland.

**Suprapon'tile** or **Suprapon'tine.** That which is above the pons. **S. ar'teries,** branches of basilar.

**Suprapu'bian** or **Suprapu'bic.** That which is seated above the pubis. **S. nerve,** internal ramus of the inguinocutaneous branch of the first lumbar nerve; genitocrural branch. It descends almost vertically before the psoas muscle, and near the crural arch divides into two branches, one of which accompanies the spermatic cord and is distributed to the cremaster, scrotum, and integuments on the inner part of the thigh; the other issues from the pelvis with the femoral filaments, traverses the aponeurosis of the thigh, and is distributed to the integuments of the upper and anterior part of the limb.

**Supraren'aden.** Dry extract of suprarenal capsule.

**Suprare'nal** (*supra*, above, *ren*, kidney). Seated above the kidney. **S. ar'teries** supply the s. bodies; derived from the aorta, inferior phrenic, and renal arteries. **S. bod'y** or **cap'sule** or **gland,** see *Capsule, renal;* the name is applied also to the desiccated s. gland of the sheep, employed therapeutically in doses of gr. v–x (0.32–0.65). **S. ex'tract,** a principle, believed to be the internal secretion of the suprarenal bodies, extracted from these; it acts as a powerful constrictor of the arteries and increases vascular tension; employed locally as a hæmostatic and to suppress catarrhal secretion. **S. nerves,** branches to s. bodies from solar plexus. **S. plex'us,** formed by s. nerves from solar plexus. **S. sys'tem,** the adrenal body, thyroid gland, and anterior pituitary body, considered as the active agents in all oxidation processes within the organism (Sajous). **S. veins,** from the suprarenal bodies, emptying into the vena cava inferior and the left renal vein.

**Suprascap'ula.** Portion of the base of the scapula having a separate centre of ossification.

**Suprascap′ular.** Seated above the scapula. **S. ar′tery,** branch of thyroid axis supplying the supraspinatus and infraspinatus muscles. **S. bone,** bone found in lower animals, corresponding to the suprascapula in man. **S. fas′cia,** deep fascia covering the muscles of the suprascapular region. **S. fora′men,** formed by ossification of the coracoid ligament. **S. lig′ament,** coracoid ligament. **S. nerve** arises from the fifth cervical, passes through the suprascapular notch, and is distributed to the supraspinatus and infraspinatus muscles. **S. notch,** at the outer extremity of the superior border of the scapula at the base of the coracoid process. **S. re′gion,** portion of the back above the scapula. **S. veins,** tributaries of the external jugular from the suprascapular region.

**Suprascapula′ris.** Suprascapular. Supraspinatus muscle.

**Suprasemiorbicula′ris.** Orbicularis oris.

**Supraserra′tus.** Serratus posticus superior.

**Supraspi′nal.** That which is seated above a spine. **S. ar′tery,** branch of the posterior scapular artery. **S. fos′sa,** supraspinous fossa, a triangular depression above the spine of the scapula. **S. lig′aments,** these are two in number: 1. *Dorsolumbar* supraspinal ligament, extending above the spinous processes of the dorsal and lumbar vertebræ from the seventh cervical as far as the median crista of the sacrum. 2. *Cervical* supraspinal ligament, extending above all the cervical spinous processes, and attached above to the outer occipital protuberance. **S. mus′cle,** situated in the fossa supraspinata; attached, on the one hand, to the two inner thirds of the fossa supraspinata, and terminating, on the other, at the anterior part of the great tuberosity of the humerus; this muscle raises the arm; see also *Supraspinales.*

**Supraspina′les.** Muscles lying on the spinous processes of the vertebræ in the cervical region.

**Supraspina′tus.** Supraspinal, supraspinous.

**Supraspi′nous.** Supraspinal.

**Supraster′nal.** Above the sternum or breastbone. **S. ar′tery,** branch of the suprascapular artery to the skin of the upper part of the chest. **S. bones,** two small, bony nodules occasionally found united by ligament and cartilage to the upper part of the sternum. **S. fos′sa,** depressed space in the neck above the sternum. **S. nerve,** one of the supraclavicular nerves. **S. notch,** depression at the upper end of the sternum.

**Suprasterna′lis.** Suprasternal.

**Suprasyl′vian.** Above the fissure of Sylvius. **S. convolu′tion,** see *Gyrus, supramarginal.*

**Supratem′poral.** Above the temporal bone or temporal fossa.

**Supratro′chlear.** Above any trochlear or anatomical pulley. **S. fos′sa,** a depression above the trochlea on the anterior surface of the femur. **S. nerve,** a branch of the ophthalmic distributed to the upper eyelid and forehead.

**Supravag′inal.** Above or external to the vagina or any sheath.

**Su′ra.** Calf of the leg. The projection formed at the posterior part of the leg by the gastrocnemius muscles. Also the fibula.

**Su′ral.** Relating to the calf of the leg. **S. ar′teries,** inferior muscular branches of the popliteal. **S. mus′cles,** gastrocnemii. **S. nerve,** nerve formed by the junction of the external cutaneous branch of the peroneal and the communicating fibular nerves. **S. vein,** subcutaneous vein of the calf of the leg.

**Suralimenta′tion.** Superalimentation. Overfeeding.

**Sura′lis.** Sural.

**Sur′cingle.** Tail of the caudate nucleus.

**Sur′culi fel′lei** (pl. of surculus). Ducts which receive the bile from the penicilli of the liver and convey it to the hepatic duct.

**Sur′culus.** A division of a ramus or branch.

**Sur′ditas** (*surdus,* deaf). Deafness. **S. muto′rum,** deaf-mutism. **S. verba′lis,** word-deafness; see *Aphasia.*

**Sur′dity.** Deafness; surditas.

**Sur′domute.** A deaf-mute.

**Surdomu′titas** (*surdus,* deaf, *mutus,* mute). Deaf-mutism.

**Sur′dus.** Deaf.

**Sur′face.** Superficies; outer or limiting parts of the body, covered by the skin.

**Sur′feit** (*surfait* [Fr.], excess). Intemperance; excess of any kind. Colic from overeating.

**Sur′geon.** From *chirurgeon* (*cheir,* hand, *ergon,* work). One who practises surgery or devotes himself chiefly to that branch of medicine. In the United States Army, Navy, and Marine-Hospital Service, the members of the medical corps are ranked as *assistant surgeon, passed assistant surgeon,* and *surgeon,* the chief being called *surgeon-general.* **S.-apoth′ecary,** in Great Britain, one who unites the practice of surgery with that of the apothecary. A general practitioner, the ordinary medical man or family medical attendant in England; and when he combines, as he usually does, obstetrics with his practice, he is termed a *surgeon-accoucheur,* in contradistinction to the *physician-accoucheur,* who practises as a physician and an accoucheur. **Assis′tant s.,** see *Surgeon.* **S. den′tist,** a dentist. **S.-gen′eral,** see *Surgeon.* **Passed assis′tant s.,** see *Surgeon.*

**Sur′geoncy.** The office of a surgeon.

**Sur′geon's ag′aric.** Powder prepared from a species of mushroom, Boletus laricis or B. igniarius; used as a hæmostatic.

**Sur′gery.** The part of the healing art relating to external diseases or those subject to treatment by mechanical or operative measures, and to injuries of any part or organ, their treatment, and the operations adapted for their cure. In Great Britain the surgeon's office is called the surgery. **Abdom′inal s.,** s. which deals with any of the viscera contained in the abdomen. **Anaplas′tic s.,** plastic s. **Antisep′tic s.,** the use of antiseptic measures in operative surgery. **Asep′tic s.,** antiseptic s. **Autoplas′tic s.,** plastic s. **Conserv′ative s.,** that which looks rather to the preservation of a part than its removal. **Cosmet′ic s.,** plastic s. undertaken with the object primarily of correcting disfigurements. **Den′tal s.,** dentistry. **Ma′jor s.,** see *Surgery, operative.* **Mil′itary s.,** that which relates to the operations performed on the field of battle or subsequently, with the attention to be paid to the wounded, etc. **Mi′nor s.,** see *Operative s.* **Op′erative s.,** the treatment of disease by the use of the knife, as distinguished from the employment of mechanical or local medicinal measures; it includes *major* surgery, comprising the capital or more important operations, and *minor* surgery, the lesser, or those of every-day occurrence. **Orthope′dic s.,** treatment of deformities. **Plas′tic s.,** the restoration of lost parts or the correction of defects; see *Plastic.* **Vet′erinary s.,** s. of the domestic animals.

**Sur′gical.** That which relates to surgery. **S. anat′omy,** see *Anatomy.* **S. fe′ver,** fever, usually of brief duration, following a major surgical operation. **S. kid′ney,** inflammation of the kidney, usually purulent, secondary to disease or injury of the urinary tract below; it is a form of acute suppurative nephritis. **S. neck,** thin part of the shaft of the humerus below the tuberosities; the bone is frequently broken at this point. **S. tuberculo′sis,** tuberculous lesions capable of surgical treatment. **S. ty′phus,** pyæmia.

**Surinam′ bark** or **S. quas′sia.** Bark of Geoffroya surinamensis.

**Surinamine′.** Alkaloid derived from the bark of Geoffroya surinamensis.

**Sur′ra.** Disease of India, the Philippines, and other parts of the East, attacking horses, mules, and camels; caused by the presence of a species of Trypanosoma (hæmatomonas, trichomonas) in the blood. The carrier of the microrganism is believed to be the horsefly, genus *Tabanus,* or the biting stable-fly, genus *Stomoxys.*

**Surrec′ta al′ba.** Ranunculus flammula.

**Sur′rogate** (*sub*, under, *rogo*, to ask). Succedaneum.

**Sursumduct′.** To carry up or elevate.

**Sursumduc′tion** (*sursum*, upward, *duco*, to lead). Act of blending into one two images that are produced by placing a prism in front of one eye.

**Sursumver′gence.** Forced separation of lines of vision in a vertical plane, so that one eye is higher than the other.

**Sursumver′gent** (*sursum*, upward, *vergo*, to incline). Inclined to go upward, as *s. strabismus*, or vertical squint.

**Sursumver′sion** (*verto*, to turn). Consentaneous elevation of both eyes equally.

**Survi′val.** Persistence of life.

**Survi′vorship** (*super*, over, *vivo*, to live). In legal medicine, the probability that any individual has survived others in an accident which has been fatal to all. It is usually assumed that a male will live longer than a female of the same age, and that an adult will resist death longer than a child or an aged person.

**Susceptibil′ity** (*sub*, beneath, *capio*, to take). Sensibility in its most enlarged acceptation. Impressibility.

**Suscept′ible.** Readily impressible. Liable to be affected by morbid influences.

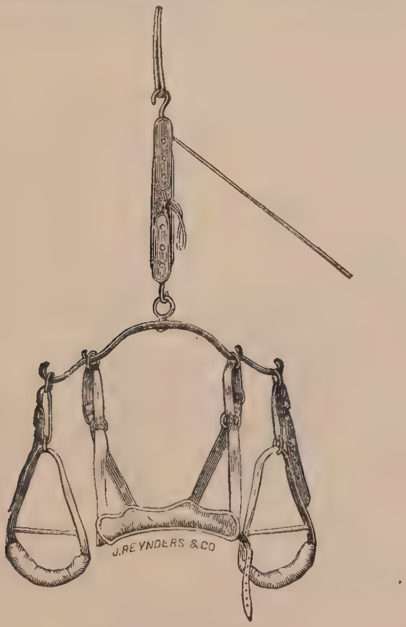
**Suscep′tio intestino′rum.** Intussusception.

**Susotoxin′** (*sus*, hog, *toxicon*, poison). Ptomain from cultures of hog-cholera bacillus.

**Suspend′ed anima′tion.** Temporary arrest of vital functions, as in syncope or trance.

**Suspendic′ulum** (*suspendo*, to hang). Cremaster.

**Suspen′sion.** Treatment adopted in some cases of chronic affection of the spinal cord to produce temporary extension by a process similar to that of hanging, support being given at the chin and back part of the head. Also procedure resorted to to straighten the spine as much as possible prior to the application of a plaster jacket. **S. of u′terus,** hysteropexy.

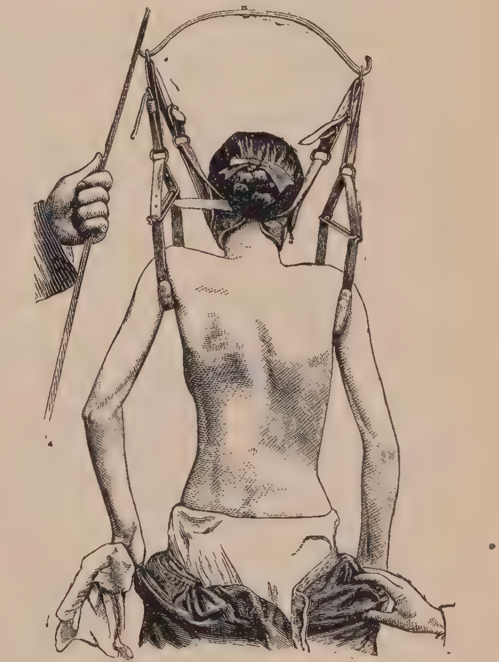


Suspensory apparatus.

**Suspenso′rium.** Suspensory. **S. hep′atis,** suspensory ligament of the liver. **S. tes′tis,** cremaster.

**Suspen′sory.** That which sustains or suspends. **S. band′age,** bandage intended to support the scrotum in diseases of the testicles or in scrotal hernia; it consists of a kind of bag, fixed above to a cincture, and retained below by strings passing between the thighs and fixed to the cincture behind. **S. lig′ament of axil′la,** part of deep layer of axillary fascia. **S. lig′ament of clit′oris,** dense band of fascia running from symphysis pubis to dorsum of clitoris. **S. lig′ament of the lens,** thin, transparent, membranous structure between the vitreous body and the ciliary process of the choroid, connecting the anterior margin of the retina with the anterior surface of the lens, and assisting in retaining the lens in its position. **S. lig′ament of the liv′er,** falciform ligament, broad ligament of the liver; triangular duplicature of the peritoneum, between the inferior surface of the diaphragm and the upper surface of the liver, continuous with the great falx of the umbilical vein. **S. lig′ament of the mam′ma,** fibrous processes passing from the anterior layer of the superficial fascia to the integument and nipple, enclosing in their areolæ masses of fat. **S. lig′ament of odon′toid pro′cess,** band of fibres connecting odontoid process of axis with margin of foramen magnum. **S. lig′ament of the pe′nis,** fibrocellular fascia, of triangular shape, extending from the anterior part of the symphysis pubis to the corpus cavernosum, which it sustains. **S. lig′ament of pericar′dium,** name applied to process of fascia covering great vessels of thorax and fusing with deep cervical fascia. **S. lig′ament of the spleen,** fold of peritoneum connecting the spleen with the diaphragm. **S. lig′aments of dia′phragm,** processes from prevertebral fascia to central tendon of diaphragm. **S. lig′aments of duode′num,** strong, fibrous bands extending from right crus of diaphragm and tissue around cœliac axis to transverse portion of duodenum.

**Suspen′sum uri′næ.** Cloud suspended in the urine as it cools.



Patient suspended in apparatus.

**Suspira′tion** (*sub*, under, *spiro*, to breathe). Suspirium, sigh. A long, deep inspiration, taken to restore the due relation between the circulation and respiration, or to free one's self from an inconvenient sense of weight felt in the chest when much depressed.

**Suspira′tus.** Suspirium.

**Suspir′itus.** Suspirium.

**Suspir′ium.** Suspiration. **S. cardi′acum,** angina pectoris.

**Sustentac′ular.** Supporting. **S. fi′bres,** annular muscle of Müller.

**Sustentac′ulum** (*sub*, beneath, *teneo*, to hold). Support. **S. lie′nis,** fold of peritoneum extending from the diaphragm to the splenic flexure of the colon, indirectly supporting the spleen; ligamentum phrenocolicum. **S. ta′li,** see *Calcaneum*.

**Sustenta′tor.** Supporter. **S. clitor′idis,** erector clitoridis. **S. pe′nis,** erector penis. **S. rec′ti,** bands of unstriped muscular fibres passing from anterior surface of the coccyx to the rectum, including the rectococcygeus. **S. tu′nicæ muco′sæ,** thin stratum of muscle-fibres between the mucous membrane and internal sphincter of anus.

**Susurra′tion** (*susurro*, to murmur). Murmur. Whisper.

**Susur′rus.** The murmur heard in diseases of the heart, over aneurysmal tumors, etc. **S. au′rium,** tinnitus aurium.

**Sute′la.** Suture.

**Su′terberry.** Xanthoxylum fraxineum.

**Suto′rius** (*sutor*, a shoemaker). Sartorius.

**Sut′ton and Gull's disease′.** Arteriosclerosis.

**Sutu′ra.** Suture. **S. abdomina′lis,** gastrorrhaphy. **S. arcua′lis,** coronal suture. **S. biparieta′lis,** sagittal suture. **S. bregmatomastoide′a,** occipitomastoid suture. **S. clava′ta,** quilled suture. **S. corona′lis,** coronal suture. **S. cor′poris callo′si exter′na,** see *Raphe*. **S. cra′nii squamo′sa,** squamous suture. **S. cuta′nea,** raphe of palate. **S. denta′ta,** see *Suture*. **S. fronta′lis,** frontal suture. **S. frontoparieta′lis,** coronal suture. **S. harmo′nia** or **harmonia′lis,** see *Harmony*. **S. imperfec′ta Web′eri,** fine groove or suture on outer side of nasal process of superior maxillary bone. **S. incisi′va,** suture in the jaw during fetal life, extending from the incisive foramen to the septum between the alveoli of the lateral incisors and canines. **S. in′fraorbita′lis,** fine suture on orbital surface of superior maxillary bone. **S. in′fraorbita′lis transver′sa,** fine suture at times found running from s. infraorbitalis to lacrymal notch. **S. interendogna′thica,** suture formed between the palatine bones and between the palatine processes of the superior maxilla. **S. interparieta′lis,** sagittal suture. **S. juga′lis,** sagittal suture. **S. lambdoida′lis,** lambdoid suture. **S. lepidoi′des,** squamous suture. **S. limbo′sa,** see *Suture*. **S. longitudina′lis,** sagittal suture. **S. l. imperfec′ta,** s. imperfecta Weberi. **S. mastoide′a,** suture formed by union of occipital and mastoid processes of temporal bone. **S. mastoideosquamo′sa,** suture at times found on mastoid process of temporal bone. **S. mendo′sa,** squamous suture. **S. no′tha,** see *Suture*. **S. obelæ′a,** sagittal suture. **S. occipita′lis,** lambdoidal suture. **S. occipitomastoide′a,** occipitomastoid suture. **S. occipitoparieta′lis,** lambdoid suture. **S. os′sium spu′ria,** harmony. **S. palati′na,** s. interendognathica. **S. parieta′lis,** sagittal suture. **S. parietomastoide′a,** parietomastoid suture. **S. parietotempora′lis,** suture formed by junction of parietal and temporal bones. **S. petrobasila′ris,** suture formed by junction of petrous portion of temporal and basilar process of occipital bones. **S. petrosquamo′sa,** suture found at birth between petrous and squamous portions of the temporal bone. **S. pro′ræ,** lambdoid suture. **S. puncta′ta,** common suture. **S. pup′pis,** coronal suture. **S. rec′ta,** sagittal suture. **S. rhabdoi′des,** sagittal suture. **S. sagitta′lis,** suture between the parietal bones. **S. serra′ta,** see *Suture* and *Sagittal suture*. **S. sphe′noethmoida′lis,** formed by junction of sphenoid and ethmoid bones. **S. sphenoparieta′lis,** formed by junction of sphenoid and parietal bones. **S. sphenotempora′lis,** formed by junction of great wing of sphenoid and squamous portion of temporal bones. **S. sphenozygomat′ica,** formed by junction of sphenoid and malar bones. **S. spu′ria,** see *Suture*. **S. squamo′sa,** see *Suture*. **S. tempora′lis,** temporoparietal suture. **S. transver′sa os′sis occip′itis,** suture at times found separating upper from lower portion of squamous portion of occipital bone. **S. ve′ra,** see *Suture*. **S. wormia′na ante′rior,** lambdoid suture, upper portion. **S. w. poste′rior,** s. transversa ossis occipitis. **S. zygomaticofronta′lis,** formed by junction of malar and frontal bones. **S. zygomaticosphenoida′lis,** formed by junction of malar and orbital surface of great wing of sphenoid bones.

**Su′tural.** Relating to a suture. **S. lig′ament,** see *Ligament, sutural*.

**Sutura′tion.** Act of introducing sutures.

**Su′ture** (*suo*, to stitch). *Sutura*, sutela, dovetail joint. A kind of immovable articulation, in which the bones unite by means of serrated edges dovetailed into each other. The articulations of the greater part of the bones of the skull are of this kind. The coronal, lambdoid, and sagittal sutures are called true sutures, *suturæ veræ;* the two temporal are called false sutures, *suturæ nothæ* or *spuriæ* or *squamosæ*. A dentated suture—*sutura dentata*—is one in which the processes are long and dentiform, as in the interparietal suture. In a serrated suture—*sutura* or *syntaxis serrata*—the indentations and processes are small and fine, like the teeth of a saw, as in the suture between the two portions of the frontal bone. In the *sutura limbosa* there is, along with the dentated margins, a degree of bevelling of one, so that one bone rests on the other, as in the occipitoparietal suture.

Suture, in surgery, *stitch*, is an operation consisting in stitching together the lips of a wound to favor union. Union obtained by means of adhesive plaster simply has been termed sutura sicca or dry suture, in opposition to the sutura cruenta or suture properly so called. The chief sutures are the interrupted suture, the quilled suture, the glover's suture, and the twisted suture.

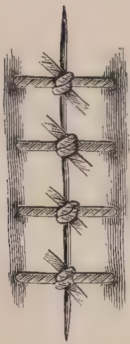
The Interrupted Suture is formed by passing a needle, armed with a ligature, through the lips of the wound previously brought into contact and tying or twisting the extremities of the thread. The other stitches are made in the same manner. They are separate or interrupted.

The Quilled Suture, *sutura clavata, compound suture*, is merely the interrupted suture when the ligatures are not tied over the face of the wound, but over two quills or rolls of plasters, or bougies, laid along the sides of the wound. It is used by some on account of the less danger of the stitches tearing out, but is not much employed. The *clamp suture* of Sims is a modification of this. It is formed by two cylinders of silver or lead, perforated at several points for the passage of small pieces of fine silver wire, prevented from slipping by perforated shot carried down upon them, pressed against the cylinders, and kept in place by being pinched with pliers. The *button suture* is another modification. In this the threads are passed through disks perforated like a button and tied; the broad surfaces of the disk prevent cutting of the tissues by the suture. In the *shotted suture* perforated shot are used for purposes of compression in connection with wires and a metal bar through which a hole is drilled for the passage of the wires, or perforated shot are run over ends of wire and then clamped.

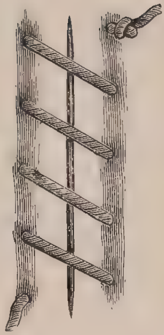
The Glover's Suture, *continued* or *uninterrupted suture, Bell's suture*. Executed by introducing the needle first into one lip of the wound from within outward, then into the other in the same way.

The Royal Stitch or Suture is the name of an old operation for the cure of bubonocele. It consisted in putting a ligature under the hernial sac, close to the abdominal ring, and tying that part of the sac, so as to render it impervious by the adhesive inflammation thus excited.

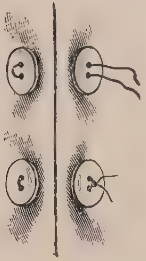
The Staple Suture consisted of a piece of steel wire shaped like a staple, the ends of which were ground to a triangular or glover's point. In using it the points of the staple were brought through both margins of the wound, and then bent back.



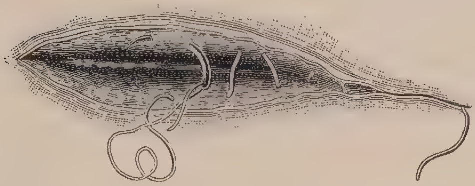
Interrupted suture. (Park.)



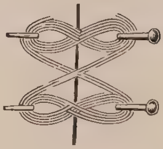
Continued or glovers' suture. (Park.)



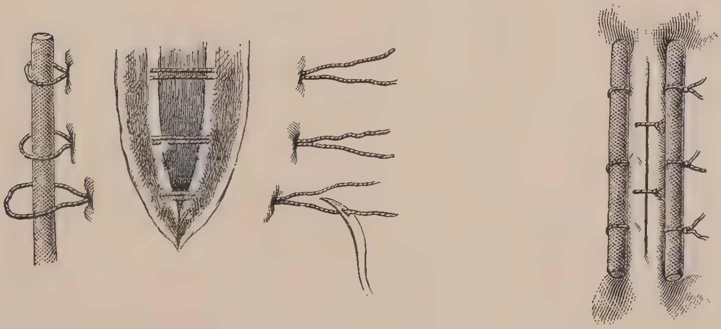
Button suture. (Smith.)



Subcuticular suture.



Twisted or hare-lip suture.



Quilled suture. (Smith.)

The Twisted Suture is employed chiefly to unite wounds of the cheeks and of the free edges of the lips. To perform it a pin or needle is passed through the edges of the wound, so as to keep them thoroughly in contact. A piece of thread is then wound accurately around the pin, from one side of the division to the other, in the form of the figure 8. Delicate rings of india-rubber have been substituted for the figure-of-8 turns, especially after ovariotomy. This form of suture is then called the *india-rubber suture*. The number of pins must, of course, correspond with the extent of the wound. This is the suture used in cases of harelip.

The Implanted Suture is formed by pins arranged parallel to the edges of the wound and implanted in their substance. By means of threads the needles are approximated so as to bring the edges of the wound together.

The Plastic Suture of Prof. Joseph Pancoast is a suture by tongue and groove. The groove is made by an incision in the part which is to receive the flap. The tongue is made on the flap by bevelling off the two surfaces, cuticular and adipose. The suture is made by passing a loop of thread, by two punctures, deep through the inner lip of the groove. The two needles are passed through the base of the tongue, and again through the outer lip of the groove. The two ends of the thread are then tied over a small roll of adhesive plaster, by which the tongue is, of necessity, forced deep into the groove. Four raw surfaces are thus firmly held in connection, making the union of parts, by this suture, a very certain process.

Intestinal Sutures. Various sutures have been proposed for union of the intestines in wounds thereof, as the *suture of the four masters*, in which both ends of the intestines are stitched on a piece of the windpipe of some animal or on a cylinder of cardboard oiled; the *suture of Ramdohr*, with ensheathing or invagination of the upper into the lower part of the intestine; the *suture of Bertrandi*, which differs only from the continued suture in the ligature being passed through, not over, the margins of the solution of continuity; *Czerny's s.*, in which the thread passes through the mucosa only; the *suture of Jobert*, which is made by introducing the needle on the serous surface of the viscus, passing under the serous coat, and bringing the point out upon the serous surface again; this same process is then repeated inversely on the other side, so that when the suture ends are tied two flat, serous surfaces are brought into contact; the *Czerny-Lembert suture* is this suture with the addition of a single row of separate sutures uniting the cut edges of mucous membrane. In *Gély's suture* two needles are inserted near the angle of the wound, then carried along the interior of the bowel, parallel with the wound, for the sixth of an inch, and brought out precisely at the same level; the threads are then crossed, each needle being passed through the puncture made by the other. *Appolito's suture* is made by using a needle with double thread, passing through all the coats of intestine, making the thread appear in transverse direction to the wound from the outside, longitudinal to the surface on the inside, and the process being repeated if necessary. In the *loop stitch of Le Dran* the edges of the wound are brought together, and as many needles, with unwaxed threads, used as there are to be stitches; each stitch is then made by passing a needle through the edges; all the ligatures belonging to one side of the wound are tied together and twisted so as to form a thread, which is fixed externally. *Cushing's suture* is a modification of that of Appolito; it is a right-angle continuous suture that passes through the serous and muscular coats, but avoids the mucous coat. *Connell's suture* is one employed in end-to-end anastomosis of the intestine; it includes all the coats of the bowel, the knots being left on the mucous surface within the lumen. **Anatom'ical s.**, see first definition under the prime. **Antisep'tic s.**, one made with aseptic material. **Appoli'to's s.**, see *Suture, intestinal* (above). **Approxima'tion s.**, s. applied to approximate the deeper parts of the wound. **Apposi'tion s.**, an approximation s. through skin only. **Bas'ilar s.**, s. between the basilar process of the occipital bone and the sphenoid. **Bas'tard s.**, see *Sutura notha*. **Béclard's' s.**, a s. with two threads of different colors. **Bell's s.**, see *Suture, glover's* (above). **S. of Bertran'di**, see *Suture, intestinal* (above). **Bipari'etal s.**, sagittal suture. **Bouisson's' s.**, a form of twisted suture for the intestine. **Boze'man's s.**, a button s. **Bur'ied s.**, approximation of the upper portions of a wound to cover up the parts below. **But'ton s.**, see *Suture, quilled* (above). **Cir'cular s.**, s. of the circumference of a part. **Clamp s.**, see *Suture, quilled* (above). **Clav'ate s.**, quilled s. **Coapta'tion s.**, s. for coaptation of the outer wound. **Cobb'ler's s.**, s. made by needle with two threads. **Com'pound s.**, see *Suture, quilled* (above). **Con'nell's s.**, see *Suture, intestinal* (above). **Contin'ued** or **Contin'uous s.**, the thread is carried backward and forward across the wound and tied at the beginning and end. **Coro'nal s.**, suture between the frontal and parietal bones. **Cush'ing's s.**, see *Suture, intestinal* (above). **Czer'ny's s.**, see *Suture, intestinal* (above); also a method of uniting a ruptured tendon by splitting one of the pieces longitudinally and attaching it by suture to the other piece. **Czer'ny-Lem'bert s.**, see *Suture, intestinal* (above). **Den'tate s.**, irregular suture, as the interparietal one. **Dry s.**, suture made by adhesive strips applied to the borders of the wound, the edges of the plaster being sutured. **Dupuytren's' s.**, see *Dupuytren*. **Duverger's' s.**, see *Duverger*. **Ethmofron'tal s.**, **Ethmolac'rymal s.**, **Ethmosphe'noid s.**, s. between the frontal, lacrymal, and sphenoid bones, respectively, and the ethmoid. **False s.**, see *Sutura notha*. **Figure-of-8 s.**, see *Suture, twisted* (above). **Fron'tal s.**, see *Frontal*. **Frontoma'lar s.**, s. between the frontal and malar bones. **Frontomax'illary s.**, s. between the frontal and superior maxillary bones. **Frontona'sal s.**, s. between the frontal and nasal bones. **Frontopari'etal s.**, coronal s. **Frontosphe'noid s.**, s. between the frontal bone and the alæ of the sphenoid. **Frontotem'poral s.**, s. between the temporal and frontal bones. **Gély's s.**, see *Suture, intestinal* (above). **Glov'er's s.**, see *Suture, glover's* (above). **Gus'senbauer's s.**, see *Gussenbauer*. **Hal'stead's s.**, see *Halstead*. **Harelip s.**, see *Harelip*. **Harmon'ic s.**, see *Harmony*. **Har'ris's s.**, see *Harris*. **Implant'ed s.**, tying together of pins passed parallel to each other on either side of the wound. **Intermax'illary s.**, s. between the superior maxillary bones. **Interna'sal s.**, s. between the nasal bones. **Interpari'etal s.**, sagittal s. **Interrupt'ed s.**, see under the prime. **S. of Jobert'**, see *Suture, intestinal* (above). **Ju'gal s.**, sagittal s. **Knot'ted s.**, interrupted suture. **Lace s.**, s. made with many fine threads. **Lamb'doid s.**, s. between the two parietal bones and the occipital. **Le Dran's' s.**, see *Suture, intestinal* (above). **Lefort's' s.**, see *Lefort*. **S. of Lem'bert**, see *Suture, intestinal* (above). **Longitu'dinal s.**, sagittal s. **Mat'tress s.**, a form of continuous suture backward and forward through the two lips of the wound. **Maxillolac'rymal s.**, union between the superior maxillary and lacrymal bones. **Metop'ic s.**, frontal s. **Nasomax'illary s.**, s. between the nasal and superior maxillary bones. **Occip'ital s.**, lambdoid s. **Occipitomas'toid s.**, s. between the occipital and mastoid bones. **Occipitopari'etal s.**, lambdoid s. **Pal'atine s.**, s. between the palate bones. **Parietomas'toid s.**, s. between the parietal and mastoid bones. **Perine'al s.**, perinæorrhaphy. **Petit's' s.**, see *Petit*. **Pe'tro-occip'ital s.**, s. between the occipital and petrous bones. **Petrosphe'noid s.**, s. between the petrous bone and the greater wing of the sphenoid. **Pin s.**, harelip s., twisted s. **Plas'tic s.**, see under the prime. **Quilled s.**, see under the prime. **Quilt'ed s.**, a form of mattress s. used in wounds of the intestines. **S. of Ram'dohr**, see *Suture, intestinal* (above). **Relaxa'tion s.**, tension s. **Reybard's' s.**, see *Reybard*. **Rob'inson's**

**s.**, see *Robinson*. **Roy′al s.**, see under the prime. **Saeng′er′s s.**, see *Saenger*. **Sag′ittal s.**, see *Sagittal*. **Shot′ted s.**, see *Suture, quilled*. **Sims′s s.**, see *Suture, quilled*. **Si′mon′s s.**, see *Simon*. **Sphenoma′lar s.**, s. between greater wing of the sphenoid and the malar bone. **Sphenopari′etal s.**, s. between the great wing of the sphenoid and the parietal bone. **Sphenotem′poral s.**, s. between the sphenoid and temporal bones. **Squamo′sal, Squa′mous,** or **Squamopari′etal s.**, s. between the parietal bone and the squamous portion of the temporal bone. **Squamosphe′noid s.**, s. between the great wing of the sphenoid and the squamous portion of the temporal bone. **Sta′ple s.**, see under the prime. **Subcutic′ular s.**, a stitch or suture applied just beneath the skin. **Tay′lor′s s.**, a cobbler′s s., used after amputation of the cervix uteri. **Ten′sion s.**, see *Tension*. **Tongue and groove s.**, plastic s. of Pancoast. **Transverse′ s.**, s. between the frontal bone and the bones of the face. **Twist′ed s.**, see under the prime. **Uninterrupt′ed s.**, see *Suture, glover′s*. **Wölf′ler′s s.**, see *Wölfler*.

**Suzanne′s′ gland.** Small mucous gland under the alveololingual sulcus of the mouth.

**Swab.** A piece of sponge, rag, or absorbent cotton tied to a rod of whalebone or wood, for cleansing the mouth of the sick or applying remedial agents to the pharynx and other parts; the process is termed swabbing.

**Swag′belly.** Physconia.

**Swa′ging.** The operation of stamping a metal plate between two dies.

**Swal′low.** Hirundo. **S. wort**, Asclepias vincetoxicum, A. tuberosa.

**Swal′lowing.** Deglutition.

**Swal′low′s nest.** Fossa deeply seated in the cerebellum near the uvula; nidus hirundinis.

**Swamp ap′ple.** Excrescence formed by parasites upon swamp azalea. **S. cab′bage**, Dracontium fœtidum. **S. dog-wood**, Petela trifoliata. **S. fe′ver**, malarial fever. **S. hel′lebore**, Veratrum viride. **S. itch**, scabies or pruritus; prairie itch. **S. lau′rel**, Kalmia glauca. **S. sas′safras**, Magnolia glauca. **S. sick′ness**, milk sickness. **S. su′mach**, Rhus venenata. **S. wood**, Cephalanthus occidentalis; Dirca palustris.

**Swan Al′ley sore.** See *Phagedenic chancre*.

**Swart′zia tomento′sa.** A tree of tropical America, the bark of which possesses sudorific properties.

**Sweam′ish.** See *Syncope*.

**Sweat.** Sudor. **Blood′y s.**, sudor cruentus. **Blue s., Red s.**, etc., see *Chromidrosis*. **S. canal′**, excretory duct from a sweat gland. **S. cen′tre**, supposed centre in the medulla oblongata which excites the excretion of sweat. **Colliq′uative s.**, see *Colliquative*. **S. glands**, see *Perspiration*. **S. pores**, see *Pore*. **S. root**, Polemonium reptans. **S. scab**, crusta genu equinæ. **S. ves′icle**, sudamina.

**Sweat′ing.** Ephidrosis; perspiring. Union of two metallic surfaces by fusion of the parts in contact. **S. of blood**, see *Diapedesis* and *Sudor cruentus*. **S. fe′ver**, s. sickness. **S. plant**, Eupatorium perfoliatum. **S. sick′ness**, miliary fever, with profuse sweating and an eruption of miliary vesicles; sudor anglicus. **S. sick′ness, Mal′wah**, disease having the features of the worst form of cholera and malignant congestive fever, which occurred in Malwah, India.

**Swe′diaur′s disease′.** Achillodynia.

**Swe′dish gymnas′tics, S. move′ments,** or **S. sys′tem.** System of active movements with massage, used in the treatment of diseases. **S. leech**, Hirudo medicinalis.

**Sweet al′mond.** Amygdala dulcis. **S. bal′sam**, Gnaphalium polycephalum. **S. ba′sil**, Ocinum basilicum. **S. bay**, Magnolia glauca. **S. birch**, Betula lenta, an American species of birch, containing a principle allied to amygdalin, which uniting with water forms an oil similar to that of gaultheria. **Bit′ter s.**, Solanum dulcamara; S. triosteum. **S. bread**, pancreas, thymus. **S. bush**, Comptonia asplenifolia. **S. cassa′va**, Jatropha manihot. **S. ci′cely**, Osmorrhiza longistylis. **S. clo′ver**, Trifolium melilotus. **S. fern**, Comptonia asplenifolia; Adiantum pedatum. **S. flag**, Acorus calamus. **S. gale**, Myrica gale. **S. gum**, liquidambar. **S. lau′rel**, Illicium floridanum. **S. mar′garum**, Origanum marjorana. **S. myr′tle**, Acorus calamus. **S. oil**, oleum olivæ. **S. or′ange-peel**, Citrus aurantium. **S. or′ange tree**, Citrus aurantium. **S. pep′per bush**, Clethira alnifolia. **S. pod**, Ceratonium siliqua. **S. pota′to**, root of Batata edulis. **S. prin′ciple of oils**, glycerin. **S. root**, Aralia nudicaulis. **S. sca′bious**, Erigeron canadense. **S. scent′ed gold′en rod**, solidago. **S. scent′ed life-everlast′ing**, Gnaphalium polycephalum. **S. scented shrub**, calycanthus. **S. scent′ed vir′gin′s bower**, Clematis flammula. **S. scent′ed wa′ter lily**, Nymphæa odorata. **S. sedge**, Acorus calamus. **S. sop**, edible fruit of Anona squamosa. **S. spirit of ni′tre**, spiritus ætheris nitrosi. **S. su′mach**, Rhus aromatica. **S. tinc′ture of rhu′barb**, tinctura rhei dulcis. **S. wood bark**, cascarilla.

**Swell′ing.** Tumefaction. Morbid increase in bulk in any part of the body. See *Tumor*. **Albu′minous s.**, cloudy s. **Cloud′y s.**, see *Cloudy*. **Crys′talline s.**, Sömmering′s s. **Glass′y s.**, a term applied to the external appearance presented by croupous membrane; also amyloid infiltration. **Söm′mering′s s.**, annular tumefaction of the capsule after the operation of extraction of the crystalline lens. **White s.**, hydrarthrus.

**Swer′tia chira′yita** (after Emanuel Swert, a Dutch botanist). Gentiana chirayita. **S. diffor′mis**, see *Calumba*. **S. fras′era**, see *Calumba*. **S. lu′tea**, Gentiana lutea.

**Swiete′nia febrif′uga** (after Van Swieten). A plant, ord. *Meliaceæ*, native of the East Indies; the bark, called rohena bark, is tonic and stomachic, and has been used in intermittents and diseases where bitter tonics are indicated; dose, gr. xx–xxx (1.3–2.0). **S. mahog′ani**, magohany tree of West Indies and tropical America, is possessed of tonic and febrifuge properties. **S. senegalen′sis**, khaya senegalensis, a common forest tree on the borders of the Gambia. The bark, called cailcedra and karson khayi, is bitter and antiperiodic.

**Swim** or **Swim′bladder.** Air-bladder.

**Swim′ming.** Natation. **S. blad′der**, air-bladder. **S. of the head**, vertigo.

**Swine diphthe′ria.** Pig typhoid, hog cholera; acute, frequently fatal, contagious, and epidemic disease of swine, accompanied by necrotic ulceration of the bowels and pneumonia. **S. erysip′elas**, contagious febrile disease of swine, with fever and red eruption on the neck and stomach. **S. fe′ver**, a term including various diseases of swine. **S. pest**, hog cholera; s. plague. **S. plague**, disease of hogs in which there is ulcerative gastroenteritis, caused by Bacillus suipestifer; the German form of the disease is characterized by caseous pneumonia and septicæmic infection, and is traceable to the Bacillus suisepticus. **S.-p. schi′zophyte** (Detmers), bacillus of swine plague. **S. pox**, see *Varicella*. **S. this′tle**, sonchus.

**Swiss tape′worm.** Bothriocephalus latus.

**Swoon.** Syncope.

**Swoon′ing.** Syncope.

**Sycami′num** or **Sycami′nus.** See *Morus nigra*.

**Sy′ce** (*syke*). Ficus; Ficus carica.

**Syceph′alus** (*syn*, with, *kephale*, head). A monster having two heads united together.

**Sy′cios angula′tus.** One-seeded star cucumber, wild bryony. The roots and seeds are bitter, purgative, and diuretic; used in dropsy in the same cases as bryony.

**Syco′ma.** Ficus. Wart-like growth on soft parts, as the tongue, genital organs, eyelids, etc.

**Sy′cose.** Saccharin.

**Syco′siform.** Resembling sycosis. **S. dermato′sis**, a rare skin affection, probably a tuberculous complication of ordinary sycosis, leaving an irregular scar.

**Syco′sis.** A tumor of the shape of a fig; also a fungous ulcer, the fungous growth resembling the pulp of the fig. Trachoma, formerly so called. Term applied to several skin diseases, as acne mentagra, lichen of the chin, follicular inflammation of the beard or other parts of the face. **Bacillog′enous s.**, a form of sycosis traceable to a bacillus. **S. bar′bæ,** s. non-parasitica, affects hairy parts of the face; lesions are papular, tubercular, or pustular, and perforated by hairs, the inflammation being perifollicular. **Cocco′genous s.**, form of sycosis due to invasion of the pilosebaceous crypt by pus cocci. **S. contagio′sa** or **parasit′ica,** tinea sycosis, tinea trichophytina barbæ, barber's itch; contagious follicular inflammation of hairy parts of the face and neck, caused by development of Trichophyton tonsurans. **S. frambœ′sia, S. frambœsiæfor′mis,** dermatitis papillaris capillitii. **Hyphog′enous s.**, a form of sycosis, as barber's itch, due to presence of Trichophyton barbæ. **Lu′poid s.**, ulerythema sycosiforme. **S. non-parasit′ica,** s. barbæ. **S. nu′chæ sclerot′isans,** sclerosing folliculitis of skin of nucha. **S. parasita′ria,** s. parasitica, tinea sycosis. **S. staphylog′enes,** sycosis. **S. tar′si,** blepharitis. **S. vulga′ris,** sycosis.

**Syd′enham's chore′a.** Ordinary chorea. **S.'s cough,** hysterical spasm of respiratory muscles. **S. laud′anum,** vinum opii.

**Syllab′ic speech** or **ut′terance.** Scanning speech with separation of syllables, noted in insular sclerosis.

**Syl′lable-stum′bling.** Difficulty in pronouncing many-syllabled words as a whole; a form of dysphasia.

**Syllepsiol′ogy** (*syllepsis,* conception, *logos,* a description). Syllepsology, the doctrine of conception.

**Syllep′sis.** Conception.

**Sylves′ter's meth′od.** Means of maintaining artificial respiration: 1. Place patient on back with pad between shoulders; 2, draw out tongue; 3, draw arms to side of head in extension for two seconds; 4, flex and adduct arms across chest, pressing firmly against the chest for two seconds; repeat.

**Syl′vian an′gle.** Angle formed by posterior part of fissure of Sylvius with a line perpendicular to upper border of hemisphere. **S. aq′ueduct,** aquæductus Sylvii. **S. ar′tery,** see *Cerebral arteries.* **S. fis′sure,** fissure of Sylvius. **S. fos′sa,** depression on external surface of cerebral hemispheres between arms of Sylvian fissure; it contains the island of Reil. **S. line,** line exhibiting the location of the Sylvian fissure; projected from a point three-quarters of an inch beneath the eminence of the parietal bone to the external angular process of the frontal. **S. point,** a point on the skull about 30 mm. behind the external angular process. **S. sul′cus,** s. fissure. **S. tract,** the portion of the brain bordering on the s. fissure. **S. val′ley,** s. fossa. **S. veins,** veins in Sylvian fissure, conveying blood to basilar vein. **S. ven′tricle,** the fifth ventricle of the brain.

**Sym-, Syn-** (*syn,* with, together). Like the Latin *cum,* a common prefix denoting with, together.

**Sym′bion** or **Sym′biont.** The living together of two animals or plants in harmony.

**Symbio′sis** (*syn,* with, *bioo,* to live). Coexistence of individuals or organisms.

**Symbiot′ic.** Parasitic.

**Symbleph′aron** or **Symblepharo′sis** (*syn,* together, *blepharon,* an eyelid). Preternatural adhesion between the eyelids, especially the upper eyelid, and globe of the eye. Ankyloblepharon.

**Sym′bol** (*symbolon,* a sign). Character. A sign or representation of something else. The following are the symbols commonly used in prescriptions:

℞, *Recipe,* see *R.*
gr., *Granum,* a grain.
gtt., *Gutta,* a drop.
℈, *Scrupulus* or *scrupulum,* a scruple.
ʒ, *Drachma,* a drachm.
℥, *Uncia,* an ounce.
℔, *Libra,* a pound.
♏, *Minimum,* a minim.
fʒ, *Fluidrachma,* a fluidrachm.
f℥, *Fluiduncia,* a fluidounce.
O, *Octarius,* a pint.
C, *Congius,* a gallon.

**Symbole,** sim′bo-le (*ballo,* to throw). Commissure.

**Sym′bolism.** Form of delusional insanity in which the patient interprets everything he sees as a symbol of his own feelings or notions. Sympathy.

**Sym′bolizing insan′ity.** Symbolism.

**Symbol′ogy** (*symbolon,* sign). Symptomatology.

**Sym′eles.** Symmeles.

**Syme's amputa′tion** or **opera′tion.** See *Amputation.*

**Sym′melus** (*syn,* with, *melos,* limb). Monopus. Monster whose extremities are joined together, the pelvis and lower limbs being imperfectly developed, with partial or entire fusion of the latter and twisting of the lower extremity in its various parts. Siren.

**Symmet′rical.** Epithet given to those parts of the body which, if seated on the median line, may be divided into two equal and similar halves; or which, if situated the one to the right, the other to the left of this line, have a similar conformation and a perfectly analogous arrangement. **S. gan′grene,** Raynaud's disease.

**Sym′metry** (*syn,* with, *metron,* measure). Regularity in form observed in many parts situated on the median line, and also the resemblance which exists between many organs situated on each side of the median line—*bilateral symmetry.* Bichat first noticed that this symmetry was confined to the organs of animal life, as the head, brain, spine, organs of sense, locomotion, etc. It has been affirmed to be a law of the animal economy that, owing to symmetry of nutrition, when uninfluenced by disturbing agents, all general or constitutional diseases affect equally and similarly the corresponding parts of the two sides of the body. This has been called the *symmetry of diseases,* and the resulting diseases are said to be symmetrical.

**Sympathec′tomy.** Excision of a part of the sympathetic nerve.

**Sympatheoneuri′tis** (*neuron,* nerve). Inflammation of the sympathetic nerve.

**Sympathet′ic.** Depending on sympathy. Sympathetic affections of an organ are those morbid phenomena that supervene without any morbific cause, acting directly and by the reaction of another organ primarily affected. Thus, itching of the nose is a sympathetic affection, produced by irritation in the intestinal canal. **S. an′thrax,** black-leg, quarter-evil; disease of cattle caused by motile, rod-shaped microorganisms; usually fatal; causes tumor of the extremities from hemorrhagic effusion. **S. bu′bo,** see *Bubo, simple.* **S. gan′glia,** see *Trisplanchnic nerve.* **Great s.**, trisplanchnic nerve. **S. inflamma′tion,** inflammation of any part or organ, occurring as if by sympathy with a similar morbid condition in any other part or organ. **S. insan′ity,** mental aberration occurring in sympathy with the disease of some other organ not physiologically associated with the brain. **Mid′dle s.**, pneumogastric. **Mi′nor s.**, facial nerve. **S. nerve,** trisplanchnic nerve. **S. ophthal′mia,** inflammation of a sound eye following injury or disease of its fellow. **S. pow′der,** pulvis sympatheticus, or powder of sympathy, of Sir Kenelme Digby; composed of calcined sulphate of iron prepared in a particular manner; long supposed to be able to cure a wound if applied to the weapon that inflicted it, or even to a portion of the bloody clothes. **S. sali′va,** that produced by the irritation of a sympathetic nerve. **S. vom′iting** or **morn′ing sick′ness,** that sometimes seen in the husband of a pregnant woman.

**Sympathet′iconeuri′tis.** Sympatheoneuritis.

**Sympatheticoparalyt′ic.** Relating to or caused by paralysis of the sympathetic, as *s. headache* or migraine.

**Sympatheticoton′ic.** Caused by tonic contraction of the arteries from overaction of sympathetic nerve.

**Sympatheticotrip′sy.** Crushing of the superior cervical ganglion for therapeutic purposes.

**Sympath′ic.** Sympathetic.

**Sym′pathizer.** Term applied to an eye which is affected sympathetically by a morbid condition which affects the other eye.

**Sym′pathy** (*syn*, with, *pathos*, suffering). Connection existing between the action of two or more organs more or less distant from each other, so that the affection of the first is transmitted secondarily to the others, or to one of the others, by means unknown. *Sympathy of continuity* is seen in the case of a continuous membrane, as in the action of demulcents in catarrh; *sympathy of contiguity* in the case of parts that are near, as in the action of aloes in amenorrhœa; and *remote sympathy* concerns organs that are at a distance from the part impressed. **Cure by s.,** mode of treatment, at one time prevalent, based on the idea that a mysterious consent exists between parts of the body and certain remedial agents.

**Sympep′sis** (*syn*, with, *pepsis*, coction, digestion). Coction.

**Sympex′is.** Concretion, as occasionally met with in the blood-vessels of some of the glands of the body.

**Sym′phora, Symphore′ma,** or **Symphore′sis** (*syn*, with, *phero*, to carry). Congestion.

**Symphoret′ic.** Congested.

**Symphoricar′pus racemo′sus.** Snowberry; ord. *Caprifoliaceæ*. Root is tonic and astringent, and has been used in ague and by the Indians in syphilis.

**Sym′phorol.** Caffeine-sulphonic acid; nasrol. **S. lith′ium,** lithium caffeine sulphonate. **S. so′dium,** sodium caffeine sulphonate. **S. stron′tium,** strontium caffeine sulphonate.

**Symphyoceph′alus** (*syn*, together, *phyo*, to grow, *kephale*, head). Monstrosity in which twins are united by the head.

**Symphys′eal.** Relating to a symphysis, as of the pubis. **S. an′gle,** formed by union of the line of the lower border of the inferior maxillary bone and that from the point of the chin to the lower incisors.

**Symphyseot′omy** (*symphysis* + *tome*, incision). Synchondrotomy, Sigaultian operation or section. Operation of section of the symphysis pubis, performed with the view of augmenting the diameter of the pelvis to facilitate delivery in certain cases of faulty conformation of that cavity, with wedging of the head of the child therein. As soon as the fibrous parts which hold the bones together are divided the latter separate to a certain distance from each other, and delivery may be accomplished.

**Symphys′ia** (*symphyo*, to grow together). A malformation consisting in the union of parts usually divided.

**Symphys′ion.** The central point of the external alveolar border of the inferior maxilla.

**Symphysiot′omy.** Symphyseotomy.

**Sym′physis** (*symphyo*, to grow together). Close union of bones; the bond of such union; the aggregate of means used for maintaining bones in situ in the articulations. It has, however, been more particularly appropriated to certain articulations, as to the symphysis pubis, sacro-iliac symphysis, etc. **S. cartilagin′ea,** synchondrosis. **S. of jaw,** s. menti. **S. ligamento′sa,** syndesmosis. **S. men′ti,** central line of the lower jaw where the two portions are joined by bony union. **Mus′cular s.,** syssarcosis. **S. pu′bis,** pubic articulation. **S. sacrococcyge′a,** articulation between the sacrum and coccyx. **S. sacro-ili′aca,** articulation between the sacrum and ilium on each side.

**Symphysodactyl′ia** (*symphysis*, growing together, *daktylos*, finger). Abnormal union of the fingers.

**Symphysop′sia** (*ops*, eye). Fusion of the two eyes into one, occurring in a monster.

**Symphysoske′lia** (*skelos*, leg). Siren. Monster with fusion of the lower extremities.

**Symphysot′omy.** Symphyseotomy.

**Sym′phytos** (*symphytos*, grown or produced with). Hereditary.

**Sym′phytum.** S. officinale or album or bohemicum, Consolida major, comfrey, ord. *Boraginaceæ*. The roots of this European plant are very mucilaginous, and are employed as emollients, in decoction, in hæmoptysis, dysentery, chronic diarrhœa, etc. Also Solidago virgaurea. **S. min′imum,** bellis. **S. mi′nus,** prunella. **S. petræ′um,** Coris monspeliensis, Montpelier coris; an intensely bitter and nauseous plant, said to have been useful in syphilis. See also *Sanicula*.

**Sympie′sis** (*syn*, together, *piesis*, pressing). A squeezing together of parts.

**Sympiesom′eter** (*sympiesis* + *metron*, measure). Instrument for measuring pressure.

**Symplocar′pus angustispath′a.** Dracontium angustispatha. **S. fœ′tidus,** Dracontium fœtidum.

**Sympo′dia** (*syn*, together, *pous*, foot). Sympus, siren.

**Symp′tom** (*syn*, with, *pipto*, to fall). Any change perceptible to the senses in any organ or function, connected with morbific influence. The term *symptoms of symptoms* has been used for the effects which result from the symptoms of a disease, which effects are not essentially connected with the disease itself. Thus, the debility arising from the frequency of evacuations in dysentery is a symptom of symptoms. Symptom at one time was generally used in the same sense as sign, but the former signifies a functional or vital phenomenon of disease, while the latter is applied to that which is more directly physical; hence the expressions functional or vital phenomena or symptoms, in contradistinction to the physical signs afforded by auscultation, percussion, etc. See *Sign*. **Abadie's′ s., Biernac′ki's s.,** etc., see these names. **S.-com′plex,** aggregation of symptoms. **Constitu′tional s.,** s, caused by the action of a disease on the body generally. **Delayed′ s.,** s. showing late appearance of shock. **Gen′eral s.,** constitutional s. **S.-group′ing,** aggregation of symptoms. **Lo′cal s.,** s. of concentration of disease in a special part of the body. **Objec′tive s.,** s. noticed by the physician, while one noticed only by the patient is called *subjective s.* **Ra′tional s.,** subjective s. **Sig′nal s.,** aura preceding an attack of Jacksonian epilepsy. **Subjec′tive s.,** see *Objective s.*

**Symptomat′ic.** Relating to symptoms or signs; that which is a symptom of some other affection; a *symptomatic fever*. **S. an′thrax,** a disease of cattle caused by the bacillus of symptomatic anthrax.

**Symptomatog′raphy** (*graphe*, description). Semeiography.

**Symptomatol′ogy** (*logos*, treatise). The branch of pathology the object of which is the observation and interpretation of symptoms.

**Symptomiat′ria** (*symptom* + *iatreia*, healing). Homœopathy.

**Sympto′sis** (*syn*, with, *pipto*, to fall). Gradual emaciation or atrophy, either of the whole body or of a part.

**Sym′pus.** Sympodia. Monster in which there is coalescence of the lower extremities and one foot recognizable, *sympus monopus;* if there is entire absence of feet it is called *sympus apus*. (See cuts on p. 1083.)

**Syn-.** As a prefix, with.

**Synadel′phus** (*syn*, together, *adelphos*, brother). A double monster, having a single pelvis and four legs.

**Synæ′rema** (*synairema*). Corrugation.

**Synæsthe′sia** (*syn*, together, *aisthesis*, sensation). Location of a sensation at one part of the body when a distant part is irritated.

**Synæ′tion** (*syn*, with, *aitia*, cause). A cause which cooperates with another in the production of disease.

**Synal′gia** (*syn*, with, *algos*, pain). Pain felt in part of body distant from part injured or irritated.

**Synal′gic.** Relating to or characterized by synalgia, as *synalgic keratitis*.

**Synanastomo′sis.** The union of several vessels.

**Synanthe′ma** (*syn*, with, *antheo*, to blossom). A collection of simple lesions of the skin producing a local eruption.

**Synaphymeni′tis** (*synaphe*, conjunction, *hymen*, membrane). Conjunctivitis.

**Synap′tase** (*syn*, with, *apto*, to join). A ferment found in the pulp of bitter almonds. Also an emulsion.

**Synarthro′dia.** Synarthrosis.

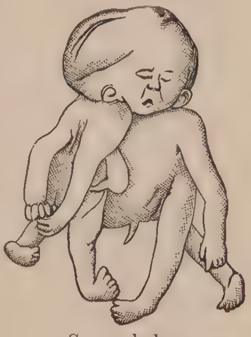
**Synarthro′dial.** Belonging to synarthrosis, as synarthrodial articulation. **S. diarthro′sis,** amphiarthrosis, joint with fibrocartilaginous or fibrous tissue between the bones, or joint with short ligaments, but without fibrous or fibrocartilaginous tissue between the bones.

**Synarthro′sis** (*syn*, with, *arthrosis*, articulation). Immovable articulation. Synarthrosis includes three species—suture, harmony, and gomphosis. See *Articulations*.

**Synathroïs′mus** (*syn*, together, *athroo*, to collect). Congestion.

**Syncan′thus** (*kanthus*, corner of the eye). Morbid adhesion between the eyeball and the orbit.

**Synceph′alus** (*kephale*, head). Double monster with fused heads.



Syncephalus.

**Syncheil′ia.** Synchilia.

**Syncheiral,** sin-ki′ral (*syn*, together, *cheir*, hand). Term used to denote movement in animals when both of a pair of feet are moved together.

**Synchilia,** sin-kil′e-ah (*syn*, together, *cheilos*, lip). Atresia of the lips.

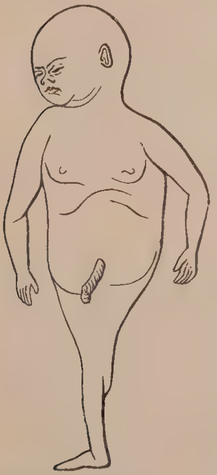
**Synchiton,** sin′kit-on (*chiton*, coat). Conjunctiva.

**Synchondro′sis** (*chondros*, cartilage). Articulation of bones by means of cartilages, as the articulations of the ribs with the sternum, by means of their cartilages of prolongation. **S. sacrococcyge′a,** that between the sacrum and coccyx.

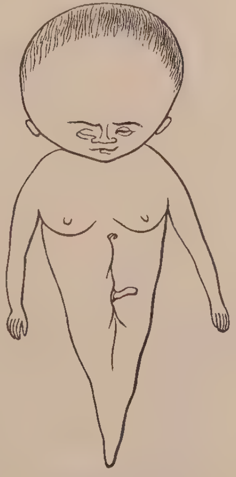
**Synchondrot′omy** (*synchondrosis* + *tome*, incision). Division of interosseous cartilage, as of the symphysis pubis. Symphyseotomy.

**Synchron′ical.** Synchronous.

**Syn′chronism.** State of being synchronous.



Sympus monopus. (Forster.)



Sympus apus. (Forster.)

**Syn′chronous** (*syn*, together, *chronos*, time). Isochronous. Occurring at the same time; thus the pulsations of an artery are synchronous with those of the heart.

**Syn′chysis** (*syn*, together, *chyo*, to pour). Confusio. **S. scin′tillans** or **spark′ling s.,** softening of the vitreous, the presence in which of cholesterin particles gives a scintillating appearance on ophthalmoscopic examination.

**Synchytophlo′gia** (*synchysis*, mixing, *phlego*, to burn). An old term for confluent smallpox.

**Syn′ciput.** Sinciput.

**Synclei′sis** (*cleio*, to close). Occlusion

**Syncli′nal** (*klino*, to slant). Inclining toward each other.

**Syn′clisis.** Synclitism.

**Synclit′ic.** Relating to synclitism.

**Syn′clitism** (*syn*, together, *klitos*, inclined). Parallelism of the plane of the child's head, in a natural presentation, with the planes of the pelvis and vagina.

**Synclone′sis.** Synclonus.

**Syn′clonus** (*synkloneo*, to shake together). Tremulous, simultaneous, and chronic agitation of various muscles, especially when excited by the will; clonus; also general spasm. **S. ballis′mus,** paralysis agitans. **S. beriber′ia,** beriberi. **S. chore′a,** chorea. **S. in′dicus,** beriberi. **S. rapha′nia,** raphania. **S. sal′tans,** chorea. **S. trem′or,** paralysis agitans; tremor.

**Syn′copal.** Relating to syncope, as syncopal fever, a pernicious intermittent characterized by repeated attacks of syncope.

**Syn′cope** (*syn*, together, *kopto*, to fall). Swoon, fainting. Complete and commonly sudden loss of sensation and motion, with considerable diminution or entire suspension of the pulsations of the heart and the respiratory movements. Syncope is not always, indeed not often, an affection of consequence, but sometimes it is an index of a diseased heart. Placing the patient in the horizontal posture, loosening the clothing, sprinkling cold water over the face, and the application of volatile substances to the nose are required during the attack. An approach to this condition is termed faintness, faintishness, and the person is said to be faint. **S. an′gens** or **angino′sa,** angina pectoris. **Laryn′geal s.,** laryngeal vertigo.

**Syncop′ic** or **Syncop′tic.** Syncopal.

**Syncra′nius** (*syn*, with, *kranion*, skull). Superior maxilla.

**Syn′cretism** (*synkretizo*, to combine). Blending.

**Syn′crisis** (*synkrino*, to put together). Coagulation of liquids.

**Syncrit′ica.** Medicines esteemed proper for inspissating the humors.

**Syncytial,** sin-sish′al (*kytos*, cell). Relating to or forming a syncytium, as *s. segmentation* of ovum.

**Syncytio′ma.** Tumor made up of syncytial tissue. **S. malig′num,** deciduoma malignum.

**Syncytiotoxin′.** A cytotoxin acting specifically upon the cells of the syncytium.

**Syncyt′ium.** A quasi-tissue formed of an aggregation of cells with ill-defined limits and large nuclei. A term applied to the external layer of the placenta, a thin, epithelial membrane between the villi of the chorion and the decidua. A multinucleate cell.

**Syndac′tylism.** Condition in which the fingers are not separated from one another.

**Syndac′tylus** (*syn*, together, *daktylos*, finger). A monster whose fingers are not separated from one another.

**Syndec′tomy** (*syndeo*, to bind together, *tome*, excision). Peritomy, circumcision of the cornea. An operation designed to cut off the supply of blood from the cornea by a division and part removal not only of the conjunctival, but also of the subconjunctival vessels. It is resorted to in pannus.

**Syndel′phus.** Synadelphus.

**Syndesmecto′pia** (*syndemos*, ligament, *ektopos*, out of place). Displacement of ligament.

**Syndesmi′tis** (*syndesmos*, ligament). Inflammation of articular ligaments.

**Syndesmoarytenoide′us** (*syndesmos*, ligament). Anomalous variety of lateral cricoarytenoid muscle arising from a tendon in common with the inferior cricoarytenoid.

**Syndesmog′raphy** (*syndesmos*, ligament, *graphe*, description). The part of anatomy which describes the ligaments.

**Syndesmol′ogy** (*syndesmos*, ligament, *logos*, treatise). Anatomy of the ligaments.

**Syndesmo′ma.** Neoplasm having a large amount of connective tissue.

**Syndes′mo-odon′toid articula′tion.** The part of the atloaxoid articulation between the anterior surface of the transverse ligament of the atlas and the back of the odontoid process of the axis.

**Syndesmopharynge′us.** A fasciculus of the constrictor pharyngis superior.

**Syndesmo′sis.** The articulation of two or more bones by means of ligament, as of the radius with the ulna.

**Syndesmothyroide′us.** Muscle formed by union of superior and inferior portions of the thyroarytenoid, inserted into the vocal cords.

**Syndesmot′omy** (*temno*, to cut). Dissection or division of ligaments.

**Syn′drome** (*syn*, with, *dromos*, course). The aggregate of symptoms of any disease. **Brown-Séquard's s., Erb's s., Stokes-Adams s.**, etc., see the proper names.

**Syndyas′mus** (*syn*, together, *dyo*, two). Coition.

**Syneches**, sin′ek-ees. Continued fever.

**Synechia**, sin-ek′-e-ah (*syn*, with, *echo*, to hold). Adhesion between the iris and transparent cornea, or between the iris and crystalline lens. The former is called *synechia anterior;* the latter, *s. posterior*, ptosis diplopia. If exudations of plastic lymph from the edge of the pupil are thrown out, so as to fringe the whole circumference, tying it down to the capsule of the lens, the centre of the pupil remaining clear, the condition is called *circular* or *annular s.* or exclusion of the pupil. When the entire surface of the iris adheres to the lens the condition is called *total s.* When the pupil is occluded by a thick nodule of exudation it is called occlusion of the pupil.

**Synechotomy**, sin-e-kot′o-me. Operation of incising or dividing a synechia.

**Synecten′terotome.** A form of enterotome.

**Synenceph′alus.** Double monster with fused heads.

**Syner′gic.** Working together, as muscles, etc.

**Syn′ergist.** Remedy acting to assist another.

**Syn′ergy** (*syn*, with, *ergon*, work). A correlation or concourse of action between different organs, structures, or remedies.

**Syn′esis.** Intellect.

**Syneuro′sis** (*syn*, with, *neuron*, sinew). See *Syndesmosis.*

**Syn′gamus trachea′lis.** Nematode worm found in the trachea of birds.

**Syngen′esis** (*syn*, together, *genesis*, production). The theory that every germ includes within itself germs of all future generations that may follow from it.

**Syn′genic** (*syn*, with, *gennao*, to beget). Congenital.

**Syngig′noscism** (*syn*, with, *gignosko*, to know). Hypnotism.

**Synhymen′sis.** Synymensis.

**Synidro′sis** (*syn*, with, *hidros*, sweat). Concurrent sweating.

**Synize′sis** (*syn*, with, *izo*, to sit down). Closure or contraction of a canal or cavity, especially of the pupil; this is sometimes congenital, and sometimes supervenes on violent ophthalmia or on the operation for cataract. Those affected are completely blind, the iris having no central aperture. Relief may sometimes be obtained by making an opening in the iris. **S. pupil′læ**, see *Synizesis.*

**Synkine′sia, Synkine′sis** (*syn*, with, *kinesis*, movement). Associated movements of reflex origin. Involuntary movement of paralyzed parts excited reflexly by a similar movement in the corresponding non-paralyzed part.

**Synkinet′ic.** Relating to or caused by synkinesis.

**Synneuro′sis.** Syndesmosis.

**Synocha**, sin′o-kah (*synochos*, continual). Inflammatory or dynamic fever. General inflammation. A continued fever. **S. bilio′sa**, gastric fever; bilious fever. **S. catarrha′lis**, influenza. **S. ictero′des**, yellow fever. **S. milia′ria**, miliary fever. **S. rheumat′ica**, acute rheumatism. **S. vacci′na**, cowpox. **S. varicel′la**, varicella.

**Synochal**, sin′o-kal. Relating to or having the characters of synocha.

**Syn′ochus.** Synocha.

**Synophthal′mia** or **Synophthal′mus** (*syn*, together, *ophthalmos*, eye). Monstrosity in which there is one orbital cavity. Cyclopia.

**Synor′chism** (*syn*, together, *orchis*, testicle). State of fusion of the testicles.

**Synoscheos**, sin-os′ke-os (*syn*, with, *osche*, scrotum). Adhesion of the penis to the scrotum.

**Synosteog′raphy** (*syn*, with, *osteon*, a bone, *grapho*, to describe). The part of anatomy describing the joints.

**Synosteol′ogy** (*logos*, a treatise). Anatomy of the joints.

**Synos′teophyte** (*syn*, with, *osteon*, bone, *phyton*, growth). Congenital bony neoplasm.

**Synosteo′sis** (*syn*, with, *osteon*, bone). Synostosis. Union by means of bone.

**Synosteot′omy** (*syn*, with, *osteon*, bone, *tome*, incision). Dissection of or cutting into a joint.

**Synostol′ogy.** Synosteology.

**Synosto′sis.** Synosteosis. Bony union. Also the premature and abnormal obliteration of the sutures, causing deformity and irregularity of the human skull.

**Synostot′ic.** Relating to synostosis.

**Syno′tis** or **Syno′tus** (*syn*, together, *ous*, an ear). A monster, the face of which is represented only by two ears close together or a double median ear; a form of otocephalus.

**Synovec′tomy** (*ektome*, excision). Arthrectomy.

**Syno′via** (*syn*, with, *ovum*, an egg). A viscid fluid resembling the white of egg, excreted by the membranes surrounding the movable articulations. It consists of water, albumin, salts, and fat. Its use is to lubricate the joints and the sheaths in which tendons play.

**Syno′vial.** Relating to synovia. **S. bur′sæ**, bursæ mucosæ. **S. cap′sules**, see *Membrane.* **S. cysts** include dropsies and enlargements of synovial sheaths, as from localized pressure, under which bursæ may also be newly formed; cystic transformation and dilatation from follicular obstruction. **S. fim′briæ**, s. fringes, s. ligaments, s. folds. **S. flu′id**, synovia. **S. folds**, folds of synovial membrane found in large joints. **S. fringes**, projections of synovial membranes into joints. **S. glands**, Havers's glands; secretory fringes which float in the interior of the synovial capsules. **S. mem′branes**, see *Membrane.* **S. sheath**, bursa-like fold between tendons and neighboring bony points. **S. vil′li**, s. fringes.

**Synovin.′** A variety of mucin found in the synovial fluid.

**Synovip′arous crypts.** In-dippings of synovial membranes.

**Synovi′tis.** Inflammation of the synovial membrane. When it affects the bursæ it is sometimes called *bursitis.* When of strumous origin it is often accompanied with gelatiniform degeneration of the synovial membrane, constituting *arthritis gelatinosa.* **S. hyperplas′tica**, s. with villous outgrowths. **S. rheumat′ica** or **rheumatisma′lis**, acute rheumatism.

**Syn′tasis** (*syn*, with, *teino*, to stretch). Tension.

**Syntat′ic** (*syn*, with, *teino*, to stretch). Tonic.

**Syntax′is** (*syn*, with, *tasso*, to put in order). Articulation. Reduction. Taxis. See *Suture.*

**Syntecop′yra** (*syntexis*, wasting, *pyr*, fever). Hectic fever.

**Synteno′sis** (*syn*, with, *tenon*, tendon). A species of articulation in which two bones are joined by means of tendon, as the sesamoid bones with the toes, the patella with the tibia, etc.

**Syntere′sis** (*tereo*, to keep). Prophylaxis.

**Synteret′ic** or **Synteret′icus** (*synteretikos*). Prophylactic.

**Syntex′is.** Colliquation; wasting of the body.

**Synthe′na.** A species of epilepsy accompanied by cardialgia and tormina.

**Synther′mal** (*syn*, with, *therme*, heat). Of equal temperature; isothermal.

**Syn′thesis** (*syn*, with, *tithemi*, to place). Composition or putting together. A surgical operation consisting in uniting divided parts and approximating those separated or distant from each other. Synthesis of continuity means the union of the edges of a wound or the approximation of the extremities of a fractured bone. Synthesis of contiguity is the reduction of displaced organs, as in hernia and luxations. Also, in chemistry, the formation of a more complex body by the union of simpler bodies.

**Synthet′ic.** Pertaining to synthesis.

**Syn′thetism.** The aggregate of operations and means for reducing a fracture and maintaining it reduced, comprising extension, counterextension, coaptation, and bandaging.

**Syntonin′.** An acid albumin formed from myosin by the action of dilute acids.

**Syntox′oid.** See *Toxoid.*

**Syntrim′ma** or **Syntrip′sis** (*syn*, together, *tribo*, to rub). Comminution; trituration.

**Syn′trophus** (*syn*, with, *trepho*, to nourish). Term applied to a congenital disease.

**Syntrop′ic.** Turned in the same direction.

**Synulo′sis** (*ouloo*, to cicatrize). Cicatrization.

**Synulot′ic.** An agent favoring cicatrization.

**Synu′sia** (*synousia*). Coition.

**Synymen′sis** (*syn*, with, *hymen*, membrane). Union of bones by membrane, as in the case of the bones of the head in the fœtus; syndesmosis.

**Syphilel′cos** or **Syphilel′cus** (*syphilis* + *helkos*, an ulcer). Syphilitic ulceration; presence of a syphilitic chancre.

**Syphilelco′sis.** Process of syphilitic ulceration.

**Syphilico′ma** (*komeo*, to care for). Hospital for the treatment of syphilitics.

**Syph′ilide.** Syphiloderm. A cutaneous eruption of syphilitic origin. The following is a classification of the conditions included under this head (Cornil):

| | |
|---|---|
| 1. Erythematous syphilides (roseola). | Diffused;<br>Macular;<br>Papular. |
| 2. Papular syphilides. | Small papules (papular or papulo-granular syphilide);<br>Miliary syphilide;<br>Conical, lichen-like syphilide;<br>Large papules (patches of papulo-lenticular syphilide);<br>Papulo-tuberculous;<br>Papulo-squamous. |
| 3. Vesicular syphilides. | Varicelliform;<br>Eczemiform;<br>Herpetiform. |
| 4. Pustular syphilides. | Acneiform;<br>Impetiginous;<br>Ecthymatous (sometimes superficial and precocious, sometimes late and ulcerated)—ulcerous ecthyma. |
| 5. Bullous syphilides. | Pemphigus;<br>Rupia. |
| 6. Gummous and tubercular syphilides. | |

In this classification there is indicated the gradual passage of the superficial lesions of the early period of secondary symptoms, the roseola and the papules, into the deeper and later lesions of the second period, such as ecthyma, and finally into the rupia, tubercles, and gummata of the third period.

**Syphilidoch′thus** (*syphilis*+*ochthe*, rising ground) **dissemina′tus.** Tubercular syphilide. **S. ro′dens,** ulcerated syphilitic tubercle.

**Syphilidocolpi′tis** (*kolpos*, vagina). Syphilitic vaginitis.

**Syphilidog′raphy.** Syphilography.

**Syphilidol′ogy.** Syphilology.

**Syphilidoma′nia.** Syphilomania.

**Syphilidopho′bia.** Syphilophobia.

**Syphilidophthal′mia.** Syphilitic ophthalmia.

**Syphiline′** (*syphilis*). A term proposed for the supposed specific virus of syphilis.

**Syphili′num.** Homœopathic remedy said to consist of the virus of syphilis triturated with milk-sugar.

**Syphilion′thus** (*ionthos*, acne of puberty). Scaly, copper-colored eruption of the face, due to syphilis.

**Syphilipho′bia.** Syphilophobia.

**Syph′ilis.** Venereal disease, pox, French crust, French distemper. An infectious disease communicable by inoculation, infection occurring frequently, though by no means solely, during sexual intercourse. It generally makes its first appearance by a hard chancre, the latter being known as the primary or initial lesion, and there are other symptoms which are secondary or constitutional. These are a roseolar eruption, ulcers in the throat, copper-colored blotches on the skin, pains in the bones, nodes, etc.; the last are sometimes termed tertiary phenomena. Hence the terms *primary syphilis*, s. primigenia, *secondary syphilis*, s. secundaria, constitutional syphilis, and *tertiary syphilis*, s. inveterata, are applied to the disease according to the stage of the syphilitic infection. The specific microorganism of syphilis, the existence of which is assumed, has not yet been determined, although the discovery of such has several times been announced. Syphilis may be acquired or hereditary. Primary syphilis includes the primary incubation period from the time of infection to the appearance of the initial lesion, two to three weeks, but this may be a longer or shorter period; then comes a second period of incubation, of forty days or more, before the appearance of constitutional symptoms. During the primary stage the chancre occurs and the glands and lymphatics become indurated. In the second stage —secondary syphilis—constitutional symptoms are developed, as exhibited in lesions of the skin and mucous membranes (see *Syphilides*), affections of the eye and of the lymphatic glands. Tertiary syphilis does not occur frequently at the present day, on account of the successful treatment of the first and second stages. The tertiary symptoms are various ulcerations, gummatous, tubercular, and other conditions (see *Syphilides*), affections of the nervous system and the visceral organs. **S. cor′puscles,** microscopic bodies said to have been noticed by some observers in the blood of syphilitic patients. **E′quine s.,** a venereal disease of horses. **Extragen′ital s.,** syphilis following a chancre situated elsewhere than on the genitals. **S. hæmorrhag′ica neonato′rum,** a rare form of syphilis of the new-born, attended with hemorrhages. **S. heredita′ria,** hereditary syphilis, constitutional syphilis of the child, derived during fetal life from its parent. **S. in′dica,** framboesia. **S. ingen′ita,** hereditary syphilis. **S. innocen′tium** or **S. inson′tium,** s. of the innocent, s. acquired in other ways than by coitus. **S. invetera′ta,** tertiary s. **Pri′mary s.,** see *Syphilis.* **S. primigen′ia,** primary s. **Pseudo-s.,** a term given to ulcers or other affections resembling syphilis, but indeterminate in character, the symptoms being irregular in appearance, and usually yielding spontaneously or under the use of tonics, change of air, etc.; sivvens, radezyge, etc., have been referred to this head. **Sec′ondary s.,** see *Syphilis.* **Ter′tiary s.,** see *Syphilis.* **Vac′cinal s.,** vaccinosyphilis.

**Syphilis′mus.** Syphilis.

**Syphilit′ic.** Belonging or relating to or affected with syphilis. **S. fe′ver,** febrile manifestation of the first constitutional effects of syphilis.

**Syphiliza′tion.** Saturation of the system by inoculation with the matter of syphilis. It has been used as a curative procedure in syphilis, as well as a preventive of that disease, and in the treatment of other cachexiæ, as cancer.

**Syph′ilized.** Affected with syphilis.

**Syphiloce′lis** (*kelis*, stain). Syphilitic patch on the skin.

**Syphilocerebro′sis.** A syphilitic affection of the brain.

**Syph′iloderm** (*derma*, skin). Cutaneous eruption of a syphilitic character.

**Syphiloder′ma.** Syphiloderm. **S. bullo′sum,** a manifestation of syphilis significant of a cachectic condition in the syphilitic patient, there being elevations of epidermis, filled at first with cloudy serum, which is soon transformed into pus, often mingled with blood. **S. gummo′sum,** syphilitic eruption accompanied with gumma, a late or so-called tertiary manifestation of the disease. **In′fantile s.** may be hereditary or acquired, and may be of any of the recognized forms of syphilitic skin disease. **S. maculo′sum,** syphilitic skin disease occurring in macules, due to hyperæmia (erythematous syphilide and syphilitic roseola) or to anomalous distribution of pigment (pigmentary syphilide). **S. papulo′sum,** the type of all cutaneous lesions produced by syphilis. The papules are small acuminate and miliary, large acuminate, small or large and flat; in the palmar and plantar forms there may also be thickening, separation, staining, etc. **S. pustulo′sum,** generally due to infection with pus cocci; it occurs in similar varieties to s. papulosum, the lesion, of course, being different. **S. serpigino′sum,** see *S. tuberculosum.* **S. tuberculo′sum,** the lesions are multiple, flat, roundish nodules; when they assume a serpiginous character and distribution the disease is called *syphiloderma serpiginosum.* **S. vesiculo′sum,** very rare manifestation of syphilis.

**Syphiloder′matous.** Relating to a syphiloderm.

**Syphilogen′esis** or **Syphilogeny,** sif-il-oj′en-e (*gennao,* to generate). The origin or generation of syphilis.

**Syphilog′rapher** (*grapho,* to write). A writer on syphilis.

**Syphilog′raphy.** The literature of syphilis. A description of syphilis.

**Syph′iloid** (*eidos,* resemblance). Resembling syphilis.

**Syphilol′epis** (*lepis,* a scale). A scaly eruption due to syphilis. **S. gutta′ta,** papulosquamous eruption due to syphilis, looking like drops of water on the skin. **S. palma′ris,** papulosquamous syphilis occurring on the palms.

**Syphilol′ogist.** One having expert knowledge of syphilis, its symptoms, pathology, and treatment.

**Syphilol′ogy** (*logos,* discourse). The doctrine of syphilis and its management; a treatise on syphilis.

**Syphilo′ma.** A syphilitic tumor; gumma.

**Syphiloma′nia.** Noddle pox. Syphilophobia.

**Syphilon′thus.** Syphilionthus.

**Syphilop′athy** (*pathos,* suffering). Any syphilitic disease.

**Syphilophly′sis** (*phlysis,* eruption). Syphilitic eruption.

**Syphilopho′bia** (*phobos,* fear). Morbid dread of syphilis giving rise to fancied symptoms of the disease.

**Syphilophy′ma** (*phyma,* growth). A syphilitic growth.

**Syphilopsilo′ma** (*psilos,* bare). Syphilitic alopecia.

**Syphion′thus.** Syphilionthus.

**Syph′ite.** Somnambulism.

**Sy′phon.** See *Siphon.*

**Syphono′ma.** Cylindroma.

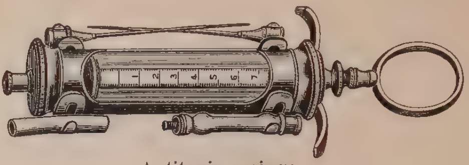
**Syr′iac ul′cer.** Diphtheria.

**Syrigmopho′nia** (*syrigmos,* piping, *phone,* voice). A shrill, piping voice.

**Syrig′mus** (*syrigmos,* piping). Tinnitus aurium.

**Syrin′ga** (*syrinx,* tube). Eustachian tube. Fistula. Syringe. Trachea. **S. clysmat′ica,** syringe (clyster). **S. vulga′ris,** common lilac; ord. *Oleaceæ.* The leaves and fruit are bitter and somewhat acrid, and have been used as tonics and antiperiodics.

**Syr′inge** (*syrinx,* a pipe). Apparatus through which any liquid is injected. **Anel′s′ s.,** see *Anel.* **Antitox′in s.,** a hypodermic s. with a large barrel. **Clys′ter s.,** a syringe for administering clysters. **Cup′ping s.,** artificial cupping apparatus. **Da′vidson′s s.,** see *Davidson.* **Foun′tain s.,** see *Fountain.* **Hypoder′mic s.,** a small syringe armed with a fine, hollow needle, for giving hypodermic injections. **Pravaz′s′ s.,** a hypodermic s.



Antitoxin syringe.

**Syrin′gic** (*syrinx,* fistula). Fistulous.

**Syringin′.** Glucoside obtained from Syringa vulgaris.

**Syringi′tis** (*syringa,* Eustachian tube). Inflammation of the Eustachian tube.

**Syrin′gocœle** (*syrinx,* tube, *koilia,* cavity). Central canal of the spinal cord.

**Syringocystadeno′ma.** Nodular tumor of skin or eyeball, whose contents, from cystoid degeneration, are of a glandular character.

**Syringo′des** (*syringodes,* like a pipe). Fistulous.

**Syringomenin′gocele** (*syrinx,* tube, *meninx,* membrane, *kele,* tumor). Congenital tumor consisting of the membranes and posterior wall of the dilated central canal of the spinal cord protruding through a defect in the vertebral arches.

**Syringomye′lia** (*syrinx,* tube, *myelos,* marrow). Condition produced by the presence of cavities in the substance of the spinal cord, marked by muscular atrophy, fibrillary twitchings, analgesia, rhagades, various dermatoses, and other sensory and trophic disturbances. **S. atroph′ica,** myelitis with formation of cavities in the spinal cord caused by disintegration of products of inflammation. Cavitary myelitis; syringomyelitis.

**Syringomyeli′tis.** Central myelitis producing softening and cavity-formation in the spinal cord.

**Syringomy′elocele** (*syrinx,* tube, *myelos,* marrow, *kele,* tumor). Tumor formed by protrusion of the posterior wall of the dilated central canal of the cord in cases of spina bifida.

**Syringomy′elus.** Condition of dilatation of the central canal of the spinal cord with hyperplasia of the neuroglia surrounding the central canal.

**Syrin′gotome** (*syrinx,* fistula, *tome,* incision). Instrument formerly used in the operation for fistula in ano. It is a bistoury concave at the edge, terminated by a long, flexible, probe-pointed stylet.

**Syringot′omy.** Incision of a fistula in ano.

**Syr′inx.** Eustachian tube. Fistula. Syringe. Trachea. **S. hi′era,** vertebral column.

**Syr′up** (Arabic, *sirup, sirab,* or *scharab,* a potion). Syrupus. Saturated solution of sugar in water, either simple or united with some vegetable or other principle. **Antiscorbu′tic s.,** cochlearia, buckbean, watercress, horseradish, cinnamon, and bitter orange steeped in white wine and sugar. **Aromat′ic s.,** compound syrup of mugwort, contains artemisia vulgaris, inula root, ligusticum levisticum, fennel, pennyroyal, catmint, savine, marjoram, hyssop, pyrethrum, rue, basil, aniseed, and cinnamon; tonic, emmenagogue, etc. **Balsam′ic s.,** syrupus tolutanus. **Coxe′s hive s.,** syrupus scillæ compositus. **Eas′ton′s s.,** syrupus ferri, quininæ et strychninæ phosphatum. **S. of five roots,** contains parsley, fennel, asparagus smallage, and butcher′s broom. **Hive s.,** syrupus scillæ compositus. **S. of mug′wort,** aromatic s. **Sim′ple s.,** syrupus, a solution of sugar in water.

**Syru′pus.** (Ph. U. S. and Br.) Simple syrup, a saturated solution of sugar in water. The following are the official syrups: **S. aca′ciæ** (U. S.), contains mucilage of acacia 25, syrup 75. **S. ac′idi cit′rici** (U. S.), contains 1 per cent. each of citric acid and spirit of lemon. **S. a. hydriod′ici** (U. S.), contains 1 per cent. of hydriodic acid; dose, ʒss–℥ss (2.0–16.0). **S. al′lii** (U. S.), syrup of garlic, made of fresh garlic and dilute acetic acid; dose, ʒj–ij (4.0–8.0). **S. althæ′æ** (U. S.), syrup of marshmallow. **S. amyg′dalæ** (U. S.), made from bitter almonds, 4 per cent., and sweet almonds, 14 per cent.; dose, ʒj–ij (4.0–8.0). **S. aromat′icus** (Br.), made of tincture of orange and cinnamon-water in syrup; dose, ʒss-j (2.0–4.0). **S. auran′tii** (U. S. and Br.), made from tincture of orange or from sweet orange-peel. **S. a. flo′ris** (Br.) or **flo′rum** (U. S.), made by dissolving sugar in orange-flower water. **S. cal′cii lactophospha′tis** (U. S. and Br.), made with calcium carbonate, lactic acid, and phosphoric acid; dose, ʒj–ij (4.0–8.0), containing gr. iss–iij (0.1–0.2) of lactophosphate of lime. **S. cal′cis** (U. S.), syrup of lime, containing about 6½ per cent. of lime; dose, ʒss–j (2.0–4.0). **S. cas′caræ aromat′icus** (Br.), elixir of cascara sagrada, containing liquid extract of cascara, cinnamon-water, tincture of orange, and alcohol; dose, ʒj–ij (4.0–8.0). **S. chlo′ral** (Br.), contains 10 grains to the drachm (0.65 in 4.0); dose, ʒss–ij (2.0–8.0). **S. codei′næ** (Br.), contains 2 grains to the ounce; dose, ʒss–ij (2.0–8.0). **S. fer′ri iod′idi** (U. S. and Br.), contains 10 per cent. of ferrous iodide; dose, ♏v–xxxx (0.32–2.0). **S. fer′ri phospha′tis** (Br.), contains one grain of ferrous phosphate to the drachm; dose, ʒss–j (2.0–4.0). **S. f. p. cum quini′na et strychni′na** (Br.) or **S. f. quini′næ et strychni′næ phospha′tum** (U. S.), syrup of the phosphates of iron, quinine, and strychnine, Easton's syrup, contains ferric phosphate, gr. 1⅛, quinine sulphate, gr. 1⅔; and strychnine, gr. $\frac{1}{85}$ to the drachm; dose, ʒj–ij (4.0–8.0). **S. gluco′si** (Br.), one part of glucose and two parts of syrup; used for making pill masses. **S. hemides′mi** (Br.), syrup of Indian sarsaparilla; dose, ʒss-j (2.0–4.0). **S. hypophosphi′tum** (U. S.), contains about 1 grain each of the hypophosphites of sodium and potassium, and 2½ grains of the hypophosphite of calcium to the drachm; dose, ʒj–℥ss (4.0–16.0). **S. h. cum fer′ro** (U. S.), contains ½ grain each of potassium citrate and ferrous lactate in a drachm of the preceding; dose, ʒj–℥ss (4.0–16.0). **S. ipecacuan′hæ** (U. S.), contains fluid extract of ipecac 7, acetic acid 1, in syrup 92; dose, ʒss-j (2.0–4.0) as an expectorant; ʒj–℥ss (4.0–16.0) as an emetic. **S. krame′riæ** (U. S.), syrup of rhatany or krameria, contains fluid extract of krameria 45, syrup 55; dose, ʒss-ij (2.0–8.0). **S. lactuca′rii** (U. S.), contains tincture of lactucarium 10, syrup 90; dose, ʒj–iij (4.0–12.0). **S. limo′nis** (Br.), made with lemon-juice and lemon-peel; dose, ʒss–j (2.0–4.0). **S. pi′cis liq′uidæ** (U. S.), syrup of tar; dose, ʒj–ij (4.0–8.0). **S. pru′ni virginian′æ** (U. S. and Br.), syrup of wild cherry; dose, ʒss–ij (2.0–8.0). **S. rhe′i** (U. S. and Br.), contains fluid extract of rhubarb 10, potassium carbonate 1, spirit of cinnamon 0.4, glycerin 5, syrup 83.6; dose, ʒss–℥ss (2.0–16.0). **S. rhœ′ados** (Br.), syrup of red poppy; dose, ʒj (4.0). **S. ro′sæ** (U. S. and Br.), made by adding fluid extract of rose, 12½ per cent., to syrup. **S. ru′bi** (U. S.), syrup of blackberry root; dose, ʒj–ij (4.0–8.0). **S. r. idæ′i** (U. S.), syrup of raspberry, made by dissolving sugar in fresh raspberry juice. **S. sarsaparil′læ compos′itus** (U. S.), compound syrup of sarsaparilla, contains fluid extracts of senna and licorice, each 1.5, fluid extract of sarsaparilla 20, syrup 77, flavored with wintergreen, sassafras, and anise. **S. scil′læ** (U. S. and Br.), syrup of squill, contains vinegar of squill 45, syrup 55; dose, ʒss–j (2.0–4.0). **S. s. compos′itus** (U. S.), hive syrup, contains antimony and potassium tartrate, each gr. ⅛, and fluid extracts of squill and of senna, each ♏v, in one drachm; dose, ♏x–ʒj (0.65–4.0). **S. sen′egæ** (U. S.), contains water of ammonia 0.5, fluid extract of senega 20, syrup 79.5; dose, ʒss–ij (2.0–8.0). **S. sen′næ** (U. S. and Br.), syrup of senna, flavored with oil of coriander; dose, ʒss-ij (2.0–8.0). **S. toluta′nus** (U. S. and Br.), contains about 1 per cent. balsam of tolu; dose, ʒss–j (2.0–4.0). **S. urgin′eæ** (Br.), syrup of Indian squill; dose, ʒss–j (2.0–4.0). **S. zingib′eris** (U. S. and Br.), contains 3 per cent. of fluid extract of ginger; dose, ʒss–j (2.0–4.0).

**Syspa′sia** (*syn*, with, *spao*, to draw). Clonic spasm with diminished sensibilty and inability of utterance. **S. convul′sio**, convulsion. **S. epilep′sia**, epilepsy. **S. hyster′ia**, hysteria.

**Syssarco′sis** (*syn*, with, *sarx*, flesh). Union of bones by means of muscles, such as the union of the os hyoides with the lower jaw of the scapula; the ribs, etc.

**Sysso′mus** (*syn*, together, *soma*, body). Independent double monster, having the trunks fused, but divided, and the heads separate.

**Systal′sis.** Systole.

**Systal′tic** (*syn*, together, *stello*, to contract). A systaltic motion is one in which there is alternate contraction and dilatation.

**Systat′ic** (*syn*, together, *istemi*, to place). Affecting several or all of the sensorial powers simultaneously.

**Sys′tem** (*syn*, together, *istemi*, to place). The collection and arrangement of different matters having an analogy to each other or working toward the same end. In natural history, a methodical arrangement of objects for the purpose of facilitating study. In anatomy, an assemblage of organs composed of the same tissues and intended for similar functions —for instance, the *nervous system, muscular system*, etc. **Associa′tion s., dosimet′ric s., kinesod′ic s.**, etc., see these words. **S. disease′** or **le′sion**, a disease or lesion, of the spinal cord particularly, involving homologous parts, as the posterior or lateral columns.

**Syste′ma.** System. **S. nervo′sum vegetati′vum**, sympathetic nervous system. **S. vaso′rum**, vascular system. **S. ve′næ por′tæ**, portal system.

**Systemat′ic.** According to a system; orderly.

**Sys′tematism.** A method according to which every fact of a science is collected around an opinion, true or false; one who reduces things to such a method is called a *systematist*.

**Sys′tematist.** See *Systematism*.

**Systematol′ogy** (*systema*, system, *logos*, a discourse). The doctrine of or a treatise on systems.

**System′ic.** Belonging to the general system, as systemic circulation in contradistinction to the pulmonic. **S. circula′tion**, the circulation of the entire body. **S. le′sion**, one confined to homologous parts, as the lateral or posterior columns of the spinal cord.

**Sys′temoid.** Term given to tumors made up of tissues resembling a system of organs.

**Systole**, sis′to-le (*syn*, together, *stello*, to contract). The movement of constriction or contraction of the heart to give impulse to the blood or to cause its progression; opposed to the diastole.

**Systol′ic.** Relating to the systole of the heart.

**Systolom′eter.** Instrument devised for determining the quality and force of cardiac murmurs.

**Systrem′ma** (*systremma*, anything twisted together). Cramp of muscles of the leg.

**Syzyg′ium.** Syzygy. **S. jambola′num**, jambol, a tree growing in the East Indies, having edible fruit and astringent bark; the seeds are used as a remedy in diabetes. **S. nervo′rum**, a pair of nerves.

**Syz′ygy.** Fusion of two bodies which still preserve their identity.

# T.

**T.** Abbreviation of *tension* and of *temperature.* Increased intraocular tension is denoted by T + 1, T+2, T+3, etc., and decreased tension by T—1, etc.; normal tension is usually indicated by Tn. **T-ban′dage,** a bandage shaped like the letter T, consisting of a strip of linen of variable length and breadth, the middle of which is attached at right angles to the extremity of another strip, also of variable length and breadth; when two such strips are attached at a distance from each other the bandage is called a double T; used principally for supporting the dressings after the operation for fistula in ano, in diseases of the perineum, groin, anus, etc. **T-fas′cia,** T-bandage. **T-fi′bre,** branch given off at right angles to the axis-cylinder of a multipolar nerve-cell.

**Tabaci′nus.** Color of tobacco—pale brown.

**Tabaco′sis.** Production of disease by the inhalation of tobacco dust.

**Taba′cum.** (Ph. U. S.) Dried leaves of Nicotiana tabacum or commercial tobacco. The emetic dose is gr. v–viij (0.32–0.5).

**Tab′anus.** A genus of flies, of which the horse-fly, *T. atratus,* is the best known species. **T. bovi′nus,** gadfly of cattle.

**Tabardil′lo.** An adynamic fever of South America, probably typhus.

**Tabatière anatomique** (Fr.), tab-at-e-air′ an-at-om-eek′ ("anatomical snuff-box"). Space at the root of the thumb, on the exterior of the wrist between the tendons of the extensor secundi internodii pollicis and the extensor primi; it contains the radial artery.

**Tabefac′tion** (*tabes,* wasting, *facio,* to make). Emaciation.

**Tab′efy.** To emaciate.

**Tabel′la.** Lozenge, tablet. A solid medicine composed of a powder, sugar, and mucilage. *Tabel′læ trinitri′ni,* official in the Ph. Br.; they are of chocolate, weighing 5 grains each, and contain gr. $\frac{1}{100}$ (0.00065) of nitroglycerin.

**Tabernæmonta′na u′tilis** (after Tabernæmontanus, a German botanist). A tree of British Guiana, called by the natives *hyahya,* the bark and pith of which yield a milk used as a refreshing drink.

**Ta′bes** (*tabeo,* to decay). Emaciation of the whole body, with general languor, hectic fever, and for the most part depressed spirits. Also tabes dorsalis. **At′rophy t.,** phthisis. **T. coxa′ria,** wasting from suppuration of the hip-joint. **T. diabet′ica,** peripheral neuritis occurring in diabetes mellitus. **T. dorsa′lis,** locomotor ataxia; see *Ataxia.* **T. d. spasmod′ica,** t. spasmodica. **T. dorsua′lis,** t. dorsalis. **T. glandula′ris,** scrofulous adenitis. **T. ischiad′ica, T. lac′tea,** atrophy of nursing women. **T. mesara′ica,** t. mesenterica. **T. mesenter′ica,** tuberculosis of the mesenteric glands, emaciation and general disorder of the nutritive functions in children. **T. nutri′cum,** atrophia lactantium. **T. os′sis sa′cri,** tabes dorsalis. **T. pecto′rea,** rachitis. **T. pulmona′lis,** phthisis pulmonalis. **T. scrofulo′sa,** t. mesenterica. **T. se′num,** marasmus senilis. **T. spasmod′ica,** spastic paraplegia from primary lateral sclerosis.

**Tabes′cence.** Emaciation.

**Tabes′cent.** Wasting; afflicted with tabes.

**Tabet′ic.** Belonging to or affected with tabes. **T. arthri′tis,** Charcot's joint disease; trophic changes in joints occurring in locomotor ataxia. **T. arthrop′athy,** t. arthritis. **T. foot,** flattening of the foot, accompanied by distortion of its bones, met with in locomotor ataxia. **T. neuri′tis,** degenerative changes in peripheral nerves, found in locomotor ataxia.

**Tabet′iform.** Resembling tabes.

**Tab′ic.** Relating to or affected with tabes.

**Tab′id.** Tabetic. Wasted by disease.

**Tab′idness.** Tabes.

**Tabif′ic** (*facio,* to make). Causing tabes or phthisis.

**Tabifica′tion.** Wasting; emaciation.

**Ta′ble.** A name given to the two plates of compact tissue which form the bones of the cranium. Of these, one is external, the other internal, the latter being called *tabula vitrea* on account of its brittleness.

**Tab′let.** A small lozenge, usually of sugar of milk, which has been rubbed up with some active medicament or on which has been dropped a definite dose of a remedy in fluid form. The former is a *t. trit′urate,* but the name is usually applied to both kinds of medicated sugar-of-milk lozenge.

**Tab′loid.** The trade name of a special manufacture of tablet triturate.

**Tab′ula.** Tabella; table. **T. vit′rea,** see *Table.*

**Tab′ular.** In the form of a table.

**Tac.** Influenza.

**Tac′a ocean′ica.** Tahiti arrowroot.

**Tacamaha′ca.** Fagara octandra. **T. carag′na** caranna.

**Tache,** tash (Fr.). Spot; blemish of the skin. **T. blanche,** white spots sometimes found on the surface of the liver at autopsy after death from acute infection. **T. bleuâtre′,** purplish spots on the skin, deeper than the rose spots and permanent, sometimes seen in typhoid fever; the cause is uncertain, and by some the spots are ascribed to insect bites. **T. cérébrale′,** meningitic streak. **T. laiteuse′,** milk spot. **T. méningéale′,** meningitic streak. **T. motrice′,** motor-nerve ending. **T. spinale′,** spinal bulla.

**Tach′iol.** Fluoride of silver, a powerful antiseptic said to possess but slight toxicity.

**Tachometer,** tak-om′e-ter. Hæmotachometer.

**Tachycardia,** tak-e-kar′de-ah (*tachys,* quick, *kardia,* heart). Rapid action of the heart. **Essen′tial t.,** t. due to a nervous affection of the heart. **Mechan′ical t.,** rapid heart action due to violent exercise. **Paroxys′mal t.,** essential t. recurring in attacks separated by intervals of normal cardiac action. **T. strumo′sa,** exophthalmic goitre.

**Tachyphra′sia** (*tachys,* quick, *phrasis,* speech). Great volubility in speech, sometimes a symptom of mental aberration.

**Tachypnœ′a** (*tachys,* rapid, *pneo,* to breathe). Rapid paroxysmal breathing.

**Tachythan′atous** (*tachys,* quick, *thanatos,* death). Speedily fatal.

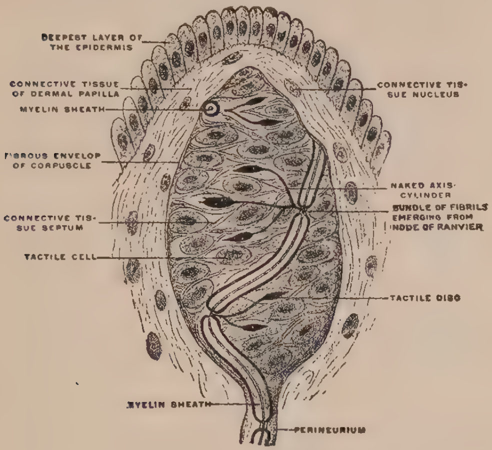
**Taciturn,** tas′e-turn (*taceo,* to be silent). Silent or reserved.

**Tacitur′nity** (*taceo,* to be silent). State of a person who does not speak. Morbid taciturnity sometimes exists as a symptom of the neuroses, especially of melancholy.

**Tact** (*tango,* to touch). A modification of the sense of touch. Passive judgment by the cutaneous nerves regarding bodies exterior to the skin. Tact is passive; touch, active.

**Tac′tile.** Relating or appertaining to tact or touch. **T. cells,** cells forming end-organs of nerves. **T. cen′tre,** hypothetical centre for the sensation of touch, placed in the hippocampal region of the brain. **T. cor′puscles,** small end-organs of nerves in the papillary layer of the skin and various mucous membranes. **T. disk,** termination of nerve between the cells of Grandry; found in the skin covering the bills of ducks and geese. **T. menis′ci,** expansion of the axis-cylinder of nerves applied to cells of deeper layers of the epidermis in parts endowed with special sensibility. **T. papil′læ,** papillæ of skin containing

t. corpuscles. **T. re'flexes,** reflex movements caused by excitation of the nerves of touch. **T. sensa'tion,** the sensation produced by a touch. **T. sense,** sense of touch.



DEEPEST LAYER OF THE EPIDERMIS
CONNECTIVE TISSUE OF DERMAL PAPILLA
MYELIN SHEATH
FIBROUS ENVELOP OF CORPUSCLE
CONNECTIVE TISSUE SEPTUM
TACTILE CELL
CONNECTIVE TISSUE NUCLEUS
NAKED AXIS-CYLINDER
BUNDLE OF FIBRILS EMERGING FROM NODE OF RANVIER
TACTILE DISC
MYELIN SHEATH
PERINEURIUM

Tactile corpuscle in vertical section; semidiagrammatic. (Gerrish.)

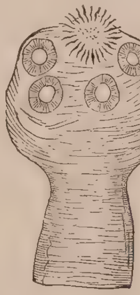
**Tac'tion.** Touch, or the sense of touch.

**Tactom'eter.** Instrument for determining the degree of sensibility of the touch.

**Tac'tual.** Tactile.

**Tac'tus.** Tact; touch. **T. dolorif'icus,** sensation of pain to the touch. **T. exper'tus** or **erudi'tus,** the sense of touch cultivated to a high degree.

**Tæ'nia** (*tainia,* a band or ribbon). Fascia. A tract of white nerve substance in the brain. A genus of solid intestinal worms—tapeworms—characterized by an elongated, flattened, and articulated body. Of this genus the four most commonly found in the human body are: *T. lata* (see *Bothriocephalus latus*), *T. solium, T. saginata* or *mediocanellata,* and *T. echinococcus.* **T. acanthot'rias,** found rarely in the human intestine. **T. aceph'ala,** Bothriocephalus latus. **T. arma'ta,** Tænia solium. **T. artic'ulos demit'tens,** Tænia solium. **T. canella'ta,** see *Tænia.* **T. cani'na,** T. cucumerina. **T. cœnu'rus,** see *Cœnurus.* **T. cor'nea,** striæ terminales. **T. cucumeri'na,** tapeworm found in the lower animals and occasionally in man. **T. cucurbiti'na,** Tænia solium. **T. denta'ta,** Bothriocephalus latus. **T. diminu'ta,** T. flavopunctata. **T. echinococ'cus,** tapeworm of dog, scolex; when ingested it produces echinococcus or hydatid cysts in man. **T. ellip'tica,** elliptic-jointed tapeworm. **T. flavopuncta'ta,** found rarely in man; the ova resemble those of T. solium. **T. for'nicus,** white stria running along the margin of the third ventricle from the pillar of the fornix to the pineal gland. **T. gris'ea,** Bothriocephalus latus. **T. hippocam'pi,** corpora fimbriata. **T. huma'na arma'ta,** Tænia solium. **T. huma'na iner'mis,** Bothriocephalus latus. **T. hydatig'ena,** hydatid. **T. iner'mis,** T. mediocanellata. **T. la'ta,** Bothriocephalus latus. **T. leptoceph'ala,** T. flavopunctata. **T. lophoso'ma,** crested tapeworm. **T. madagascarien'sis,** a rare form of tapeworm. **T. margina'ta,** tapeworm found in dog. **T. mediocanella'ta,** worm derived from beef, and frequently fifteen or twenty feet long, with a larger head than the Tænia solium, and with larger and fuller segments. **T. medul'læ oblonga'tæ,** band on the surface of the wall of the fourth ventricle. **T. membrana'cea,** Bothriocephalus latus. **T. min'ima,** T. flavopunctata. **T. na'na,** Egyptian or dwarf tapeworm. **T. nervo'sa Hal'leri,** ganglion of Gasser. **T. os'culis lateral'ibus gem'inis,** Bothriocephalus latus. **T. os'culis lateral'ibus solita'riis,** Bothriocephalus latus. **T. os'culis marginal'ibus solita'riis,** Tænia solium. **T. os'culis superficial'ibus,** Bothriocephalus latus. **T. plex'us choroide'i ventric'uli quar'ti,** posterior portion of the roof of the fourth ventricle. **T. pon'tis,** band of white fibres passing from the gray substance of the posterior perforated space to the medullary centre of the cerebellum. **T. pri'ma,** Bothriocephalus latus. **T. sagina'ta,** T. mediocanellata. **T. secun'da,** Tænia solium. **T. semicircula'ris,** a medullary, grayish, semitransparent layer situated in the groove separating the thalamus opticus from the corpus striatum in the lateral ventricle. **T. si'nûs rhomboida'lis,** t. plexus choroidei ventriculi quarti. **T. so'lium,** long or pork tapeworm, is commonly a few feet long, but sometimes its length is enormous; it principally inhabits the small intestines. **T. stria'ta** or **Tari'ni,** t. semicircularis; lamina cornea. **T. tec'ta,** lateral portion of striæ longitudinales. **T. tenel'la,** Bothriocephalus latus. **T. tu'bæ,** induration of the superior border of the perisalpinx. **T. vaveri'na,** T. flavopunctata. **T. ventric'uli quar'ti,** t. medullæ oblongatæ. **T. viola'cea,** blue or violet longitudinal streak on the floor of the fourth ventricle; see *Locus cœruleus.* **T. vulga'ris,** Bothriocephalus latus.



Head of tænia solium. (Heller.)

Proglottides or links of tænia solium.

**Tæ'niacide** (*tænia,* worm, *cædo,* to kill). An agent that destroys tapeworms.

**Tæ'niæ** (pl. of *tænia,* a band) **acus'ticæ.** Processus teretes. **T. co'li,** the longitudinal muscle-fibres of the colon. **T. for'nicis,** white striæ running transversely across the floor of the fourth ventricle. **T. fo'veæ rhomboida'lis,** t. fornicis. **T. longitudina'les,** t. coli. **T. valsal'væ co'li,** t. coli.

**Tæ'niafuge** (*tænia,* worm, *fugo,* to drive off). A remedy to expel tapeworms.

**Tæ'nicide.** Tæniacide.

**Tæ'nifuge.** Tæniafuge.

**Tæniin'.** Active principle of Hagenia abyssinica.

**Tæ'nioid.** Resembling a ribbon or tænia.

**Tæni'ola** (dim. of tænia). Any simple, band-like, or flat fibre—*filum tæniaforme*—seen under the microscope. **T. cine'reæ,** fascia dentata. **T. cor'poris callo'si,** prolongation of the peduncle of the septum lucidum.

**Tag al'der.** Alnus incana. **T. sore,** a name popularly given in England to ovine variola.

**Tage'tes.** A genus of composite plants, including *T. erecta* (French marigold) and *T. patula* (African marigold), having properties of calendula.

**Tagliacotian** (tal-yah-ko'shan) **opera'tion** (after G. Tagliacozzi, died 1593). See *Rhinoplasty.*

**Tag'ma** (a troop of soldiers). Ultimate particle of living cell, corresponding to the molecule of inorganic matter.

**Tail.** Caudal extremity. Also used to designate the smaller end of organs, as tail of the pancreas, tail of the epididymis. **T.-bone,** coccyx. **T.-fold,** hollow or fold in the embryo including the hind-gut.

**Tail'lefer's valve.** Mucous fold near the centre of the nasal duct.

**Tail′ors′ spasm.** Affection of the nature of writers' cramp, met with in tailors.

**Tait's knot.** Used in ligation of the pedicle in intra-abdominal surgery. A double ligature is passed through the pedicle, leaving a loop which is carried back over the pedicle, one end of the ligature then being passed through the loop and both ends tied. **T.'s meth′od,** perineorrhaphy. **T.'s opera′tion,** removal of uterine appendages, as of ovaries and Fallopian tubes for uterine myoma, and of Fallopian tube for pyosalpinx, etc.

**Ta′ka-di′astase.** Diastasic ferment from action of spores of fungus Eurotium oryzal on wheat-bran. Used in disorders of the stomach dependent on defective secretion of saliva and excess of acid in the stomach.

**Takamahak′a.** Fagara octandra.

**Ta′king.** See *Contagious.*

**Talal′gia** (*talus,* heel, *algos,* pain). Pain in the heel.

**Talc.** Combination of hydrated magnesian silicate with iron and alumina in small quantities. **T. earth,** magnesia.

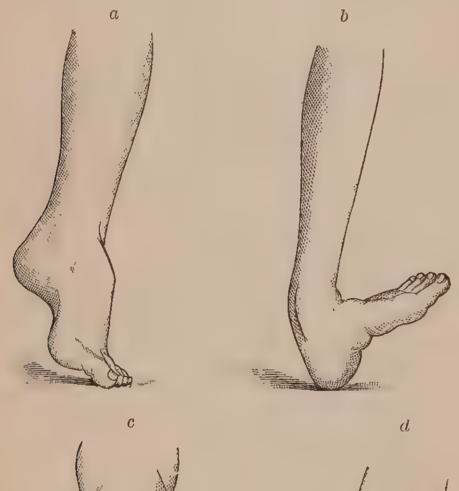
**Tal′cum.** Talc. **T. nephret′icum,** nephreticus lapis.

**Tale′olus** (dim. of talus). Malleolus.

**Taliaco′tian.** See *Tagliacotian.*

**Tal′iped.** One afflicted with talipes; a clubfooted person.

**Tal′ipes** (*talus,* ankle, *pes,* foot). Kyllosis, clubfoot. Of this there are many varieties. In one the foot, instead of resting on the ground by the whole plantar surface, touches it only with the metatarsophalangian articulations; it seems as if turned backward and broken upon the leg—*talipes equinus.* In other cases the foot is twisted inward, *varus, talipes varus,* so that it rests on the ground only on its outer edge; or it may be twisted outward, *valgus, talipes valgus,* and rest only on its inner edge; or on the back part of the heel, *talipes calcaneus;* in the *flatfoot* or *splayfoot, pes planus, talipes equinovalgus,* the plantar surface of the foot is flattened instead of being concave. These deformities, when congenital, may be rectified, at an early period, by proper mechanical means to strengthen the foot gradually and restore its proper shape and direction; if these means fail the tendons and muscles concerned in the deformity may be divided. Clubfoot may also come on after birth, being then commonly a sequel of infantile paralysis; the treatment in such cases is similar to that of the congenital deformity, special attention being paid, however, to an endeavor to restore the tone in the paralyzed muscles. **T. calcaneoval′gus,** t. calcaneus combined with valgus. **T. calcaneova′rus,** t. calcaneus combined with varus. **T. calca′neus,** see *Talipes.* **T. ca′vus,** exaggeration of the normal concavity of the sole. **T. equinoval′gus,** t. equinus combined with valgus. **T. equinova′rus,** t. equinus combined with varus. **T. equi′nus,** see *Talipes.* **T. perca′vus,** inordinate arching of the sole of the foot. **T. pla′nus,** flatfoot, the arch of the foot being depressed. **T. val′gus,** see *Talipes.* **T. var′us,** see *Talipes.*



Talipes: *a,* equinus; *b,* calcaneus; *c,* varus; *d,* valgus.

**Talipom′anous** (*talipes,* clubfoot, *manus,* hand). Club or clubbed hand.

**Tal′lerman treat′ment.** Local use of great heat in the form of dry air applied to a part, as a limb, placed in a cylinder.

**Tal′low.** Hard fat of neat cattle. **Bay′berry t.,** see *Wax, myrtle.*

**Tal′ma's disease′.** Myotonia acquisita. **T.'s opera′tion,** fixation of the omentum to the parietal peritoneum with the object of causing an anastomosis of the portal with the systemic veins, in order to drain away the fluid of ascites; omentopexy.

**Talocalca′neal** or **Talocalca′nean.** Relating to talipes astragalus and calcaneum, calcaneoastragaloid.

**Talocru′ral joint.** Articulation between the astragalus and the bones of the leg.

**Talofib′ular lig′aments.** Anterior and middle fasciculi of external lateral ligament.

**Tal′on.** Posterior prolongation on the sectorial teeth, abnormal in man.

**Talonavic′ular lig′ament.** Superior astragaloscaphoid ligament. Superior calcaneoscaphoid ligament.

**Taloscaph′oid.** Astragaloscaphoid. Relating to both astragalus and scaphoid.

**Talotib′ial lig′ament.** Portion of internal lateral ligament of the ankle.

**Tal′pa** (a mole). A tumor on the scalp; wen; mole.

**Talpa′ria.** Talpa.

**Tal′piform** (*talpa,* a mole). Formed like a mole.

**Ta′lus.** Astragalus; ankle. Talipes calcaneus.

**Tam′ara con′ga.** Averrhoa carambola.

**Tam′arac.** Bark of Larix americana; tonic and astringent.

**Tamaræ′a zec′la.** Tamarindus.

**Tamarin′dus** (Arab., *tamar hendi,* Indian date). T. officinalis, ord. *Leguminosæ* (Ph. U. S. and Br.). The preserved pulp of the tamarind, exported from the West Indies, preserved in syrup; refrigerant and laxative; dose, ʒj-℥j (4.0–32.0). The confection of senna contains 10 per cent. of tamarind. *Tamarind whey* is made by boiling ℥j of the pulp with Oiss of milk.

**Tamaris′cus** (*Tamaris,* now *Tambro,* on the borders of the Pyrenees). Tamarix.

**Tam′arix.** The tamarisk tree, ord. *Tamariscineæ.* The bark, wood, and leaves were formerly employed medicinally; the former for its aperient and corroborant virtues in obstructions of the liver; the latter in icterus, hæmoptysis, and cutaneous affections. From *T. orientalis* are obtained tamarisk galls, an excrescence growing upon its branches; from *T. mannifera,* an exudation called tamarisk manna.

**Tam′bor oil.** Purgative oil obtained from Omphalea oleifera.

**Tambour′** (Fr., drum). Drum-like instrument for recording movements of the heart and other organs.

**Tam′pan.** An insect belonging to the *Acaridæ* or ticks.

**Tampicin′.** Resin from Tampico jalap.

**Tampi′co jal′ap.** Tuber of Ipomæa simulans.

**Tam′pon** (Fr.). A plug of soft material, medicated or not, as the case may be, inserted into a cavity or canal, as the vagina or nares, to give support to the parts, arrest hemorrhage, absorb discharges, or keep a medicinal substance in contact with the tissues.

**Tamponade′.** Application of a tampon.

**Ta′mus** or **Tam′nus commu′nis.** Root is diuretic, and given as an antilithic, and as a topical application for removing bruise-marks.

**Tan.** To make or become brown by exposure to the sun and wind.

**Tanace′tic acid.** Tanisic acid. Prepared by the distillation of the heads of common tansy; is deposited in colored crystals, soluble in alcohol and ether; operates as a vermifuge in the same doses as santonin.

**Tanacetin′.** Bitter principle from Tanacetum vulgare.

**Tanace′tum.** (Ph. U. S.) The leaves and tops of T. vulgare, ord. *Compositæ*. They have a peculiar, strong odor and warm, bitter taste; tonic, deobstruent, and anthelmintic; dose, ʒj–iv (4.0–16.0) in infusion. Dose of the oil (not official), ♏v–x (0.32–0.65). **T. balsami′ta,** costmary, alecost, cockmint; fragrant-smelling herb, somewhat resembling mint, formerly much esteemed as a corroborant, carminative, and emmenagogue. **T. horten′se,** T. balsamita. **T. multiflo′rum,** South African plant used as a tonic, antispasmodic, and anthelmintic; given in flatulency, gout, amenorrhœa, and dropsy; especially prescribed in cases of ascarides, lumbricoides, and other entozoa. It is administered in the form of powder or infusion, the latter acting also as a diaphoretic and diuretic; likewise as a resolvent and anodyne fomentation.

**Tana′sia.** Tanacetum.

**Tana′tum.** Aluminum tannotartrate; used in throat affections.

**Tan′ge** (*tange,* rancidity). A putrescent tumor.

**Tan′gent** (*tango,* to touch). Touching, especially touching at a single point. **T. galvanom′eter,** appliance for measuring the current-strength of a battery.

**Tangen′tial.** Resembling a tangent; just touching. **T. ful′crum-cells,** external molecular layer of the retina.

**Tanghin′.** A powerfully poisonous principle from Cerbera tanghin or Tanghinia venenifera; resembles strophanthin in its action.

**Tan′gle.** Laminaria digitata. **Big t.,** Pila marina. **Blue t.,** Gaylussacia dumosa. **Sea t.,** Laminaria digitata.

**Tanis′ic acid.** Tanacetic acid.

**Tan′jore pills.** Pilulæ asiaticæ.

**Tan′nal.** Aluminum tannate; astringent, employed in catarrhs of mucous membranes.

**Tannal′bin.** An albuminate of tannin, used as an intestinal astringent; dose, gr. v–x (0.32–0.65).

**Tan′nate.** Salt of tannic acid. *T. of cannabin* and *t. of quinine* are those employed. The latter is sometimes called tasteless quinine, and given in tablets to children.

**Tan′nic acid.** Tannin.

**Tan′nigen.** Acetyl tannin; diacetyl tannin. Formed by treating (with heat) a solution of tannin with a mixture of glacial acetic acid and acetic anhydride, and finally neutralizing with a weak soda solution. Employed in chronic diarrhœa in doses of gr. iij–x (0.2–0.65) as an intestinal astringent, and as a local application in rhinitis and pharyngitis.

**Tan′nin.** Tannic acid; principle obtained from oak bark and other astringent vegetables, so called from its forming the chief agent in the process of tanning. Pure tannin obtained from galls by the action of ether has been employed as an excellent and powerful astringent; dose, gr. ij (0.13) several times a day. **T. albu′minate,** astringent like tannin, but taste is less unpleasant. **T. glyc′erol,** glycerin of tannic acid.

**Tannochlo′ral.** Captol. A combination of tannic acid and chloral. Antiseptic. Used as an application in falling out of the hair.

**Tan′nocol.** Compound of tannin and glycerin.

**Tan′noform.** By the action of gallotannic acid on formaldehyde. Used internally, in dose of gr. iv–viij (0.25–0.5), as an astringent intestinal antiseptic, and externally in skin diseases, burns, piles, ozæna, etc.

**Tan′none.** Combination of tannic acid and urotropin, used in enteritis and typhoid fever; dose, gr. xv (1.0) three or four times daily.

**Tannopin′.** Tannone.

**Tannopumilin′.** Combination of oil of Pinus pumilio and gallic acid, used externally in skin diseases.

**Tan′nosal.** Creosal. Creosote tannate. Employed for the same purposes as creosote.

**Tan′ret's test.** Test for albumin, composed of mercuric chloride 135, potassium iodide 332, acetic acid 20; distilled water to make 1000 parts.

**Tan′sy.** Tanacetum. **Maud′lin t.,** Achillea ageratum. **Wild t.,** Potentilla anserina.

**Tap.** To give a quick, light blow. To puncture a cavity for the purpose of drawing off fluid or gas.

**Tape-grass.** Eel-grass.

**Tapeinocephal′ic** (*tapeinos,* low, *kephale,* head). Term applied to low, flattened skulls.

**Tapeinoceph′aly.** Condition of skull with flattened vault.

**Ta′per, high.** Verbascum nigrum.

**Ta′pes** (*tapes,* a carpet). Tapetum.

**Tape′tum** (*tapes,* a carpet). Nerve-fibres passing from the posterior border of the corpus callosum forward to the temporal lobes. **T. alve′oli,** the outer membrane of the teeth; the lining membrane or periosteum of the alveoli. **T. cellulo′sum,** stratum of cell-layers in the choroid coat. **T. choroide′æ,** a shining spot on the outside of the optic nerve in the eyes of certain animals, due to the absence of the pigmentum nigrum, occasioning the reflection of a portion of the rays from the membrana Ruyschiana. Its use appears to be, by reflecting the rays, to cause a double impression on the retina, and thus add to the intensity of vision. **T. cor′poris callo′si,** band of fibres between the corpus callosum and the temporal lobe. **T. fibro′sum,** stratum of connective-tissue fibres in the choroid coat of the higher domestic animals. **T. lu′cidum,** t. choroideæ; also radiating fibres of the corpus callosum. **T. ni′grum** or **oc′uli,** pigmentary layer of the retina.

**Tape′worm.** Tænia. **Armed t.,** Tænia solium. **Beef t.,** Tænia mediocanellata or saginata. **Broad t.,** Bothriocephalus latus. **Doub′le-pored dog t.,** Dipylidium caninum. **Hydat′id t.,** Tænia echinococcus. **Long t.,** Tænia solium. **Pork t.,** Tænia solium. **Sol′itary t.,** Tænia solium. **Swiss t.,** Bothriocephalus latus.

**Taphepho′bia** (*taphos,* a grave, *phobos,* fear). Dread of being buried alive.

**Taph′osote.** Combination of tannic and phosphoric acids and creosote, employed in the diarrhœa of phthisis.

**Tapinoceph′aly.** Tapeinocephaly.

**Tapio′ca.** See *Jatropha manihot.*

**Ta′piroid.** Like a tapir's snout, said of an elongated cervix uteri.

**Tapotement,** tap-ot-mon(g)′ (Fr.). Form of percussion employed in massage.

**Tap′ping.** Paracentesis.

**Tap′sus barba′tus.** Verbascum nigrum.

**Tar.** See *Pinus sylvestris.* **T. ac′ne,** a form of acne resulting from the application of fluid tar or from the action of the atmosphere impregnated with the vapor of tar. **Barba′does t.,** petroleum. **T. beer,** see *Pinus sylvestris.* **T. infu′sion,** see *Pinus sylvestris.* **Min′eral t.,** pissasphaltum. **T. oint′-**

**ment,** unguentum picis liquidæ. **T. wa′ter,** see *Pinus sylvestris.* **T. wine,** see *Pinus sylvestris.*

**Ta′ra.** A disease of uncertain nature which prevailed at one time in Siberia.

**Taracannin′.** Crystallizable principle from cockroach; supposed diuretic.

**Tarache** (tar′ak-e), **Tarag′ma,** or **Tarag′mus.** Any disorder of sight caused by trauma.

**Tar′agon.** Artemisia dracunculus.

**Tar′aho.** Peltandra virginica.

**Tar-and-soot can′cer.** Epithelioma of the scrotum; chimney-sweep's cancer.

**Tar′antism.** A feigned or imaginary disease characterized by excessive avidity for dancing at the sound of instruments, ascribed popularly to poisoning by the bite of the tarantula. A sort of tarantism peculiar to Africa, and believed to be spontaneous, has been called *tarantismus tangitanus.*

**Taran′tula.** Tarentula. A species of spider whose bite is poisonous.

**Taras′sis** (*tarasso,* to throw into disorder). Male hysteria.

**Taraxacerin′.** Crystallizable principle of taraxacum.

**Taraxacin′.** Bitter principle of taraxacum.

**Tarax′acum.** (Ph. U. S.) The root of T. officinale, dandelion. Employed as a cholagogue and in various hepatic disorders; it is also regarded as diuretic. The following are official: *Extrac′tum tarax′ici;* dose, gr. v–xxx (0.32–2.0). *E. t. flu′idum;* dose, ʒj–ij (4.0–8.0). See *Leontodon taraxacum.*

**Tarax′is.** Mild ophthalmia.

**Tarchon** (tar′kon) **sylves′tris.** Achillea ptarmica.

**Tardieu's′ ecchymo′ses** or **spots.** Punctiform ecchymoses seen beneath the pleura after death from asphyxia; Bayard's ecchymoses.

**Tar′entism.** Tarantism.

**Taren′tula.** Tarantula.

**Taren′tulism.** Tarantism.

**Tar′gar.** Juniperus communis.

**Ta′ri.** Palm or cocoa wine, from which sugar was obtained, called jagry; once used as a tonic.

**Tari′ni's fas′cia** (after the anatomist Tarin). Fascia dentata. **T.'s fora′men,** opening into aquæductus Fallopii, commonly called the hiatus Fallopii. **T.'s fos′sa,** T.'s pons. **T.'s pons,** cineritious substance between the corpora albicantia which unites the crura and assists in forming the bottom of the third ventricle; the fossa at the bottom of which it is placed is called *locus perforatus posticus,* posterior perforated space, substantia or laminata perforata posterior. **T.'s tæ′nia,** tænia semicircularis. **T.'s valve,** posterior medullary velum.

**Tarnier's′ sign.** A sign indicating an approaching abortion, consisting in an obliteration of the angle between the upper and lower portions of the uterus.

**Ta′ro.** Arum esculentum.

**Tar′sal** (*tarsus*). That which relates to the tarsus. **T. arch′es,** made by the palpebral arteries passing across the tarsal cartilages. **T. ar′tery,** branch of the dorsalis pedis artery. **T. articula′tions** result from the union of the bones of the tarsus with each other. **T. canal′,** channel under the head of the abductor hallucis through which pass the main vessels and nerves to the sole of the foot; interarticular canal of the tarsus. **T. car′tilages,** see *Tarsus.* **T. cyst,** chalaza. **T. lig′aments,** fibrous bands running from the eyelids to the malar and nasal process of the superior maxillary bones. **T. mus′cle,** two muscles of this name are connected with the lids; *inferior,* of the lower lid, and *superior,* of the upper lid. **T. plates,** t. cartilages. **T. tu′mor,** chalaza.

**Tarsa′le.** A tarsal bone; see *Tarsus.*

**Tarsal′gia** (*algos,* pain). Pain, gouty or other, in the tarsus.

**Tarsa′lia** (pl. of tarsale). Tarsal bones; see *Tarsus.*

**Tarsa′lis.** Tarsal muscle.

**Tar′sea la′ta ligamen′ta.** Tarsal ligaments.

**Tarsec′tomy** (*ektome,* excision). Excision of all or part of the tarsus.

**Tarsecto′pia** (*ektopos,* out of place). Dislocation of the tarsus.

**Tar′sian.** Tarsal.

**Tarsi′tis.** Inflammation of the tarsal cartilages.

**Tarsocheiloplas′tic** (*tarsos,* wicker-work frame, *cheilos,* edge, *plasso,* to mould). Operation for the repair of the edges of the eyelids in trichiasis.

**Tarsomala′cia.** Softening of the tarsus of the eyelids.

**Tarsometatar′sal.** That which relates to tarsus and metatarsus. **T. articula′tions** are those between the bones of the second row of the tarsus and the metatarsal bones. **T. lig′aments,** those connected with the tarsometatarsal joints, some of which are dorsal and others plantar.

**Tar′so-or′bital.** Relating to the tarsus and the walls of the orbit, as *t.-o. fascia.*

**Tarsophy′ma** (*phyma,* tumor). Tumor of the tarsus.

**Tar′soplasty** (*plasso,* to mould). Plastic operation upon the eyelid.

**Tarsorrhaph′ia** or **Tarsor′rhaphy** (*rhaphe,* suture). Operation for diminishing the size of the opening between the eyelids when enlarged by surrounding cicatrices.

**Tarsot′omy** (*tome,* incision). The section or removal of the tarsal cartilages.

**Tar′sus** (*tarsos,* the flat of the foot). Posterior part of the foot. It consists of seven bones arranged transversely in two rows, between which amputation is sometimes performed. The first or tibial row consists of the astragalus and os calcis; the second or metatarsal, of the scaphoid, cuboid, and three cuneiform bones. Also (*tarsos,* wicker-work frame) the supporting framework of the eyelids, composed mainly of two small, cartilaginous layers seated in the substance of the free edge of each eyelid. The upper is larger and broader than the lower. Both commence at the bifurcated extremity of the tendon and of the orbicularis palpebrarum, and pass to the opposite commissure of the eyelids. They are broader in the middle than at their extremities.

**Tar′tar.** Antimonium tartarizatum, (improperly) potassii supertartras impurus; also called tartarum rubrum and red argol when obtained from red wines, tartarum album when from white wines. Tartar is the saline deposit from wines as they become aged, which attaches itself to the sides of the casks and bottles in which they are kept. It consists of a considerable quantity of acidulous tartrate of potassium, tartrate of lime, silica, alumen, oxide of iron, manganese, and red coloring-matter if the wine be red. Chiefly used for the preparation of cream of tartar. Also an incrustation which forms on the teeth about the coronæ; see *Odontolith.* **Calca′reous t.,** potassii subcarbonas. **Cream of t.,** potassii bitartras. **Crys′tals of t.,** potassii supertartras. **T. emet′ic,** antimonium tartarizatum. **Salt of t.,** see *Potash* and *Potassii subcarbonas.* **Sol′uble t.,** potassii tartras; see *Potash.*

**Tar′tarated an′timony.** Antimonium tartarizatum. **T. i′ron,** ferrum tartarizatum. **T. so′da,** sodium tartrate.

**Tartar′ic acid.** $H_2C_4H_4O_6$. An organic acid of crystalline form, found in the vegetable kingdom, chiefly in grapes and acid fruits. It is refrigerant and antiseptic, but is chiefly used for making effervescent draughts with soda. Obtained from acid tartrate of potassium.

**Tar′tarized an′timony.** Antimonium tartarizatum. **T. i′ron,** ferrum tartarizatum.

**Tartarlith′in.** A salt of lithium analogous to cream of tartar; a uric-acid solvent in rheumatism, gout, etc. **T. and sul′phur,** a combination of equal parts of each, used in chronic pharyngitis and bronchitis, digestive disorders, skin diseases, etc.

**Tar′tarum.** Potassii supertartras impurus. **T. ru′brum,** see *Tartar.* **T. solu′bile,** potassii tartras. **T. vitriola′tum,** potassii sulphas.

**Tar′tarus.** Tartar; tartrate.

**Tar′trated.** Containing tartar or tartaric acid.

**Tasch′kend ul′cer.** Sartian disease. Endemic malady of Taschkend. It occurs on the face as a red spot, with induration of the skin and finally ulceration.

**Ta′sis** (*tasis*). Extension; tension.

**Taste.** One of the five external senses, which instructs us as to the savor of bodies, and of which the tongue is the principal organ. Gustation is the exercise of this faculty. The nerves associated with taste are the glossopharyngeal and the lingual branch of the fifth pair. **T. bea′kers,** t. buds. **T. buds** or **bulbs,** flask-shaped bodies surrounding the circumvallate papillæ of the tongue, and supposed to be special organs of taste. **T. cells,** spindle-shaped cells found in the taste buds. **T. gob′lets,** t. buds. **T. ridg′es,** see *Ridge*.

**Tattoo′ing.** A practice of puncturing the skin and forcing coloring-matters into the punctures. Sailors in all countries are in the custom of practising it by rubbing or forcing gunpowder into the punctures. The figures thus formed remain through life. The process has also been employed surgically for æsthetic purposes, as in cases of opacity of the cornea.

**Tat′ze.** The fruit of Myrsina africana, native of Abyssinia, the Cape of Good Hope, the Azores, and Algeria; used as a tæniafuge.

**Tau′rin.** Amido-ethyl-sulphonic acid; a substance found in bile in combination with cholalic acid; solid, colorless, and crystallizable.

**Taurochol′ates.** Salts of taurocholic acid.

**Taurochol′ic acid.** See *Cholic acid*.

**Tau′rus.** The lower part of the penis with the raphe extending to the anus.

**Tauryl′ic acid** (*tauros*, a bull). Substance resembling carbolic acid found in urine.

**Tau′ya, Tayu′ga, Tayu′ya.** Root of a South American plant, used in Brazil as a remedy for syphilis and dropsies, and as an anthelmintic.

**Tavignot's′ amputa′tion.** See *Amputation*.

**Taxine′.** Crystalline alkaloid found in seeds and leaves of Taxus baccata.

**Tax′is** (*tasso*, to arrange). Methodical pressure exerted by the hand on a hernial tumor for the purpose of reducing it. **Bipo′lar t.,** replacing of a retroverted uterus by pressure upward through the rectum, the cervix of the uterus being brought down into the vagina.

**Taxo′dium dis′tichum.** Cypress, American or bald cypress; indigenous; ord. *Coniferæ*. A balsam obtained from it is applied to cuts and wounds; the resin from the cones is diuretic and carminative.

**Taxonom′ic.** Relating to taxonomy.

**Taxon′omy** (*taxis*, order, *nomos*, law). Arrangement or classification of living organisms.

**Tax′us bacca′ta.** The yew tree, smilax, family *Coniferæ*. The leaves have been recommended in epilepsy; the resin obtained from the bark has been called albir. **T. canaden′sis,** American yew, ground hemlock; indigenous; the leaves are said to be sedative.

**Tax′wax.** See *Nucha*.

**Tay's choroidi′tis.** Choroiditis guttata senilis, a spotted degeneration of the choroid membrane in old people.

**Tayu′ga.** Tauya.

**Tea.** Thea. **Ap′ple t.,** see *Apple tea*. **Baha′ma t.,** Lantana camara. **Beef t.,** see *Beef tea*. **Ber′ried t.,** gaultheria. **Blank′enheim t.,** see *Galeopsis grandiflora*. **Brazil′ t.,** Lantana pseudothea. **Breast t.,** pectoral t. **Bush′man's t.,** Methystophyllum glaucum. **Caf′fre t.,** Helichrysum nudifolium. **Chick′en t.,** see *Chicken tea*. **Flax′seed t.,** infusum lini compositum. **Gin′ger t.,** infusum zingiberis. **Hot′tentot's t.,** Helichrysum serpyllifolium. **Lab′rador t.,** Ledum latifolium. **T.-leaf eye,** conjunctivitis with mucopurulent discharge resulting from prolonged application of tea leaves to the eyes, as practised in domestic medicine. **Marsh t.,** Ledum palustre. **Mex′ico t.,** Chenopodium ambrosioides. **Mint t.,** infusum menthæ. **T. mix′ture,** see *Species*. **Moun′tain t.,** gaultheria. **Mut′ton t.,** an infusion of mutton prepared in the same way as beef tea. **New Jer′sey t.,** celastrus. **Oswe′go t.,** Monarda coccinea. **Par′aguay t.,** Ilex paraguensis. **Pec′toral t.,** see *Pectoral*. **Red′berry t.,** gaultheria. **Sage t.,** infusum salviæ. **Santa Fé t.,** Alstonia theæformis. **Sas′safras t.,** saloop. **Slip′pery elm t.,** infusum lini compositum. **South Sea t.,** Ilex vomitoria. **Span′ish t.,** Chenopodium ambrosioides. **Team′ster's t.,** see *Teamster's*. **Veal t.,** see *Veal*.

**Tea′berry.** Gaultheria.

**Teach′er's nod′ule.** Inflammation of the vocal cord marked by the formation of one or more small, whitish nodules.

**Teak.** Paronychia.

**Tea′-kettle pol′icy.** A term applied to the recommendation given to boil all water used for drinking purposes, in order to escape the water-borne diseases, such as typhoid fever, cholera, and dysentery.

**Teale's amputa′tion.** That in which two square flaps are made, the longer of a length of half the circumference of the limb, the shorter one-quarter as long, and so placed as to include the vessels.

**Team′ster's tea.** Cautillo. Tea made from Ephedra antisyphilitica, a shrub growing in Arizona, and used as a remedy in venereal disease.

**Tear.** Secretion of the lacrymal gland, poured between the globe of the eye and the eyelids to facilitate the motions. The tears are saline, inodorous, and colorless. In pharmacology tear means any gummy or other exudation, the drop-like form of which has been considered to resemble tears. **Deer's t.,** bezoar of the deer. **T. punc′ta,** lacrymal puncta.

**Tease.** See *Teasing*.

**Tea′sel.** Dipsacus sylvestris.

**Teas′ing.** Method of preparing tissues for microscopic examination by tearing apart the coarser elements with needles.

**Teat.** Nipple. Nipple-shaped structure.

**Technic** (tek′nik) or **Technique,** tek-neek′. Method of procedure.

**Technocausis,** tek-no-kaw′sis (*techne*, art, *kausis*, a burning). Cauterization by application of heat as opposed to that by chemical substances.

**Techomy′za fus′ca.** Dipterous insect of which larvæ have been found in the stools and vomit.

**Tecnoc′tony** (*teknon*, a child, *kteino*, to kill). Infanticide.

**Tecnol′ogy** (*teknon*, a child, *logos*, a discourse). A treatise on children.

**Teco′ma.** A genus of plants, ord. *Bignoniaceæ*. **T. i′pe,** Brazilian tree, the bark of which yields much tannin. **T. radi′cans,** Bignonia radicans, trumpet flower, trumpet creeper, Virginia creeper; indigenous; leaves are acrid; root sudorific, used in snake-bite and as a vulnerary. **T. subvernico′sa,** Brazilian tree with leaves of acrid taste and having diuretic properties.

**Tecta′ria calagua′la.** See *Calagualæ radix*. **T. ferrugin′ea,** see *Calagualæ radix*.

**Tectocephal′ic** (*tectum*, roof, *kephale*, head). Form of head produced by premature union of the sagittal sutures; scaphocephalic.

**Tectol′ogy.** Consideration of the shape of structures.

**Tecto′rial** (*tectum*, roof). Relating to a covering. **T. mem′brane,** thick, fibrillated membrane covering the organ of Corti, resting on rods and hair cells and converting the spiral groove into a canal.

**Tecto′rium.** A covering, as of a part or organ.

**Teel oil.** Oil obtained from Sesamum orientale. It resembles cotton-seed oil.

**Teeth.** See *Tooth, Dental*, and *Dentition*. **An′gles of the t.,** see *Surfaces of the t.*, below. **Artific′ial t.,** see *Artificial*. **Barred t.,** molar teeth when the roots are spread or tortuous, so that they cannot be extracted without being broken or without a portion of the alveolar arch being removed. **Block t.,** in dentistry, two or more artificial teeth carved from a piece of ivory, or formed from porcelain paste afterward baked and finished. **Chia′ie t.,** see *Chiaie*.

**Eye t.**, canine teeth. **Hutch'inson's t.**, see *Hutchinson*. **Incorrupt'ible t.**, see *Artificial*. **Irregular'ity of the t.**, teeth occupying other than normal positions in the dental arch and in relation to their antagonists. **Jaw t.**, molar teeth. **Milk t.**, see *Dentition*. **Min'eral t.**, artificial t. **Ser'pent t.**, see *Serpent teeth*. **Shed'ding of the t.**, see *Dentition*. **Sock'ets of the t.**, see *Alveolus*. **T. of succes'sion**, permanent teeth that succeed corresponding milk teeth. **Sur'faces of the t.**, each tooth crown presents five surfaces: *mesial*, next to the middle line; *distal*, farthest from the middle line; the portion meeting antagonizing teeth is called the *occlusal* or *morsal surface;* the outer surfaces of the anterior teeth are called *labial;* those of the posterior teeth are called *buccal;* the inner surfaces of the lower teeth are called *lingual;* those of the upper teeth the *palatal;* compounds of these words are made to express midway positions, as *mesiolabial* and *distobuccal*. *The angles of the teeth* are named according to the surfaces that they separate. **Vit'reous sub'stance of the t.**, enamel of the teeth. **Wis'dom t.**, see *Dentition*. **Wit t.**, see *Dentition*.

**Teeth'ing.** Dentition.

**Tegen'era medicina'lis.** Cantharis.

**Teg'men.** Roof or covering. **T. an'tri**, a thin plate of bone forming the upper boundary of the mastoid antrum. **T. mastoide'otympan'icum**, osseous roofing for the tympanum and mastoid cells, formed by the t. mastoideum and t. tympani. **T. mastoide'um**, bony roofing over the mastoid cells. **T. tym'pani**, portion of the anterior surface of the petrous portion of the temporal bone covering the tympanum, Eustachian tube, and mastoid antrum.

**Tegmen'tal.** Relating to, or belonging to, the tegmentum or posterior portion of the pons Varolii and crus. **T. nu'cleus**, red nucleus. **T. radia'tion**, radiating fibres from the back part of the internal capsule to the cortex.

**Tegmen'tum.** The upper portion of the main body of the peduncular fibres of the cerebrum, composed principally of the fasciculus teres and the posterior pyramid. **Subthal'amic t.**, extension of the t. beneath the thalamus. **T. tym'pani**, tegmen tympani. **T. vasculo'sum**, this corresponds, in the ear of birds, to the stria vascularis of the mammalia. **T. ventric'uli latera'lis**, centrum ovale majus.

**Teg'umen** (*tego, tectum*, to cover). Integument. Dorsal portion of crus cerebri.

**Teg'ument.** Integument.

**Tegumen'tal** or **Tegumen'tary.** Relating to the integument.

**Tegumen'tum.** Integument. **T. au'ris**, membrana tympani. **T. ventriculo'rum cer'ebri**, oval centre of the brain.

**Teich'mann's crys'tals.** Hæmin crystals.

**Teichopsia**, ti-kop'se-ah (*teichos*, wall, *ops*, eye). Scotoma scintillans. Subjective sensation of vision, in which zigzag lines are seen; occurring in migraine at times.

**Teinodyn'ia** (*teino*, to extend, *odyne*, pain). Tenodynia. Pain of the sinews or tendons.

**Teinophlogo'sis** (*teino*, to extend, *phlogosis*, inflammation). Inflammation of the sinews or tendons.

**Tek'edon** (*tekedon*). Tabes.

**Te'la** (a web). Texture, tissue. **T. accidenta'lis medulla'ris**, encephaloid. **T. adhæsi'va**, isinglass plaster. **T. adipo'sa**, membrana adiposa. **T. arane'æ**, spider's web. **T. caverno'sa**, cavernous texture. **T. cellulo'sa**, cellular tissue. **T. choroide'a**, velum interpositum. **T. cor'nea**, corneous tissue. **T. elas'tica**, elastic membrane. **T. emplas'tica**, sparadrapum. **T. erecti'lis**, erectile tissue. **T. fibro'sa**, see *Fibrous*. **T. Gal'teri**, sparadrapum Galteri. **T. Hippoc'ratis cribro'sa**, cellular tissue. **T. hymenochondro'des**, cartilaginous tissue. **T. hymenochondroi'des**, cartilaginous tissue. **T. ichthyocol'læ glu'tinans**, see *Sparadrapum adhæsivum*. **T. inodula'ris**, inodular tissue. **T. muco'sa**, cellular tissue. **T. organ'ica**, organic texture. **T. sclero'sa**, sclerous tissue. **T. subcuta'nea**, panniculus adiposus. **T. subsero'sa**, subserous cellular tissue. **T. vesicato'ria**, sparadrapum vesicatorium.

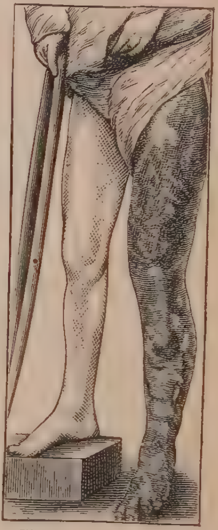
**Telæsthe'sis** (*tele*, far, *aisthesis*, perception). Ready perception from remote facts or premises. Telepathy.

**Tel'amon.** Bandage for uniting the edges of a wound.

**Telangeiecta'sia.** Telangiectasia.

**Teleangeiec'tasis.** Telangiectasia.

**Telangiecta'sia** or **Telangiec'tasis** (*tele*, far, *angeion*, vessel, *ektasis*, dilatation). Dilatation of the arterioles and capillary vessels; nævus maternus, wine spots, claret stains. Aneurysm by anastomosis. According to some, fungus hæmatodes. **T. lymphat'ica**, lymphangioma caused by dilatation of the lymphatic vessels. **T. oc'uli**, cirsophthalmus.



Cirsoid aneurysm of femoral artery and telangiectasis, with lengthening of affected limb from hypernutrition. (Parker.)

**Telangio'sus** (*tele*, far, *angeion*, vessel). Disease of the capillary blood-vessels.

**Teleden'drites** (*telos*, end, *dendron*, tree). Terminations of the nervous cells called dendrites.

**Teleg'ony** (*tele*, distant, *gonos*, semen). Impression of a previous husband on offspring of another husband by the same woman.

**Tel'egraphers' cramp.** Occupation neurosis affecting the muscles of the forearm in telegraph operators; Morse finger.

**Telenceph'alon** (*telos*, end). Prosencephalon.

**Teleneu'rites** (*telos*, end, *neuron*, nerve). Terminal filaments of the main trunk of the axis-cylinder process.

**Teleneu'ron** (*tele*, distant). Termination of a nerve.

**Teleological**, tel-e-o-loj'ik-al. Relating to teleology.

**Teleol'ogy** (*tele*, distant, *logos*, doctrine). Doctrine of purpose as applied to the formation of objects.

**Teleorgan'ic** (*telos*, end or object). Vital, necessary to life.

**Teleosclero'sis rheumat'ica.** Scleroderma.

**Telepath'ic.** Pertaining to telepathy.

**Tel'epathist.** One familiar with or experienced in telepathy.

**Tel'epathy** (*tele*, far, *pathos*, disease). Thought-reading, mind-reading. Communication of one mind with another without the use of external means.

**Tel'ephone tinni'tus.** Neurosis of audition supposed to be due to continued use of the telephone.

**Telesphore'sis** (*telos*, the end, *phoreo*, to bear). Completed normal delivery.

**Telesthe'sia.** Telæsthesis.

**Teli'ni.** Species of beetle found in India, used for blistering.

**Tellicher'ri bark.** Bark of Wrightia zeylanica. Employed in dysentery.

**Tellu'ric.** Pertaining to the earth. **T. acid**, $H_2TeO_4$, a dibasic acid of tellurium, analogous to sulphuric acid. The salts formed by it are called *tellurates*.

**Tellu'rium** (*tellus*, the earth). An element, symbol Te, found in combination with various metals. Its salts occasion the exhalation of a disagreeable, alliaceous odor from the body.

**Tel'oblast.** A terminal segmentation sphere.

**Teloden'dron.** Terminal expansion of an axis-cylinder process.

**Telokine'sis.** Telophase.

**Telolecithal**, te-lo-les'ith-al (*telos*, end, *lekithos*, yolk of egg). Term used to express the fact that in the ovum the yolk is massed at one end, and that segmentation is unequal or partial.

**Telolem'ma** (*telos*, end, *lemma*, skin). Membrane covering the papilla where the nerve-filament pierces the sarcolemma of muscle-fibre.

**Telomala'cia** (*telos*, end, *malakia*, softening). Phlegmonous erysipelas.

**Tel'ophase.** Division of the cell in a plane passing through the equator of the spindle; see *Mitosis*.

**Telor'asis** (*tele*, far, *orao*, to view). Presbyopia.

**Tem'perament** (*tempero*, to moderate). Characteristics of mind and body according to which individuals are classed as sanguine, bilious, lymphatic, melancholic, or nervous; see these words.

**Tem'perance.** Sobriety. Moderation; opposed to gluttony and drunkenness.

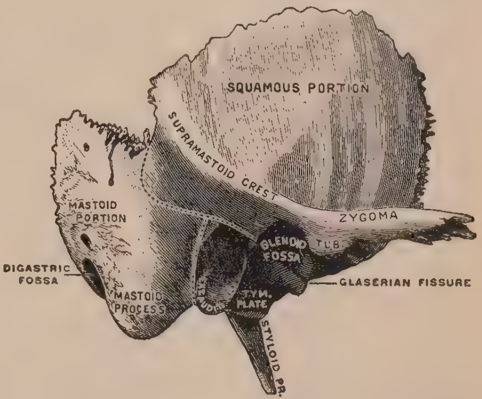
**Temperan'tia.** Agents which quiet circulation or reduce fever.

**Tem'perature.** See *Heat*. **Ab'solute t.**, t. reckoned from the so-called absolute zero, or —273.7° C. **An'imal** or **bod'y t.**, see *Heat, animal*. **Mean t.**, the average of a large number of observations of the atmospheric t. of any given locality. **Nor'mal t.**, t. of the human body in health, 98.6° F. or 37° C. **T. sense**, sense of appreciation of temperature; may be lost in some forms of disease. **T. spots**, see *Cold spots* and *Hot spots*.

**Tem'pering.** Operation of modifying the hardness while increasing the elasticity of metals.

**Tem'ple.** Depression on each side of the head, between the forehead and eye anteriorly and the ear posteriorly. The temples, distinguished into right and left, correspond to the temporal fossa on each side. The word is thought to be from the Latin *tempus*, time, because in this part the hair first begins to turn white and to indicate age.

**Tem'poral** (*tempus*, temple). That which relates to the temples. **T. aponeuro'sis** or **fas'cia**, very strong aponeurosis, of a bluish, shining color, attached to the whole of the curved line of the temporal bone, to the posterior edge of the malar bone, to the superior margin of the zygomatic arch, and forming an envelope for the temporal muscle. **T. ar'teries**, crotaphite arteries, are several: I. The *temporal artery*, properly so-called, arises from the outer side of the superior part of the external carotid. It divides into two branches; the one anterior—temporal frontal or internal or anterior; the other posterior—the temporal occipital or external or superior. Before its division it gives off: 1. Branches to the parotid, to the joint of the lower jaw, to the meatus auditorius, and to the masseter. 2. The transverse artery of the face. 3. The middle temporal, which arises beneath the cheek-bone and traverses the temporal aponeurosis immediately beneath that bone. II. The *deep-seated temporals*, two in number, arise from the internal maxillary and are distinguished as anterior and posterior; they send their principal divisions to the temporal muscle. **T. ar'teries of the brain**, branches of the posterior cerebral supplying the temporal lobe. **T. bone**, irregularly shaped bone seated at the lateral and inferior part of the cranium, of which it forms part, and contains within it the special organs of audition. It is divided into three parts: 1. The squamous portion. 2. The mastoid portion. 3. The petrous portion, petrous process. **T. canals'**, small canals in the malar bone for the passage of vessels from the orbit to the temple. **T. convolu'tions**, convolutions of the temporal lobe of the brain. **T. crest**, ridge of bone starting from the external angular process of the frontal bone, curving upward and backward over the surface of the parietal bone. **T. fas'cia**, temporal aponeurosis. **T. fos'sa**, an excavation observed at each side of the head, filled by the muscle whose name it bears, and formed by the temporal and sphenoid bones below, by the parietal and frontal above; separated by a transverse crista from the zygomatic fossa, and completed before by the cheek-bone. **T. frontoma'lar point**, temporal extremity of the frontomalar suture. **T. gan'glion**, minute ganglion of the sympathetic system lying on the external carotid artery. **T. lines**, two curved prominences upon the external surface of the frontal and parietal bones, known as superior and inferior. **T. lobe**, portion of cerebrum in the middle cerebral fossa, bounded by the fissure of Sylvius anteriorly and superiorly, posteriorly continuous with the occipital lobe; the cortical centre for hearing. **T. mus'cle**, broad, flattened, triangular muscle filling the temporal fossa; attached to the temporal aponeurosis and fossa, and, by a strong tendon which passes under the zygomatic arch, inserted into the coronoid process of the lower jaw; it raises the lower jaw and applies the teeth against each other. **T. nerves** are the superficial temporal, from the inferior maxillary branch of the fifth pair, behind the condyle of the jaw; and the deep temporals, from the same nerve at its exit from the cranium. **T. pro'cess**, angle of the malar bone articulating with the zygoma. **T. pro'cess of lentic'ular nu'cleus**, gray substance uniting the lenticular nucleus with the tail of the caudate nucleus. **T. ridge**, curved prominence of temporal lines. **T. sul'ci**, depressions on the temporal lobe of the cerebrum. **T. sur'face**, external surface of the temporal and parietal bones forming the floor of the temporal fossa. **T. veins**, veins draining the temporal fossa and tissues of the vertex into the temporomaxillary vein.



The right temporal bone, outer surface. The dotted lines indicate the lines of suture between squamous, mastoid, and tympanic portions. (Gerrish.)

**Tempora'lis.** Temporal.

**Tem'porary car'tilage.** That which is later replaced by bone. **T. teeth**, see *Dentition*.

**Temporiza'tion.** Expectant or temporizing treatment of disease. See *Expectant*.

**Temporo-.** In composition, the temple and the temporal bone.

**Temporocen'tral tract.** Nerve structure connecting the temporal lobe and central gyri.

**Temporocerebel'lar tract.** Nerve structure connecting the temporal lobe and cerebellum.

**Temporofa'cial.** Belonging to the temple and face. **T. nerve**, branch of the facial nerve.

**Temporofron'tal tract.** Nerve structure connecting the temporal and frontal lobes.

**Temporoma'lar canals'.** Canals in the malar bone giving passage to nerves supplying the temple and cheek.

**Temporomandib'ular.** Temporomaxillary.

**Temporomax'illary.** Belonging to the temporal bone and lower jaw. **T. articula'tion**, joint between the glenoid cavity and the transverse process of the temporal bone on one hand and the condyle of the lower jaw on the other. Two thin cartilages cover the surfaces of these bones. The one is common to the transverse process and the portion of the glenoid cavity anterior to the condyle. This articulation has an interarticular fibrocartilage, two synovial capsules, and two lateral ligaments, internal and external. **T. nerves,** divisions of the facial nerve distributed to the temporal and maxillary regions. **T. vein,** formed by the temporal and internal maxillary; divides into two branches, one to the facial, the other to form the external jugular vein.

**Tem′poro-occip′ital.** Belonging to the temporal and occipital bones. **T.-o. ar′tery,** see *Temporal artery.* **T.-o. cerebel′lar fi′bres** or **tract of crus′ta,** bundle of fibres in the crusta cerebri to the outer side of the pyramidal tract, not entering the internal capsule, and connecting the occipital and temporal lobes of the cerebrum and the hemisphere of the cerebellum.

**Temporopari′etal.** Belonging to the temporal and parietal bones. **T. convolu′tions,** those connecting the temporal and parietal lobes at the bottom of the fissure of Sylvius; also called retroinsular convolutions. **T. su′ture,** connecting the temporal and the parietal bones; consisting of two parts—squamous suture and parietomastoid suture.

**Temporosphenoi′dal.** Belonging to the temporal and sphenoidal bones. **T. convolu′tions,** those of the temporal lobe of the cerebrum. **T. lobe,** temporal lobe. **T. sul′ci,** temporal sulci.

**Temporozygomat′ic sur′face.** External surface of the great wing of the sphenoid bone.

**Tem′pus.** Time. Temple. **T. intercala′re,** apyrexia; intermission.

**Tem′ulence.** Delirium; also apoplectiform condition from drunkenness—apoplexia temulenta or dead-drunkenness.

**Temulin′.** Narcotic substance, the active principle of Solium temulentum.

**Tenac′ulum** (*teneo,* to hold). Fine hook attached to a handle which is used to raise up a blood-vessel while it is being tied, or any other bit of tissue. Also a band of fibrous tissue. **Assali′ni's t.,** forceps or double tenaculum, the points of which are fine, sharp, and bifurcated, so as to be readily received into each other when the instrument is closed on the artery by a spring. **T. cu′tis,** band of fibrous tissue connecting the corium with subjacent tissues. **T. menis′ci,** fibrous band running from temporomaxillary fibrocartilage to near the sphenosquamous suture. **T. ner′vi hypoglos′si,** band passing across the hypoglossal nerve near its exit from the skull. **T. ten′dinum,** band of fibrous tissue connecting tendons with the sheaths.

Tenaculum.

**Tenalin′.** Substance obtained from the nut of the Areca catechu, or betel nut, the poisonous principle arecolin having been as much as possible extracted. Tæniafuge.

**Tenax′.** Larded oakum for surgical dressings.

**Ten′dines** (pl. of tendo) **corona′riæ.** Coronary tendons.

**Tendini′tis.** Inflammation of a tendon.

**Ten′dinoplasty.** Tenoplasty.

**Tendinosu′ture.** Operation of applying a suture to a divided tendon.

**Ten′dinotrochanter′ic lig′ament.** Ligamentous band passing from upper border of the capsule of the hip-joint and holding the tendon of the glutæus minimus muscle tightly in place.

**Ten′dinous** (*tendo,* a tendon). Sinewy. Relating or appertaining to or having the nature of tendons. **T. spot,** fibrinous exudation on a serous membrane. **T. tu′mor,** fibroid tumor.

**Ten′do.** Tendon. **T. Achil′lis,** tendon of attachment of the gastrocnemius and soleus muscles to the os calcis. **T. calca′neus,** Achilles tendon. **T. cordi-for′mis,** phrenic centre. **T. cor′dis veno′sus,** circulus callosus Halleri. **T. interme′dius,** phrenic centre. **T. oc′uli,** ligament of Zinn. **T. palpebra′rum,** see *Orbicular muscles.*

**Tendomu′coid.** Mucoid present in tendons.

**Ten′don** (*teino,* to stretch). Sinew, thew, leader. A fibrous cord, more or less round, long, or flattened, of a white, pearl color, and composed of very close parallel fibres. The tendons are attached to the bones by one extremity; by the other they receive the insertions of the fleshy fibres; sometimes they afford attachment to fleshy fibres at both ends—as in the digastric muscle. **Achil′les t.,** tendo Achillis. **T. cells** or **cor′puscles,** cells of connective tissue found in tendons and ligaments. **Cen′tral** or **cor′diform t. of the di′aphragm,** phrenic centre. **Conjoined′ t.,** see *Conjoined.* **Cor′onary t.,** see *Coronary.* **T. graft′ing,** repair of a defect in a tendon by grafting from another tendon. Also grafting on a paralyzed muscle by taking a slip from a muscle that has not been paralyzed. **Ham′string t.,** see *Hamstrings.* **T. reac′tion,** tendon reflex. **T. re′flex,** deep reflex, a reflex contraction in a muscle, produced by percussion of its tendon; see *Reflex.* These reflexes are exaggerated or abolished in a number of nervous diseases, cerebral and spinal tumors, injuries, etc., as shown in the following table (Krauss):

SUMMARY OF TENDON REFLEXES.

| | | | | |
|---|---|---|---|---|
| Exaggeration of Tendon Reflexes. | Organic Disease. | Spinal Cord. | | Myelitis. |
| | | | | Amyotrophic lateral sclerosis. |
| | | | | Paraplegia spastica. |
| | | | | Multiple sclerosis. |
| | | | | Syringomyelia and hydromyelia. |
| | | | | Hæmatomyelia and hæmatorrhachis. |
| | | | | Spinal tumors. |
| | | | | Pachymeningitis hæmorrhagica interna. |
| | | | | Pachymeningitis cervicalis hypertrophica. |
| | | | | Brown-Séquard's spinal paralysis. |
| | | | | Arthritic muscular atrophies. |
| | | Brain. | Hemiplegia. | Cerebral apoplexy. |
| | | | | Cerebral embolism, Thrombosis. |
| | | | | Acute encephalitis. |
| | | | | Hæmatoma. |
| | | | | Hydrocephalus. |
| | | | | Senile dementia. |
| | Functional Disease. | | | Hysteria. |
| | | | | Epilepsy. |
| | | | | Neurasthenia. |
| | | | | Paramyoclonus. |
| | | | | Tetanus. |
| | | | | Psychoses. |
| | | | | Infectious processes. |
| Abolition of Tendon Reflexes. | Neuritis. | | | Simple. |
| | | | | Toxic. |
| | | | | Endemic. |
| | | | | Infective. |
| | | | | Locomotor ataxia. |
| | | | | Poliomyelitis anterior. |
| | | | | Spinal muscular atrophies |
| | | | | Hereditary ataxia (Friedreich's). |
| | | | | Chorea mollis. |
| | | | | Chronic ergotism. |
| | | | | Diabetes mellitus. |
| | | | | Traumatism. |
| Abolition and Exaggeration of Tendon Reflexes. | Meningitis. | | | Spinal. |
| | | | | Cerebral. |
| | | | | Dementia paretica. |
| | | | | Idiocy. |

**T. spin′dles,** Golgi's corpuscles. **Tre′foil t.,** the cordiform tendon of the diaphragm. **T. of Zinn,** ligament of Zinn.

**Ten′dons, twitch′ing of the.** Subsultus tendinum.

**Tendoph′ony** (*tendo,* tendon, *phone,* sound). Auscultation over a tendon during contraction of its muscle.

**Ten′doplasty.** Plastic operation on a tendon.

**Tendosynovi′tis.** Tenosynovitis.

**Tendot′omy.** Tenotomy.

**Tendovag′inal.** Relating to a tendon and its sheath, as *t. ganglion.*

**Tenes′mus** (*teino,* to stretch). Frequent and painful desire to evacuate the rectum or bladder, accompanied by involuntary straining; a chief symptom of inflammation of the lining membrane of the viscus. Forcing-down pain of the uterus and bladder. **T. vesi′cæ,** painful evacuation of the urine, with perpetual desire to void it; dysuria. **T. vesi′cæ muco′sus,** cystirrhœa.

**Te′niacide.** Tæniacide.

**Te'niafuge.** Tæniafuge.

**Tennes'son's ac'ne.** A disseminated form of acne cornea or acne with indurated sebaceous matter.

**Ten'nis-el'bow.** Sprain or strain of the elbow occurring occasionally in players of tennis.

**Tennysin'.** Alkaloid in cerebral tissue.

**Tenodyn'ia** (*odyne*, pain). Pain in a tendon.

**Tenog'raphy** (*tenon*, tendon, *grapho*, to write). Description of tendons.

**Tenol'ogy** (*tenon*, tendon, *logos*, a treatise). Part of anatomy having to do with tendons.

**Ten'on.** Tendon.

**Ténon's' cap'sule, fas'cia, mem'brane,** or **space.** See *Fascia of Ténon.*

**Tenoni'tis.** Inflammation of a tendon, or of the capsule of Ténon.

**Tenonosto'sis** (*tenon*, tendon, *osteon*, bone). Ossification of a tendon.

**Tenontag'ra** (*tenon*, tendon, *agra*, seizure). A variety of gout affecting the tendinous parts of muscles, or the tendinous ligaments which strengthen certain articulations.

**Tenonti'tis.** Inflammation of a tendon.

**Tenontody'nia** (*tenon*, tendon, *odyne*, pain). Pain in tendons on motion.

**Tenontog'raphy.** Tenography.

**Tenontol'ogy.** Tenology.

**Tenontophy'ma** (*tenon*, tendon, *phyma*, growth). Tumor of a tendon.

**Tenontotheci'tis.** Inflammation of a tendon sheath.

**Tenontot'omy.** Tenotomy.

**Ten'ophyte** (*tenon*, tendon, *phyton*, growth). Tumor of a tendon, bony or cartilaginous usually.

**Tenoplas'tic.** Relating to tenoplasty, or the operation for repairing a defective tendon.

**Ten'oplasty** (*tenon*, tendon, *plasso*, to form). Operation of repairing a tendon or of restoring a lost part of it.

**Tenor'rhaphy** (*tenon*, tendon, *rhaphe*, suture). Union of a divided tendon by suture.

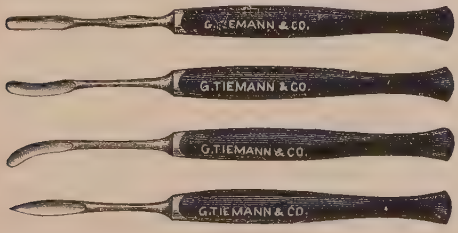
**Tenosto'sis.** Ossification of a tendon.

**Tenosu'ture.** Tenorrhaphy.

**Tenosyni'tis.** Tenosynovitis.

**Tenosynovi'tis.** Inflammation of tendons and their sheaths, the result of injury or of gout, rheumatism, etc., or tuberculous in character.

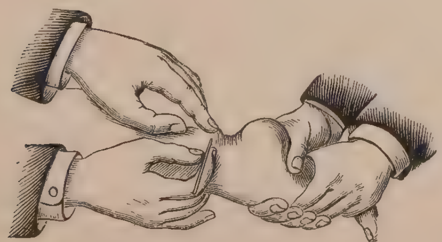
**Ten'otome** (*tenon*, tendon, *tome*, incision). An instrument for dividing tendons, especially by the subcutaneous method.



Tenotomes.

**Tenot'omist.** One who is versed in tenotomy.

**Tenot'omy.** Operation of dividing a tendon (usually subcutaneously), practised for the correction of deformity, as in clubfoot, or for relief of strabismus.



Tenotomy of tendo Achillis.

**Ten'sion** (*tendo*, to stretch). State of a stretched part when its textures are distended by the afflux of fluids or the accumulation of gas, or when its fibres are drawn, as it were, in an opposite direction, and are consequently more resisting than usual. **Arte'rial t.**, the resistance of the arterial walls to the pressure of the contained blood. **Elec'trical t.**, electromotive force. **Intraoc'ular t.**, pressure of fluid contents of eye against its coats. **T. su'ture,** a suture applied to the tissues about a wound to relieve the immediate strain upon the sutures directly approximating the cut edges. **Ve'nous t.**, the resistance of the walls of the veins to the distending force of the contained blood.

**Ten'sive.** Accompanied by tension or by a feeling of tension.

**Ten'sor.** That which stretches or renders tense. **T. cap'sulæ**, muscular fasciculus arising from upper portion of humerus, inserted into capsule of shoulder-joint. **T. cap'sulæ scapulohumera'lis,** muscular bundle arising from base of acromial process of scapula and inserted either into capsule of shoulder-joint or on the humerus. **T. cap'sulæ tibiotarsa'lis** or **T. of cap'sule of an'kle,** muscle sometimes found arising from back of tibia below flexor digitorum and inserted into capsule of ankle-joint. **T. choroide'æ,** ciliary muscle. **T. fas'ciæ antibra'chii,** muscular fasciculus sometimes found arising from external head of triceps extensor cubiti and inserted into fascia of origin of extensor carpi ulnaris. **T. fas'ciæ col'li,** muscular fasciculus sometimes found running in form of loop from one extremity of the clavicle to the other. **T. fas'ciæ et cu'tis fo'veæ axilla'ris,** small muscular fasciculus arising from subocularis and inserted into fascia and skin of axilla. **T. fas'ciæ deltoide'æ,** muscular fasciculi sometimes found inserted into deltoid fascia. **T. fas'ciæ dorsa'lis pe'dis,** muscular fasciculus sometimes found arising from anterior surface of tibia and inserted into annular ligament and deep fascia. **T. fas'ciæ la'tæ,** fascia lata muscle. **T. fas'ciæ pel'vis,** portion of sustentator recti. **T. fas'ciæ planta'ris,** muscle sometimes found arising from the tibia and inserted into plantar fascia. **T. fas'ciæ poplitea'lis,** muscular fasciculus sometimes found arising from the biceps femoris and inserted into the popliteal fascia. **T. fas'ciæ sura'lis,** portion of semimembranosus sometimes found passing to fascia of leg. **T. ligamen'ti annula'ris ra'dii ante'rior** or **vola'ris,** portion of supinator brevis arising from coronoid process and inserted into annular ligament of radius. **T. ligamen'ti annula'ris ra'dii dorsa'lis** or **poste'rior,** portion of supinator brevis arising from dorsum of ulna and inserted into annular ligament of radius. **T. membra'ni synovia'lis tar'si,** t. capsulæ tibiotarsalis. **T. pala'ti,** circumflexus muscle. **T. pli'cæ ala'ris,** muscle of birds, at times found in man as a prolongation of tendon of deltoid down the radial side of the arm to insertion of supinator longus. **T. semivagi'næ articulatio'nis humeroscapula'ris,** muscular fasciculus sometimes found extending from pectoralis major to capsule of shoulder-joint. **T. tar'si,** lacrymal muscle; a small muscle belonging to the inner commissure of the eyelids, described by Prof. Horner, of Philadelphia, and hence termed muscle of Horner. It arises from the posterior flat surface of the os unguis near its junction with the ethmoid bone, and passes forward and outward, lying on the posterior face of the lacrymal ducts; as it approaches the commissure of the lids it splits into two nearly equal parts, each of which is appropriated to a duct and inserted along its course almost to the punctum lacrymale. Its chief office is to influence the position of the punctum lacrymale and to regulate the course of the tears through the lacrymal ducts. **T. tibiotarsa'lis,** t. capsulæ tibiotarsalis. **T. troch'leæ,** muscular slip sometimes given off from inner border of the levator palpebræ and inserted into the trochlea. **T. tym'pani,** a small muscle arising from the petrous portion of the temporal bone and the cartilage of the Eustachian tube, and terminating by a tendon reflected over the processus cochleaformis, and inserted into the apophysis of the handle of the malleus. **T. vagi′næ fem′oris,** fascia lata muscle. **T. ve′lum pala′ti,** circumflexus muscle.

**Tenso′res capsula′rum articulatio′num.** Muscular fasciculi inserted into joint-capsules to prevent injury during relaxation.

**Tensu′ra** (*tendo,* to stretch). Tension.

**Tent.** Small roll of lint or gauze, of a cylindrical or pyramidal shape, introduced into wounds and fistulæ to prevent closing before they are filled up from the bottom. Tents are sometimes made of prepared sponge, gentian root, slippery elm, tupelo root, or laminaria (sea tangle), which swell by imbibition of fluids, and are used for dilating the os and cervix uteri.

**Tentacula′ria.** Filaria hominis bronchialis.

**Tentac′ulum cerebel′li.** Tentorium.

**Tenth cra′nial nerve.** Pneumogastric nerve.

**Tenti′go** (*tendo,* to stretch). Priapism. **T. vene′rea,** nymphomania. **T. vere′tri,** satyriasis.

**Tento′rial.** Relating to the tentorium. **T. an′gle,** that formed by the basicranial axis and plane of the tentorium. **T. si′nus,** straight sinus.

**Tento′rium** (*tendo,* to stretch). T. cerebelli, lateral processes of the dura mater, transverse septum. A process of the dura mater separating the cerebrum from the cerebellum. It extends from the internal horizontal spine of the occipital bone directly forward to the sella turcica of the sphenoid. **T. of hypoph′ysis,** fold of the dura mater covering the hypophysis cerebri.

**Tent′wort.** Asplenium ruta muraria.

**Ten′uis ma′ter.** Pia mater.

**Tepegua′je.** Gum of Acacia acapulcensis, employed in Mexico.

**Tephromyeli′tis** (*tephros,* ash-colored, *myelos,* marrow). Inflammation of the anterior horns of the spinal cord; poliomyelitis.

**Tephro′sia apolline′a.** Galega apollinea of Egypt and Nubia. The leaves are often mixed with senna. **T. leptostach′ya,** plant of Senegal with a purgative root. **T. purpu′rea,** of Coromandel; the root is bitter, and a decoction of it is often prescribed in dysentery, lientery, and tympanites. **T. sen′na,** the leaves are used for senna by the people of Popayan. **T. toxica′ria,** Galega toxicaria of Cayenne; leaves are used for poisoning fish; suggested as a substitute for digitalis. **T. virginia′na,** Galega virginiana.

**Tephro′sis** (*tephros,* ash-colored). Incineration.

**Tep′id** (*tepidus,* warm). Moderately warm.

**Terabdel′lum** (*teras,* monster, *bdella,* a leech). A pneumatic machine, which when connected with a cupping apparatus largely increases the amount of local depletion.

**Ter′ata** (pl. of teras). Monsters. **T. anacatadid′yma,** double monsters with division of cerebrospinal axis both above and below. **T. anadid′yma,** double monsters with division of the upper part of the cerebrospinal axis. **T. catadid′yma,** double monsters with division of the lower portion of the cerebrospinal axis.

**Terat′ic.** Relating to monsters.

**Ter′atism** (*teras,* monster). Monstrosity or other anomalous formation.

**Teratogen′esis** or **Teratog′eny** (*teras,* monster, *genesis,* generation). The formation of monsters.

**Ter′atoid** (*teras,* a monster). Like a monstrosity. **T. tu′mor,** tumor formed by congenital inclusion of a portion of one fœtus in another.

**Teratolog′ical** (*teras,* monster, *logos,* treatise). Relating to teratology.

**Teratol′ogy.** Science in relation to monsters.

**Terato′ma.** Tumor composed of various tissues not present in the normal structure of the part. A tumor composed of the products of growth of one individual within the tissues of another individual of the same species (Adami).

**Terato′sis.** Teratism.

**Ter′ceron.** See *Mulatto.*

**Terchlo′ride.** Compound of three atoms of chlorine with an atom of a base or with an amount of the base that will combine with one atom of chlorine.

**Terebel′la** (*tereo,* to bore). Trepan.

**Terebel′lum.** Cranial perforator.

**Terebene′.** Terebenum. $C_{10}H_{16}$. Yellow, oily liquid produced by the action of sulphuric acid on turpentine. It is defined as a liquid consisting chiefly of pinene, and containing not more than very small proportions of terpinene and dipentene. Used chiefly in winter cough, bronchitis, bronchorrhœa, catarrhal disease of the larynx and throat, etc., and also in cystitis, flatulent dyspepsia, and respiratory diseases; expectorant; dose, ♏v–x (0.32–0.65). Externally, in watery solution, it is employed for dressing wounds.

**Tereben′thene.** Oil of turpentine. Terebinthine.

**Terebe′num.** (Ph. U. S. and Br.) Terebene.

**Ter′ebinth.** Pistachia terebinthus, a tree from which Chian turpentine is obtained. Turpentine.

**Terebin′thin.** A hydrocarbon resembling terebene in composition, resulting from distilling oil of turpentine with an alkali. **T. hy′drate,** terpin hydrate.

**Terebin′thina** (*terebinthos,* the turpentine tree). Turpentine, botin, albotin, altilibat, brutino. Substance of the consistence of honey which flows from many trees of the *Terebinthinaceæ* and *Coniferæ* families, composed of resin and essential oil, without benzoic acid. See *Pinus sylvestris. Terebinthina* (Ph. U. S.) is the concrete oleoresin of Pinus palustris and other species of pinus. Like the other turpentines, it is stimulant, diuretic, anthelmintic, and laxative; dose, gr. ij–x (0.03–0.65). *Ol′eum terebin′thinæ* (Br.), *o. t. rectifica′tum* (U. S.), is given in doses of ♏v–xx (0.32–1.3), or as an anthelmintic, ʒiij (12.0); this dose is dangerous, however. *Res′ina t.* (U. S.); dose, gr. j–v (0.065–0.32). *Linimen′tum t.* is official in the Ph. U. S. **T. argentoraten′sis,** see *Pinus picea.* **T. balsam′ea,** see *Pinus balsamea.* **T. canaden′sis** (Ph. U. S.), Canada turpentine, Canada balsam, or balsam of fir, is obtained from *Abies balsamea* or *Pinus balsamea;* it is employed externally and in the mounting of histological specimens. **T. chi′a,** see *Pistacia terebinthus.* **T. coc′ta,** Strasburg turpentine boiled in water until solidification occurs on cooling. **T. commu′nis,** see *Pinus sylvestris.* **T. copaïf′era,** copaiba. **T. cyp′ria,** see *Pistachia terebinthus.* **T. empyreumat′ica,** see *Pinus sylvestris.* **T. larici′na,** see *Pinus larix.* **T. pistach′ia,** Pistacia terebinthus. **T. vene′ta,** see *Pinus larix.* **T. ve′ra,** see *Pistacia terebinthus.* **T. vulga′ris,** see *Pinus sylvestris.*

**Terebin′thinate.** Having the qualities of or impregnated with turpentine.

**Terebin′thinize.** To add turpentine.

**Terebin′thus.** Terminthus. **T. gummif′era,** Bursera gummifera. **T. lentis′cus,** Pistacia lentiscus. **T. vulga′ris,** Pistacia terebinthus.

**Ter′ebra** (*terebro,* to bore). Trepan.

**Ter′ebrant** or **Ter′ebrating** (*terebro,* to bore). Boring, as *t. pains.*

**Terebra′tion.** Trepanning. Puncturing of a bone by any instrument.

**Tere′do os′sium** (*terebro,* to bore). Caries; spina ventosa.

**Te′res** (long and round). Epithet given to many organs the fibres of which are collected into round fasciculi. **Ligamen′tum t.,** round ligament in the cotyloid cavity of the os innominatum, attached to the head of the bone and to the bottom of the cavity. A small, fibrous fascia extending from the coronoid process of the ulna to below the bicipital tubercle of the radius. Round ligament of the uterus. **T. ma′jor,** muscle situated at the inferior and posterior part of the shoulder; attached, on the one hand, to the outer surface of the scapula, to the corresponding part of its axillary margin; and, on the other, to the posterior margin of the bicipital groove of the humerus. It carries the arm backward and inward, and also inward in rotation. When it acts with the longissimus dorsi and pectoralis major it applies the arm against the lateral part of the chest and keeps it forcibly there. **T. min′imus,** accessory muscle of t. minor, arising from the axillary margin of the scapula and inserted into the upper portion of the humerus. **T. mi′nor,** muscle situated at the posterior and inferior part of the shoulder; narrow and flattened from above to below in its inner half, and from before to behind in the outer. Attached, on the one hand, to the outer surface of the scapula, near the inferior angle; and, on the other, to the inferior part of the great tuberosity of the humerus. It depresses the arm, and causes it to turn on its axis from within outward; it also carries it backward.

**Ter′esis** (*tereo*, to watch closely). Observation.

**Teretiprona′tor.** Pronator radii teres.

**Teretiscapula′ris.** Teres major.

**Teret′rium** or **Teret′ron.** Trepan.

**Ter′gal** (*tergum*, the back). Dorsal.

**Tergem′ini.** Trigemini.

**Ter′gum.** Dorsum; vertebral column.

**Ter′ma.** Lamina cinerea or terminalis, thin layer of gray substance between the corpus callosum and optic chiasm.

**Termat′ic ar′tery.** Branch of anterior cerebral or anterior communicating artery to the lamina cinerea.

**Ter′minal.** Relating to the end. **T. ar′teries,** those that do not anastomose before ending in the capillaries. **T. cav′ities,** see *Lung* **T. frames of Dei′ters,** plates in the reticular lamina of the organ of Corti. **T. ven′tricle,** dilatation of the central canal of the spinal cord in conus medullaris.

**Termina′lia.** A genus of plants, ord. *Combretaceæ*. See *Myrobalanus*.

**Terminol′ogy** (*terma*, term, *logos*, discourse). Nomenclature.

**Termin′thus.** Berry or fungous carbuncle. Also Pistacia terebinthus.

**Ter′minus.** The end, limit, or boundary.

**Terms** (periods). Menses.

**Ter′nary** (*ter*, thrice). Third. Consisting of three.

**Terox′ide.** Trioxide.

**Ter′penes.** Term applied to various isomeric hydrocarbons of the composition $C_{10}H_{16}$; principal constituents of a number of essential oils, as of turpentine, juniper, lemon, lavender, etc.

**Terpin′.** $C_{10}H_{20}O_2$. Turpentine camphor, derived from terpin hydrate by the action of heat. **T. hy′drate,** crystalline substance obtained by acting on turpentine oil with alcohol and nitric acid; used as an expectorant in bronchitis, whooping-cough, and also in chronic nephritis; antiseptic; dose, gr. ij–xx (0.13–1.3). **T. i′odide,** iodoterpin, antiseptic used in acute affections of the lung and of the throat, in spray, or internally in doses of ten drops on sugar.

**Terpin′eol.** $C_{10}H_{17}OH$. An alcohol used for deodorizing iodoform.

**Terpi′ni hy′dras.** (Ph. U. S.) Terpin hydrate. It is defined as the hydrate of the diatomic alcohol, terpin.

**Ter′pinol.** Colorless, oily liquid produced by acting on terpin hydrate with sulphuric, phosphoric, or glacial acetic acid; used as a stimulant expectorant; dose, gr. v–xx (0.32–1.3).

**Ter′ra.** Earth. **T. absor′bens minera′lis,** magnesii carbonas. **T. al′ba,** argilla pura. **T. alu′minis,** argilla pura. **T. ama′ra aëra′ta,** magnesii carbonas. **T. ama′ra sulphu′rica,** magnesii sulphas. **T. argilla′cea hydra′ta,** argilla pura. **T. argilla′cea pu′ra,** argilla pura. **T. baryt′ica,** barium sulphate. **T. bola′ris,** argilla pura. **T. folia′ta,** sulphur. **T. f. minera′lis,** soda acetata. **T. f. tar′tari,** potassii acetas. **T. f. t. crystallisa′ta,** sodium acetate. **T. fullon′ica,** cimolia purpurescens. **T. japon′ica,** catechu; nauclea gambir. **T. lem′nia,** Lemnian earth, name given by the ancients to a solid, reddish, astringent substance, prepared with the pulp of the fruit of the baobab, an African tree; it is an argillaceous earth, and has been employed as an astringent. **T. livon′ica,** a terra sigillata, or sealed earth, from Livonia; very astringent. **T. mari′ta,** Curcuma longa. **T. noceria′na,** whitish, astringent earth found in the environs of Nocera, Italy. **T. orlea′na,** annotto, arnotta, pigmental matter obtained from the seeds of Bixa orleana or orellana or americana, orellana; recommended in dysentery for its astringent and stomachic qualities; it is called, according to its shape, flag, roll, or egg annotto; Spanish annotto is in small, oblong cakes; it is chiefly employed as a coloring-matter, as for butter. **T. os′sea,** bony matter; the earthy portion of bones. **T. pondero′sa,** baryta. **T. pondero′sa muria′ta,** muriate of baryta. **T. pondero′sa sali′ta,** muriate of baryta. **T. portugal′lica,** a reddish, astringent, styptic earth from Portugal. **T. sapona′ria,** cimolia purpurescens. **T. sigilla′ta,** sealed earth; bole or earthy matter made into little cakes or flat masses and stamped with certain impressions, as with the head of the Grand Seignior; to these belong the terra silesiaca, t. lemnia, t. turcica; see *Bole* and *Bolus alba*. **T. silesi′aca,** see *Terra sigillata*. **T. talco′sa oxyanthraco′des,** magnesii carbonas. **T. tur′cica,** see *Terra sigillata*. **T. uri′næ,** the earthy deposit in urine. **T. vitri′oli dul′cis,** colcothar.

**Terrain′ cure.** Treatment of cardiac diseases, obesity, etc., by mountain climbing, proper diet, etc.

**Ter′ritory, cell.** See *Cell*.

**Ter′rors, night.** See *Night-terrors*.

**Ter′sor ani.** Latissimus dorsi.

**Ter′tian** (*tertius*, third). Occurring every third day. **T. fe′ver,** tertian or third-day ague, third-day fever; an intermittent fever the paroxysms of which recur every other day, or every forty-eight hours. Tertian fevers are usually benign, but sometimes an estivoautumnal infection may assume this type. A *double tertian* is one in which a paroxysm occurs every day, the paroxysms of alternate days being associated.

**Tertiana′ria.** Scutellaria galericulata.

**Ter′tiary** (*tertius*, third). Third in order; a term usually employed to designate the third or later stages of syphilis. **T. am′yl al′cohol,** see *Amylenum hydratum*. **T. cur′rent,** electric current induced in a coil of wire by a secondary current. **T. degenera′tion,** degeneration caused by continued disuse of a part or organ, as of the optic nerve after extraction of the eyeball.

**Tertip′ara** (*tertius*, third, *pario*, to bring forth). A woman who has borne her third child.

**Tescala′ma.** Resinous drug used in Mexico, obtained from a variety of fig.

**Tes′sara** (*tessara*, four). Cuboid.

**Tess′ellated** (*tessellatus*, furnished with small, quadrangular stones). Having a checkered arrangement, like a mosaic pavement. **T. epithe′lium,** see *Epithelium*.

**Test** (*testis*, a witness). Method of ascertaining a fact by experiment. Also material used in such method. For the different tests see the qualifying words expressive of them. **T. meal,** a meal, definitely determined as to quantity and quality, by means of which the digestive power of the stomach is accurately tested; it may be a *t. breakfast* or *t. dinner*, the latter being the larger. **T. ob′ject,** a minute body (muscle-fibre, diatome, etc.) used to test the power and definition of a lens. **T. pa′per,** paper charged with reagent for use in chemistry. **T. solu′tion,** a standard solution of some reagent emplayed in chemical analysis. **T. tube,** tube made of thin glass, closed at one end, capable of withstanding high degree of heat. **T.-t. cul′ture,** see *Culture*. **T. types,** printed matter in type of various sizes, employed by oculists to determine the acuteness of vision.

**Tes′ta** (a shell). See *Ostrea*. **T. o′vi,** see *Ovum* and *Membrana putaminis*. **T. præpara′ta,** prepared oyster-shell, oyster-shell freed from extraneous matter, washed with boiling water, reduced to powder, and prepared in the same manner as creta præparata.

**Testa′ceous** (*testa*). Relating to, possessing, or derived from a shell.

**Test′aden** (*aden*, gland). Extract of testes of bull; used in diseases of the spinal cord and nerves.

**Testament′ary capac′ity.** Term used in legal medicine to indicate ability to make a valid will.

**Test′er, lung.** See *Lung-tester*.

**Tes′tes** (pl. of testis). The testicles; see *Testicle*. Inferior tubercles of the corpora quadrigemina; see also *Quadrigemina tubercula*. **T. mulie′bres,** see *Ovarium*. **T. sicca′ti,** dried and powdered testes of the bull; used in hysteria, neurasthenia, cerebrospinal affections, etc.

**Testibra′chium.** Superior peduncles of the cerebellum.

**Tes′ticle** (*testis*, a witness). Name of two glandular organs contained in the scrotum, whose office is to secrete sperm. Their substance, pulpa testis, consists of numerous conical, flattened lobules—lobuli testis—whose bases are directed toward the surface of the organ, and the apices toward the corpus Highmorianum. They are formed of a gray and softish substance, composed of tortuous canals, called tubuli or canaliculi or ductus seminiferi or seminales, vasa seminalia, vascula serpentina, folded on each other, and of extreme fineness. All these canals, uniting in their course, pass through the corpus Highmorianum, concur in forming the epididymis, and give origin to the vas deferens. The testicles are covered by a fibrous membrane, of an opaque white color and very tough, called tunica albuginea, dura mater testis, or simply albuginea, peritestis, of which the corpus Highmorianum is only an enlargement. Over this, again, is the tunica vaginalis, the second envelope of the testis. **Descent′ of the t.,** migration of the t. during advanced fetal life, through the inguinal canal into the scrotum. **Ir′ritable t.,** abnormal sensibility of that organ, which is painful on manipulation; termed also chronic neuralgia of the testicle. **Retained′ t.,** a t. which has not descended into the scrotum.

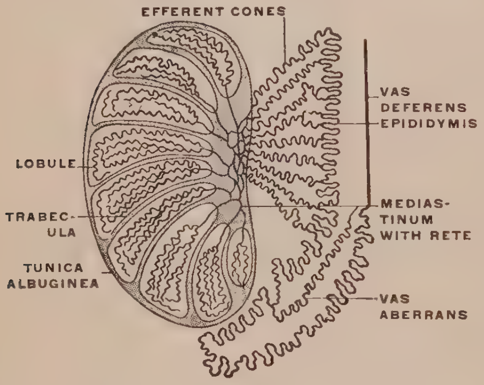


Diagram of testicle proper and epididymis. (Testut.)

**Testicon′dus** (*condo*, to hide). One whose testes have not descended into the scrotum. Cryptorchid.

**Testic′ular.** Belonging or relating to the testicle. **T. ar′teries,** spermatic arteries. **T. flu′id** or **juice,** semen; also fluid extracted from the testicles of animals. **T. veins,** spermatic veins.

**Testic′ulus.** Testicle. **T. accesso′rius,** epididymis. **T. cani′nus,** orchis mascula.

**Tes′tidin.** Alcoholic extract of the testes of cattle.

**Testine′.** Sterilized extract from testes of ram; employed in nervous debility, impairment of generative functions, etc.

**Tes′tis.** Testicle. **T. fœmine′us,** ovary. **T. mi′nor,** prostate. **T. mulie′bris,** ovary. **T. viri′lis,** testicle.

**Testi′tis.** Orchitis, inflammation of the testicle.

**Testu′do** (*testa*, a shell). A genus of reptiles, including the turtle. Also an encysted tumor supposed to resemble the shell of a testudo. **T. cer′ebri,** fornix. **T. scap′ulæ,** see *Scapula*.

**Teta′nia.** Tetany. **T. gravida′rum,** tetany of pregnant women.

**Tetan′ic.** Relating to or resembling tetanus. Epithet for a tonic convulsion. A remedy which acts on the nerves, and, through them, on the muscles, occasioning, in large doses, convulsions. The chief agents in this class are nux vomica, strychnine, brucine, arnica, and toxicodendron.

**Tetan′iform.** Resembling tetanus.

**Tetanil′la** (dim. of tetanus). An affection resembling tetany in which there are exaggerated reflexes and clonic spasms, the latter ceasing during sleep, but no rigidity; Trousseau's sign is also absent. Paramyoclonus multiplex resembles tetanilla and is sometimes so called.

**Tetanin′.** A ptomain, $C_{13}H_{30}N_2O_4$, derived from cultures of tetanus microbes; it produces tetanic symptoms in experiments on animals.

**Tetanine′.** Strychnine.

**Tetaniza′tion.** The production or condition of tetanic spasms, in which the patient is said to be tetanized.

**Tet′anize.** To produce continuous spasmodic action, or to stimulate a nerve so that the muscle it supplies will become tetanic.

**Tet′anoid.** Tetaniform. **T. fe′ver,** cerebrospinal meningitis. **T. paraple′gia,** anterolateral spinal sclerosis.

**Tetanomo′tor** (*motor*, mover). Instrument for exciting contraction of muscles by electricity.

**Tetanoth′ra.** Medicines which remove wrinkles.

**Tetanotoxin′.** Ptomain obtained from a culture of tetanus bacilli; produces tetanic symptoms in animals.

**Tet′anus** (*tetanos*, stretched). Spasm with rigidity. A disease consisting in a permanent contraction of all the muscles, or merely of some, without alternations of relaxation; characterized by closure of the jaws, difficulty or impracticability of deglutition, rigidity and immobility of the limbs and trunk, which is sometimes curved forward (*emprosthotonos*), sometimes backward (*opisthotonos*), sometimes to one side (*pleurothotonos*). When confined to the muscles of the jaws it is called *trismus*. Traumatic tetanus is that which supervenes on a wound. When occurring in the puerperal condition it is called puerperal tetanus, tetanus puerperarum. A tetanic contraction of single muscles does not imply necessarily the general disease or the action of the specific cause. A specific anaërobic microorganism is credited with the production of the disease. **T. anti′cus,** emprosthotonos. **T. antitoxin′,** prepared in a similar way to diphtheria antitoxin and similar to it in mode of action; used hypodermically in cases of wounds which are liable to be followed with tetanus. **T. bacil′lus,** Bacillus tetani. **Cephal′ic t.,** t. hydrophobicus. **Cer′ebral t.,** a peculiar state induced by the direct action of tetanus antitoxin on the brain, marked by a maniacal condition, epileptoid convulsions, etc. **T. dolorif′icus,** cramp. **T. dorsa′lis,** opisthotonos. **T. hydropho′bicus,** spasm in deglutition, imitating that of hydrophobia. **Idiopath′ic t.,** t. following exposure to cold and wet. **Intermit′tent t.,** tetany. **T. latera′lis,** pleurothotonos. **T. maxil′læ inferio′ris,** trismus. **T. neonato′rum,** trismus nascentium. **Par′tial t.,** tetany. **T. posterganeus′eus,** opisthotonos. **T. posti′cus,** opisthotonos. **Puer′peral t.** or **T. puerpera′rum,** t. occurring in women recently delivered. **Rheumat′ic t.,** idiopathic t. **T. se′rum,** t. antitoxin. **T. si′ne tet′ano,** progressive cachexia and death, without convulsions, occasionally following infection with the tetanus germ. **Traumat′ic t.,** that form of tetanus which supervenes on a wound. **T. universa′lis,** see *Tetanus*.

**Tet′any.** Intermittent tetanus, essential contracture. A disease characterized by tonic spasms, contractures of the extremities, sometimes the upper alone, or of the trunk as well, or sometimes generalized. The contractures occur in distinct attacks separated by intervals of comparative freedom. Trousseau's sign is often present; tendon reflexes are usually normal or may be diminished, but the cutaneous reflexes are exaggerated; there is persistent headache. Recovery is the rule, though death may occur in convulsions. Disordered digestion is a prominent etiological factor, and the disease is frequently associated with dilatation of the stomach, *gastric t.;* it has been observed after operation for removal of the thyroid gland, *t. thyreopriva,* and also associated with rheumatism, *rheumatic t.*

**Tetra-.** In composition, four.

**Tet'ra-al'lyl-ammo'nia-al'um.** Uric acid solvent.

**Tetraba'sic.** Relating to an acid having four atoms of hydrogen that may be replaced by bases.

**Tetrabra'chius** (*brachion,* arm). Monster having four arms.

**Tetrachei'rus** or **Tetrachi'rus** (*cheir,* hand). Monster having four hands.

**Tetrachlo'ride.** Combination of a radical with four atoms of chlorine.

**Tetrachlormeth'ane.** Carbon tetrachloride.

**Tetracoc'cus.** A coccus which forms fours by division through two planes of space.

**Tet'rad.** Group of four similar bodies, four micrococci, for example.

**Tetraethylammo'nium hydrox'ide.** $(C_2H_5)_4N,OH$. A salt of ammonium employed as a uric acid solvent. The dose is 10 minims of a 10 per cent. solution.

**Tet'ragon** (*tetra,* four, *gonia,* an angle). Quadrangle. **Lum'bar t.,** space in the lumbar region, of irregular, rhomboidal form, covered by aponeurosis of the latissimus dorsi, limited externally by the posterior edge of origin of the external oblique, internally by the edge of the sacrospinalis, above by the serratus posticus inferior, below by the superior edge of the internal oblique.

**Tetrago'nus.** Platysma myoides.

**Tet'rahit longiflo'rum.** Galeopsis grandiflora.

**Tetrahy'dric.** Term used to designate an alcohol or acid having four atoms of hydrogen that may be replaced.

**Tetrahydrobetanaph'thylamine.** See *Thermin.*

**Tetrahydroparachinan'isol.** Thallin.

**Tetrahydroparamethyloxyquin'olin** or **Tetrahydroparaquin'isol.** Thallin.

**Tetraiodoeth'ylene.** Diiodoform.

**Tetraiodophenolphthal'ein.** Nosophen.

**Tetraiodopyr'rol.** Iodol.

**Tetramas'thus** (*masthos,* a breast). Having four breasts.

**Tetramas'tigate** (*mastix,* a whip). Having four flagella.

**Tetrama'zia** (*mazos,* breast). Having four breasts.

**Tetramethylammo'nium hy'drate.** Hydrochlorate of trimethylamine is a caustic externally. Has been used internally, much diluted, as an antiarthritic and antipyretic.

**Tetrameth'ylenediam'ine.** See *Putrescine.*

**Tetrameth'ylputrescin'.** $C_8H_{20}N_2$. Very toxic crystalline base, obtained artificially from putrescin. As a poison it resembles muscarin.

**Tetrameth'ylthionin' chlo'ride.** Methylene blue.

**Tetram'ide.** See *Amide.*

**Tetram'ine.** See *Amine.*

**Tetrangu'ria.** Cucurbita citrullus.

**Tetranophthal'mus** (*ophthalmos,* eye). Monster having four eyes.

**Tetranop'sia** (*ops,* eye). Contraction of one quadrant of the visual field.

**Tetranthe'ra califor'nica.** Umbellularia californica. **T. pichu'rim,** pichurim beans.

**Tetrao'tus.** Tetrotus.

**Tetraphar'macum** (*pharmakon,* a medicine). Medicine consisting of four ingredients.

**Tetrap'odous** (*pous,* foot). Having four feet.

**Tet'rapus** (*pous,* foot). A monster having four feet.

**Tetras'celus** (*skelos,* leg). Monster having four legs.

**Tetras'ter** (*aster,* star). Figure presented during karyokinesis when the nucleus undergoes fourfold division.

**Tetras'toma** (*stoma,* mouth). A genus of trematode worms.

**Tetratom'ic.** Having four atoms. Tetrahydric.

**Tetratoxin'.** Ptomain from a culture of bacillus of tetanus, producing paralysis and convulsions.

**Tetrethyldiamidotriphenylcarbinolox'alate.** A bright green crystalline body giving blue color on solution in water; hydrochloric acid converts the green-blue solution to a green; hence used in testing acidity of the gastric juice.

**Tet'ronal.** A substance allied in composition to sulphonal; hypnotic. Chemically it is a diethylsulphone-diethylmethane.

**Tetronerythin'** (*erythros,* red). Pigment found in sponges, fishes, blood of crustacea, etc.

**Tetro'ros.** Astragalus.

**Tet'rose.** Sugar having four atoms of carbon in the molecule.

**Tetro'tus** (*ous,* ear). A double monster with partially fused heads, four ears being distinguishable.

**Tetrox'ide.** Combination of a radical with four atoms of oxygen.

**Tet'ter.** Herpes. **Crust'ed t.,** impetigo. **Eat'ing t.,** lupus. **Hon'eycomb t.,** porrigo favosa. **Hu'mid t.,** eczema impetigo. **Milk'y t.,** porrigo larvalis. **Moist t.,** eczema. **Pus'tular t.,** impetigo. **Run'ning t.,** impetigo. **Sca'ly t.,** psoriasis.

**Tet'terwort.** Chelidonium majus.

**Teucrin'.** See *Teucrium scordium.*

**Teu'crium ægypti'acum.** T. capitatum. **T. be'lium,** T. capitatum. **T. canaden'se,** American germander or woodsage; aromatic and stimulant indigenous herb. **T. capita'tum,** poly mountain of Montpellier, ord. *Labiatæ,* is generally substituted for T. chamædrys. The common poly mountain is the Teucrium montanum; and the golden poly mountain the Teucrium polium, polion. **T. chamæ'drys,** common, creeping, or small germander, English treacle; plant possessed of aromatic and bitter properties. **T. chamæ'pitys,** common groundpine; properties like the last; the tops and leaves have been recommended as aperients and tonics, especially in female obstructions and in paralytic disorders. **T. cre'ticum,** poly mountain of Candy; the tops and whole herb enter into the old compounds mithridate and theriaca. It is placed among the aperients and corroborants. **T. fla'vum** has similar properties to T. chamædrys. **T. hyssopifo'lium,** T. creticum. **T. i'va,** French groundpine; it has similar properties to T. chamæpitys, but is weaker. **T. marit'imum,** T. marum. **T. ma'rum,** Syrian herb mastich, cat thyme; a very aromatic plant of a camphorated smell; formerly much used in medicine as a tonic, antispasmodic, emmenagogue, etc. **T. officina'le,** T. chamædrys. **T. palus'tre,** T. scordium. **T. po'lium,** used in the East for cholera. **T. pyramida'le,** ajuga. **T. rosmarinifo'lium,** T. creticum. **T. scor'dium,** water germander, woodsage; the leaves have a garlicky smell and bitterish, slightly pungent taste; it has the tonic properties of other teucria; the principle *teucrin,* derived from it, has been employed subcutaneously in cold tuberculous abscesses, tuberculous infiltrations, etc.

**Tex'as fe'ver** or **T. cat'tle fe'ver.** Specific infectious disease affecting horned cattle, the lesions being inflammation of the fourth stomach and engorgement of the spleen; it is caused by the presence of a blood parasite, Pyrosoma bigeminum, which is inoculated by means of the tick. **T. mange,** prairie itch. **T. rhat'any,** root of Krameria secundiflora. **T. sarsaparil'la,** Menispermum canadense. **T. snake'root,** Aristolochia reticulata.

**Text-blind'ness.** Word-blindness, or inability to appreciate written or printed words.

**Tex'tural.** Relating to a texture.

**Tex'ture** (*texo,* to weave). Particular arrangement of the tissues that constitute an organ.

**Tex'tus.** Texture; tissue. **T. cellulo'sus,** cellular tissue. **T. desmo'sus,** desmoid tissue. **T. erecti'lis,** erectile tissue. **T. nervo'rum,** plexus nervorum. **T organ'icus,** cellular tissue. **T. papilla'ris,** corpus papillare. **T. parenchyma'lis,** cellular tissue.

**Thalamenceph′alon** (*thalamos*, bed, *en*, in, *kephale*, head). Portion of the embryonic brain developed from the posterior division of the anterior cerebral vesicle; interbrain; it includes the optic thalami, pituitary body, pineal gland, and optic nerves.

**Thal′ami cor′porum cavernoso′rum pe′nis.** See *Cavernous bodies.* **T. op′tici,** optic thalami, posterior cerebral ganglia, two rounded, irregular surfaces seen exposed in the lateral ventricles of the brain and in the third ventricle, the inferior surface of which presents two projections, called corpora geniculata, that furnish several filaments to the optic nerves. The name was given from a belief that the optic nerves originate from them. They, however, arise more posteriorly from the corpora quadrigemina or optic lobes and adhere merely to the inner margin of those lobes. From the thalami and corpora striata fibres proceed upward to constitute the convolutions of the brain and the various bands that connect the different parts of the brain together. The upper and inner parts of the thalami are so closely connected as to form one continued surface, called *commissura mollis*. The posterior parts turn downward and upward, after which they are elongated to form the two white cords termed *tractus optici*.

**Thal′amic ep′ilepsy.** A variety of epilepsy believed to have its origin in disease of the optic thalamus. **T. nu′clei,** two collections of gray matter in the optic thalami.

**Thal′amocœle** (*thalamus*, *koilia*, cavity). Third ventricle.

**Thalamocor′tical.** Relating to or connecting the optic thalamus and the cortex cerebri.

**Thalamolentic′ular.** Relating to or connecting the optic thalamus and the lenticular nucleus.

**Thal′amus** (*thalamos*, room or chamber, bed). The place in which a nerve originates. **T. op′ticus,** see *Thalami optici.* **T. rega′lis,** pericardium.

**Thalassopho′bia** (*thalassa*, ocean, *phobos*, fear). Excessive fear of the ocean.

**Thalassother′apy** (*thalassa*, sea, *therapeuo*, to cure). Treatment by residence at the seashore, by sea-voyage, or other exposure to the influence of salt air.

**Thalic′tron.** Meadow rue, poor man's rhubarb, ord. *Ranunculaceæ*. The root resembles rhubarb in its properties.

**Thallin′.** $C_{10}H_{13}NO$. Tetrahydroparoxymethylquinolin. Oily, odorous liquid, the synthetically produced sulphate and tartrate of which have been used for their antipyretic and antiseptic properties. They are yellowish-white, crystalline powders, and used both externally and internally. **T. ac′etate,** used in night-sweats of phthisis; dose, gr. iss (0.1). **T. hydrochlo′ride,** used like the sulphate. **T. peri′odide,** used in cancer; dose, gr. ss (0.032). **T. periodosul′phate,** t. periodide. **T. sal′icylate** has the properties of its ingredients. **T. sul′phate,** soluble, white crystalline powder; antiseptic and antipyretic, but transitory in its effects on the system. **T. tar′trate,** similar in its action to the sulphate.

**Thalliniza′tion.** Maintaining continuously the transient effect of thallin, by hourly repetition of the dose.

**Thal′lium.** Metal, symbol Tl, found in certain seleniferous and telluriferous deposits, in the native sulphur of Lipari, etc., and resembling lead physically in its aspect, color, density, etc., as well as in its toxic action on the economy. The salts of thallium, especially the nitrate, are very soluble. **T. sul′phate,** a salt of thallium employed in cystitis in 1 per cent. solution.

**Thal′lochlor.** Variety of chlorophyll existing in lichens.

**Thal′lus** (a shoot). Condition of the filaments of a fungus when, by excessive multiplication and interweaving, they become matted together.

**Thamu′ria** (*thama*, often, *ouron*, urine). Frequent urination.

**Than′atic** (*thanatos*, death). Relating to death.

**Thanato′des.** Mortal.

**Thanatognomon′ic** (*thanatos*, death, *gignosko*, to know). Characteristic of death, as a thanatognomonic sign.

**Than′atoid** (*thanatos*, death, *eidos*, resemblance). Resembling death. Apparently dead.

**Than′atol.** Guaiacol ethyl.

**Thanatolog′ical.** Relating to thanatology.

**Thanatol′ogy** (*thanatos*, death, *logos*, a discourse). Science in its relation to death.

**Thanatoma′nia.** Mania for death; suicidal mania.

**Thanatom′eter** (*thanatos*, death, *metron*, measure). Thermometer introduced into the body as a means of determining, by the reduced temperature, the occurrence of death.

**Thanatophid′ia** (*thanatos*, death, *ophis*, serpent). Poisonous serpents whose bites are fatal.

**Thanatopho′bia** (*phobos*, dread). Morbid fear of death.

**Thanato′sis.** State of death. Mortification; gangrene.

**Than′atus** (*thanatos*). Death.

**Thane's meth′od.** In operating upon the brain, when it becomes necessary to locate the fissure of Rolando, the superior end of the latter will be found half an inch behind the middle point of a line drawn from the root of the nose to the occipital protuberance.

**Thap′sia.** Deadly carrot, family *Umbelliferæ*. The bark of the root is a violent cathartic and emetic. **T. gargan′ica,** root of a North African plant used as a counterirritant. **T. plas′ter,** composed of yellow wax, Burgundy pitch, terebinthina cacta, Venice turpentine, glycerin, and thapsia resin. **T. res′in,** prepared by digesting thapsia root in hot alcohol. **T. silph′ium,** North African plant; 6 to 10 grains (0.4–0.65) of the powder produce several alvine evacuations.

**Thap′sium actæifo′lium.** Ligusticum actæifolium. **T. atropurpu′reum,** roundheart. **T. barbino′de,** meadow parsnip, an indigenous plant of the Northern and Western States. Both these plants have been esteemed vulnerary, antisyphilitic, diaphoretic, and antidotal to the bite of a rattlesnake. **T. corda′tum,** T. atropurpureum.

**Thap′sus barba′tus.** Verbascum nigrum.

**Thau′matrope** (*thauma*, wonder, *trope*, change). Revolving instrument containing figures which blend when the instrument is in motion. It shows the duration of visual impressions.

**The′a.** Tea. There are two principal varieties of tea-plant or Thea sinensis, the Thea bohea and Thea viridis, the black tea and the green; ord. *Camelliaceæ*. Tea is astringent, and gently excitant in nervous headache, etc. By analogical transference the word has been used almost synonymously with infusion—as beef tea, mint tea, etc. **T. german′ica,** veronica.

**The′aism.** Theism.

**Thebaï′na.** $C_{19}H_{21}NO_3$. Thebaïne; alkaloid of opium, resembling somewhat strychnine in its action; dose, gr. iss (0.1).

**The′baism.** Poisoning by or addiction to thebaïne.

**Thebe′sius, veins of.** Name given to supposititious branches of the coronary veins, described as opening into the heart by small depressions observable in the right auricle, and which have been called foramina Thebesii. No such veins can be demonstrated. The valve at the orifice of the coronary vein, in the right ventricle, is called valvula Thebesii, valvula Guiffartiana, valvula venæ magnæ, valve of Thebesius.

**Thebolac′tic acid.** Acid found in opium, identical with lactic acid.

**The′ca** (*theke*, a box). Case; vagina; sheath. **T. cer′ebri,** cranium. **T. cor′dis,** pericardium. **T. follic′uli,** see *Folliculi Graafiani.* **T. vertebra′lis,** see *Vertebral canal.*

**The′cal** (*theca*, a sheath). Relating to a sheath. **T. ab′scess,** abscess in the sheath of a tendon.

**The′cate.** In a sheath. Having a sheath.

**Theci′tis.** Inflammation of the sheath of a tendon.

**The′codont.** Having teeth enclosed in alveoli.

**Thecoso′ma** (*theca*, sheath, *soma*, body). Distoma hæmatobium.

**Thecostegno′sis** (*theke*, sheath, *stegnoo*, to constrict). Contraction of a tendon sheath.

**Theïne′.** $C_8H_{10}N_4O_2$. Crystallizable principle from thea, having the same composition as caffeine.

**Thei′on.** Sulphur.

**The′ism.** Condition caused by drinking tea to excess.

**Thelal′gia** (*thele*, nipple, *algos*, pain). Pain in the nipple.

**Thela′sis** or **Thelas′mus** (*thelazo*, to give suck). Lactation.

**The′le.** Mamma; nipple.

**Theli′tis** (*thele*, nipple). Inflammation of nipple.

**The′lium** (*thele*, nipple). Papilla-layer of cells.

**Thelon′cus** (*thele*, nipple, *onkos*, a swelling). Tumor or swelling of the breast.

**Thelophlebostem′ma** (*thele*, nipple, *phleps*, a vein, *stemma*, a wreath). Venous circle formed by the union of veins around the nipple.

**Thelorrha′gia.** Hemorrhage from the nipple.

**Thelosteophy′tum.** Nipple-shaped osteophyte.

**Thel′othism** (*thele*, nipple, *otheo*, to thrust). Projection of the nipple.

**Thel′yblast** (*thelys*, female, *blastos*, a bud). Female gonoblast; the female element in generation.

**Thelygo′nia** (*thelys*, female, *gone*, generation). The part taken by the female in the act of generation. The procreation of female children.

**Thelyp′teris.** Pteris aquilina.

**Thelyto′cia** (*thelys*, female, *tokos*, birth). Parthenogenesis with female eggs only.

**The′nad.** Toward the palm or thenal aspect.

**The′nal.** Thenar. Relating or appertaining to the thenar. **T. as′pect**, palmar aspect toward the side on which the thenar is situated.

**The′nar** (*thenar*, the flat of the hand). The palm of the hand or sole of the foot. Flexor brevis pollicis manûs. Palm. Also adjectively, thenal. **T. em′inence**, the projection at the anterior and outer part of the hand formed by the abductor brevis, opponens, and flexor brevis pollicis. **T. mus′cle**, fleshy mass, formed of the abductor brevis, opponens pollicis, and the inner part of the flexor brevis pollicis. In the foot the name is applied to the abductor and flexor brevis pollicis pedis.

**Theobro′ma** (*theos*, god, *broma*, food). Cacao.

**Theobromine′.** $C_7H_8N_4O_2$. Alkaloid from the seeds of Theobroma cacao, homologous with caffeine, but more bitter and less soluble. White powder, with therapeutic properties similar in many respects to caffeine. **T. i′odide**, iodotheobromine; white, soluble powder; diuretic; dose, gr. viij (0.5); it also increases arterial pressure. **T. lith′ium sal′icylate**, urotropin. **T. sal′icylate**, used as a substitute for diuretin. **T. so′diosal′icylate**, diuretin; dose, gr. x–xx (0.65–1.3).

**Theolin′.** Distillate from an American species of pine; used as a substitute for benzine.

**Theoma′nia** (*theos*, god). Demonomania.

**Theophylline′.** Alkaloid from tea, isomeric with theobromine.

**Theople′gia** (*theos*, god, *plege*, a stroke). Apoplexy.

**Theoplex′ia** (*plesso*, to strike). Apoplexy.

**Theoret′ical** (*theoreo*, to contemplate). That which is confined to theory or connected with it. Also applied to a sect of physicians who founded their doctrine chiefly on reasoning.

**The′ory.** The speculative part of a science; the connection established in the mind between a general fact or a small number of general facts, and all the particular facts dependent thereon. Hypothesis. **Atom′ic t.**, **Cohn′heim's t.**, **Darwin′ian t.**, etc., see the qualifying words.

**Therapeu′sis.** Therapeutics.

**Therapeu′tic** or **Therapeu′tical.** Relating or appertaining to therapeutics.

**Therapeu′tics** (*therapeuo*, to heal). That part of medicine the object of which is the treatment of disease. A treatise on medical treatment.

**Therapeu′tist.** One specially trained in the treatment of disease.

**Ther′apy.** Therapeutics. Treatment of disease.

**Therenceph′alus** (*ther*, beast, *kephale*, head). Skull whereof the angle made by lines from the inion and nasion to hormion measures from 116° to 129°.

**The′riac** or **Theri′aca** (*ther*, a ferocious or venomous animal). Treacle, molasses. Medicine believed to be capaple of curing or preventing the effects of the bite of a venomous animal. Theriac and theriacal have been used adjectively for medicinal. **T. Androm′achi**, Venice treacle; an ancient alexipharmic electuary, supposed to antidote all poisons, consisting of 61 different ingredients, which possessed the most opposite properties; invented by Andromachus of Crete, and prepared by order of Nero. **T. articulo′rum**, colchicum. **T. celes′tis**, tinctura opii. **T. commu′nis**, molasses. **T. edinen′sis**, confectio opii. **T. germano′rum**, an extract or rob prepared from juniper berries; used as a stomachic. **T. londinen′sis**, a cataplasm of cumin seed, bay berries, germander, snakeroot, cloves, honey, and sometimes opium or syrup of poppies. **T. rustico′rum**, allium.

**Theriat′rica** (*ther*, an animal, *iatreia*, medicine). Veterinary medicine.

**Theriomim′icry.** Imitation of an animal.

**Theriother′apy.** Veterinary therapeutics.

**Theriot′omy.** Zoötomy.

**Therm** (*therme*, heat). Unit of heat; amount of caloric necessary to raise a gramme of water through 1° C.

**Ther′mæ.** Warm baths or springs.

**Thermæsthe′sia** (*therme*, heat, *aisthesis*, sensation). Sensation of heat. An instrument for measuring the sensibility of various parts of the skin to heat is called a *thermæsthesiometer*.

**Ther′mal** (*therme*). Relating to heat. Hot, warm, as a thermal mineral water. **T. anæsthe′sia**, thermoanæsthesia. **T. atax′ia**, loss of heat-regulating power of the body. **T. fe′ver**, form of fever occurring during treatment by hot baths. **T. ham′mer**, see *Hammer*. **T. sense**, special division of sensation by which temperature is appreciated. **T. springs** or **wa′ters**, thermæ.

**Thermalge′sia** (*therme*, heat, *algos*, pain). Condition in which pain is caused by the application of heat.

**Thermanæsthe′sia.** Thermoanæsthesia.

**Therman′tica** (*thermantika*). Calefacients.

**Therman′tidote.** Febrifuge.

**Therma′sia** (*thermaino*, to grow warm). Heating.

**Thermas′ma.** Fomentation.

**Thermatol′ogy.** The study of the application of heat, especially of hot mineral springs, in the treatment of disease.

**Ther′mic** (*therme*). Relating to heat. **T. fe′ver**, sunstroke.

**Thermifugin′.** Methyl-trihydroxylquinolin-carbonate of sodium. Crystalline substance having antipyretic properties.

**Thermin′.** $C_{10}H_{11}NH_2$. Tetrahydrobetanaphthylamin. A liquid employed as a mydriatic; produced by acting on a solution of betanaphthylamin in amyl alcohol with metallic sodium.

**Thermoæsthe′sia.** Thermæsthesia.

**Thermoanæsthe′sia.** Loss of a part or whole of the thermal sense, or a perversion of it, noticed in hysteria and syringomyelia and other affections dependent on lesions of the cord involving the lateral columns.

**Thermocauterec′tomy.** Excision or extirpation by the thermocautery.

**Thermocau′tery** (*thermos*, hot, *kauter*, a burner). Actual cautery, especially the Paquelin cautery; see *Cautery*.

**Thermochem′istry.** The study of the mutual relations and reactions of chemistry and heat.

**Thermochro′ic** (*therme*, heat, *chroa*, color). Reflecting certain refrangible heat-rays, and absorbing or transmitting other rays.

**Thermoch′roism.** Condition of being thermocroic.

**Thermodin′.** $C_{13}H_{17}NO_4$. Acetylparaethoxyphenylurethane. A white, crystalline powder, a derivative of urethane. Antipyretic.

**Ther′moelec′tric.** Relating to electricity produced by heat. Generating electricity by heat. **T. pile,** collection of bars of metal soldered together; when heated, an electric current is developed which moves an index that accurately registers the amount of heat.

**Ther′moelectric′ity.** Development of electricity through the action of heat.

**Ther′mogen.** Instrument or apparatus for keeping up the temperature of the body during an operation.

**Thermogen′esis** (*therme,* heat, *genesis,* production). The production or generation of heat.

**Thermogenet′ic** or **Thermogen′ic** (*therme,* heat, *gennao,* to beget). Heat-forming.

**Thermog′enous.** Produced by heat.

**Ther′mograph** (*therme,* heat, *grapho,* to write). Instrument for the registration of variations of temperature.

**Thermohyperæsthe′sia.** Abnormal acuteness of the sense of temperature.

**Thermohyperalge′sia** (*therme,* heat, *algesia,* sensation of pain). Painful sensation—not sense of temperature—from contact with a hot or cold body.

**Ther′mo-inhib′itory.** That which prevents excessive heat production. Applied theoretically to a portion of the nervous system.

**Thermolab′ile.** Destroyed or altered by heat.

**Thermol′ysis** (*therme,* heat, *lysis,* loosening). Diminution of heat, especially animal heat. Chemical disintegration under the influence of heat.

**Thermolyt′ic.** Heat-discharging. Relating to thermolysis.

**Thermom′eter** (*therme,* heat, *metron,* measure). An instrument with graduated scale for measuring the degree of heat. Mercury is generally used as the liquid in the tube, and several thermometers with differently graduated scales are employed. The Centigrade scale starts with the freezing point of water at 0° and the boiling point at 100°. Réaumur's scale takes the freezing point at 0° and the boiling point at 80°. The Fahrenheit scale has the freezing point at 32° and the boiling point at 212°. To convert the degrees of any one of them into degrees of one or both of the other scales it must be borne in mind that the zero of the two scales—Centigrade and Réaumur—corresponds with the freezing point of water, or 32° on the Fahrenheit scale. The boiling point of water being respectively 100° on the Centigrade scale, 80° on that of Réaumur, and 212° on that of Fahrenheit, it will be seen that the degrees intervening between the two standard points of the scale amount to 100 on the Centigrade scale, 80 on that of Réaumur, and 180 on that of Fahrenheit. This establishes the following ratio of comparison of the three thermometers:

180 : 100 : 80 :: 9 : 5 : 4.

When the Fahrenheit scale is in question, 32° must be added or subtracted, as is clearly shown in the table opposite.

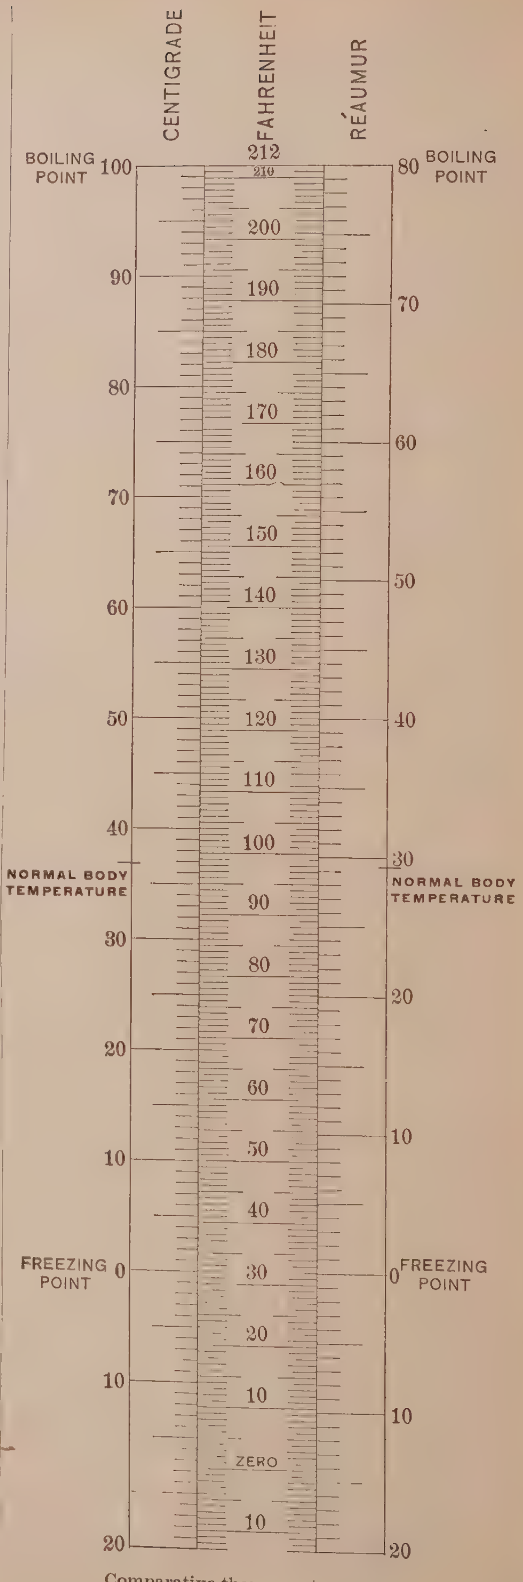
The following condensed rules will aid in making an accurate conversion of the three scales, Fahrenheit, Celsius or Centigrade, and Réaumur.

### RULES FOR CONVERSION OF THERMOMETRIC SCALES.

C. = Centigrade.
D. = Degree cited.
F. = Fahrenheit.
R. = Réaumur.

| | If above freezing-point of water (32° F., 0° C., 0° R). | If below freezing-point, and above zero F. (—17.77° C., —14.22° R.). | If below zero F. (—17.77° C., —14.22° R. |
|---|---|---|---|
| C. into F. | $D \times 9 \div 5 + 32$ | $32 - (D \times 9 \div 5)$ | $-(D \times 9 \div 5) - 32$ |
| R. " F. | $D \times 9 \div 4 + 32$ | $32 - (D \times 9 \div 4)$ | $-(D \times 9 \div 4) - 32$ |
| F. " C. | $D - 32 \times 5 \div 9$ | $-(32 - D) \times 5 \div 9$ | $-(D + 32) \times 5 \div 9$ |
| F. " R. | $D - 32 \times 4 \div 9$ | $-(32 - D) \times 4 \div 9$ | $-(D + 32) \times 4 \div 9$ |

C. into R. (all temperatures) $D \times 4 \div 5$.
R. " C. " " $D \times 5 \div 4$.



Comparative thermometer scales.

The following table gives a comparative view of the two scales generally in use, the Centigrade and the Fahrenheit, which will be found useful for immediate reference (*Stillé and Maisch*):

TABLE FOR COMPARING DEGREES OF THE CENTIGRADE AND FAHRENHEIT THERMOMETERS.

| CENT. | FAHR. | CENT. | FAHR. | CENT. | FAHR. | CENT. | FAHR. | CENT. | FAHR. |
|---|---|---|---|---|---|---|---|---|---|
| —40° | —40.0° | +21° | + 69.8° | + 81° | +177.8° | +141° | +285.8° | +201° | + 393.8° |
| 39 | 38.2 | 22 | 71.6 | 82 | 179.6 | 142 | 287.6 | 202 | 395.6 |
| 38 | 36.4 | 23 | 73.4 | 83 | 181.4 | 143 | 289.4 | 203 | 397.4 |
| 37 | 34.6 | 24 | 75.2 | 84 | 183.2 | 144 | 291.2 | 204 | 399.2 |
| 36 | 32.8 | 25 | 77.0 | 85 | 185.0 | 145 | 293.0 | 205 | 401.0 |
| 35 | 31.0 | 26 | 78.8 | 86 | 186.8 | 146 | 294.8 | 206 | 402.8 |
| 34 | 29.2 | 27 | 80.6 | 87 | 188.6 | 147 | 296.6 | 207 | 404.6 |
| 33 | 27.4 | 28 | 82.4 | 88 | 190.4 | 148 | 298.4 | 208 | 406.4 |
| 32 | 25.6 | 29 | 84.2 | 89 | 192.2 | 149 | 300.2 | 209 | 408.2 |
| 31 | 23.8 | 30 | 86.0 | 90 | 194.0 | 150 | 302.0 | 210 | 410.0 |

Réaumur's scale is rarely employed, and its comparative degrees are not therefore inserted here. The conversion from Réaumur degrees to the degrees of the other scales can be made by the rules given. See the comparative scale.

The *clinical thermometer* is one used by medical men to test the temperature of the body in cases of fever, covering only a certain number of degrees above or below the normal temperature. Normal and abnormal temperatures may be thus classified (Finlayson):

|  |  |  |  |
|---|---|---|---|
| Below | 35° Cent. | = 95° Fahr | Very low or collapse temperatures. |
|  | 36 “ | = 96.8 “ |  |
| About | 36½ “ | = 97.7 “ | Subnormal temperatures. |
| **Normal** | **37** “ | = **98.6** “ | **Normal temperature.** |
| About | 37½ “ | = 99.5 “ | Slightly above normal, or subfebrile temperatures. |
|  | 38 “ | =100.4 “ |  |
|  | 38½ “ | =101.3 “ |  |
| About | 39 “ | =102.2 “ | Moderately febrile temperatures. |
|  | 39½ “ | =103.1 “ |  |
| About | 40 “ | =104 “ | Highly febrile temperatures. |
|  | 40½ “ | =104.9 “ |  |
| Above | 41 “ | =105.8 “ | Hyperpyretic temperatures. |

The clinical thermometer is usually applied under the tongue, the lips being closed about it, and retained in that position for several minutes by the patient. It is sometimes applied in the axilla, the arm being held close to the side, but the insertion into the rectum or vagina gives the most accurate results; the temperature so taken is usually higher than that shown by the thermometer in the axilla or under the tongue. When the temperature is taken in the rectum or vagina care must be taken to prevent the thermometer from slipping into the cavity. For comparison, the same hour each day should be chosen.

**Thermomet'ric.** Relating to a thermometer.

**Thermom'etry.** Application of the thermometer in diseases.

**Thermoneuro'sis** (*therme*, heat, *neuron*, nerve).

Elevation of temperature due to vasomotor condition, and not due to fever.

**Thermon′osus** (*therme*, heat, *nosos*, disease). Disease produced by heat.

**Thermopalpa′tion.** Palpation practised with the idea of obtaining some knowledge of the temperature of the body.

**Ther′mophile.** Flourishing under high temperatures, as *t. bacteria.*

**Thermophil′ic** (*therme*, heat, *phileo*, to love). Growing at a high temperature, such as 70° to 75° C. A term applied to bacteria which develop at a high temperature, such as 40° to 70° C. They include many soil bacteria and almost exclusively spore-bearing bacilli.

**Ther′mopile.** See *Thermoelectric pile.*

**Thermople′gia** (*therme*, heat, *plege*, stroke). Heat-stroke.

**Thermopolypnœ′ic** (*polys*, many, *pnoe*, breath). Producing rapid breathing or panting by the application of heat.

**Thermoreg′ulator.** Thermostat.

**Ther′moscope** (*therme*, heat, *skopeo*, to examine). Instrument for determining differences in temperature, but not registering the amount of heat.

**Thermosta′ble.** Unaltered by heat.

**Ther′mostat** (*therme*, heat, *histemi*, to stand). Automatic apparatus for maintaining constant temperature. the expansion or contraction of a metal bar or other body, under the influence of the varying temperature, controlling the source of heat.

**Thermosystal′tic** (*therme*, heat, *systaltikos*, adapted for contracting). Term applied to a muscle which is influenced in its contraction by heat and cold.

**Thermotac′tic** or **Thermotax′ic** (*tasso*, to arrange). Regulating the temperature of the body, as *t. centre.*

**Thermotax′is** (*therme*, heat, *taxis*, arrangement). Regulation of the temperature of the body. Heat-regulating mechanism. Attraction of microorganisms toward a warm body.

**Thermother′apy** (*therme*, heat, *therapeia*, treatment of disease). Treatment by means of heat, and especially of hot air.

**Ther′omorph.** A part or an individual the subject of theromorphia.

**Theromor′phia** (*ther*, beast, *morphe*, form). Anomalous arrangement of the structure of parts of the human body similar to that normally present in lower animals.

**The′sis** (*thesis*, a proposition). Inaugural dissertation. The name usually given to the essay composed by a candidate for graduation in medicine.

**Theve′tia ahoua′i** (after Andrew Thevet, a French monk). Ahouái. The kernels of the nut of this Brazilian tree are said to be violent poison. In the Antilles its nuts are called noix de serpent, and are used against the bites of serpents. **T. nerifo′lia,** yellow oleander, exile tree; common tree in the gardens of Southern India; has acrid properties, and has been given in tincture prepared from the bark as an antiperiodic in intermittent fever. **T. yccot′li,** native tree of Mexico, having poisonous seeds, and used as an ointment for piles.

**Thevetin′.** White, crystalline, or powdery glucoside obtained from Thevetia yccotli.

**Thi-.** Prefix of sulphur compounds.

**Thial′dehyde.** Sulphaldehyde.

**Thialdin′.** $C_{10}H_{13}NS_2$. Volatile, crystallized substance made by the action of sulphureted hydrogen on aldehyde ammonia. Cardiac stimulant.

**Thial′ion.** A proprietary remedy employed to counteract the uric acid diathesis.

**Thiasinam′ine.** A white, crystalline substance made from mustard oil by heating with alcohol and ammonia. It is used in lupus, for the removal of scar tissue in the cornea and elsewhere, and in chronic joint affections.

**Thicklist′ed.** Pursy.

**Thiersch's meth′od.** Skin-grafting by the application of long, broad strips of skin to a surface from which granulations have previously been removed. **T.'s solu′tion,** antiseptic wash, consisting of salicylic acid 2 parts, boric acid 1½ parts, water 1000 parts.

**Thieves' vin′egar.** Acetum aromaticum.

**Thigh.** The part of the lower limb which extends from the pelvis to the knee. Femur, femen; of old, femur meant the thigh generally, and especially the outer part; femen, the inner part. **Neck of the t.,** long, narrow, and oblique portion of the thigh-bone separating the head from the two trochanters.

**Thigh-bone.** Femur.

**Thilanin′.** Combination of sulphur (3 per cent.) and lanolin, applied externally in eczema, herpes, and sycosis.

**Thim′bleberry.** Fruit of Rubus occidentalis.

**Thim′bleweed.** Rudbeckia laciniata.

**Thi′o-acid.** A sulphur-acid.

**Thio-al′cohol.** Mercaptan.

**Thi′ocol.** Potassium salt of guaiacol sulphonic acid. Soluble, white powder, non-irritating to the mucous membranes. Dose, ʒij–iv (8.0–16.0).

**Thiocyan′ic acid.** CNHS. Sulphocyanic acid. Its salts are *thiocyanates;* called also sulphocyanates and sulphocyanides. *Potassium thiocyanate,* CNKS, is found in saliva. *Allyl thiocyanate,* $C_3H_5CNS$, is the scientific name of oil of mustard.

**Thio-e′ther.** Ether in which oxygen is replaced by sulphur. Sulphuric ether.

**Thi′oform.** Bismuth dithiosalicylate. A yellow powder; used as a substitute for iodoform; prepared by adding a solution of bismuth trinitrate to a solution of sodium dithiosalicylate. See *Dithiosalicylic acid.*

**Thiogen′ic** (*thion*, sulphur, *gennao*, to produce). Generating sulphur. A term applied to bacteria which convert sulphureted hydrogen into higher sulphur compounds.

**Thi′ol.** Product of the treatment of brown-colored paraffin or gas oils at high temperature with sulphur. There are two thiols—a thin, watery extract, liquid thiol, and one evaporated to dryness, dry thiol. Employed in the treatment of skin diseases, acute and chronic scrofulous ulcers, endometritis, etc. It is applied in powder, collodion, solution in water or glycerin, ointment, plaster, etc.; internally in pills or chocolate.

**Thiolin′** or **Thiolin′ic acid.** A green, consistent mass produced by boiling together linseed oil and sulphur; it has a therapeutic action similar to that of thiol and ichthyol. Sodium thiolinate is employed.

**Thi′on.** Sulphur.

**Thion′ic.** Relating to sulphur

**Thio-oxydiphen′ylamine.** Sulphaminol.

**Thi′ophen.** $C_4H_4S$. Colorless, oily liquid derived from coal-tar benzene; not important therapeutically; its derivatives, *sodium thiophen sulphonate* and *thiophen diiodide,* are used instead; the former is a white powder containing 33 per cent. of sulphur; the latter contains 9.5 per cent. The sodium salt has been used in prurigo; the diiodide as a substitute for iodoform in cancer or inflammation of the breast, caries, and phlegmonous inflammations.

**Thioresor′cin.** $C_6H_4(OS)_2$. Gray powder, allied in composition to resorcin and replacing it. Used as a substitute for iodoform in ulcers of the leg.

**Thiosalicyl′ic acid.** Produced by the action of nitrous acid and hydrosulphuric acid on amidobenzoic acid, having antiseptic action similar to that of salicylic acid.

**Thiosa′pol.** A soap in which sulphur enters as the important ingredient.

**Thiosav′onal.** Potash soap containing sulphur in chemical combination.

**Thiosinam′ine.** $C_4H_8N_2S$. Allylsulphocarbamide. Made by heating together allyl mustard oil, absolute alcohol, and solution of ammonia. Used hypodermically in lupus.

**Thiosulphu′ric acid.** $H_2S_2O_3$. Sulphuric acid in which oxygen is partly substituted by sulphur. Hyposulphurous acid. The salts are *thiosulphites* or *hyposulphites.*

**Thi′othrix.** A genus of bacteria containing sulphur. **T. ni′vea,** Beggiatoa nivea. **T. ten′uis** (Winogradsky), in sulphur natural waters. **T. tenuis′sima** (Winogradsky), in sulphur natural waters.

**Thio-ure′a.** Thiurea.

**Thioxydiphen′ylamine.** Sulphaminol.

**Third cra′nial nerve** or **t. pair.** Motor oculi nerve.

**Thirst.** A desire for or absolute need of liquids. It is an expression of the wants of the system, a supply of fluid being required to compensate for the numerous losses that are constantly taking place. **Exces′sive t.,** polydipsia. **Morbid t.,** polydipsia.

**Thirst′y.** Affected with thirst.

**Thi′ry's fis′tula.** Artificial fistula in the abdomen, made in order to obtain pure intestinal juice from some specially localized portion of the bowel.

**This′tle.** A plant of the genus *Carduus* or *Cnidus.* **Bless′ed t.,** Centaurea benedicta. **Cot′ton t.,** Onopordium acanthium. **Globe t.,** echinops. **Ho′ly t.,** Centaurea benedicta. **La′dies' t.,** Carduus marianus. **Milk t., com′mon,** Carduus marianus. **Pine t.,** Atractylus gummifera. **Sow t.,** Sonchus oleraceus. **Star t.,** Centaurea calcitrapa. **Yel′low t.,** Argemone mexicana.

**Thiure′a.** $CS(NH_2)_2$. Urea in which the oxygen has been substituted by sulphur.

**Thi′uret.** $C_8H_7N_3S_3$. A crystalline powder produced by the oxidation of phenyldithiobiuret; its salts are used as antiseptics and substitutes for iodoform. **T. paracar′bolate** or **parasulphophe′nate,** a yellow, soluble powder, used in skin diseases as a substitute for iodoform.

**Thlad′ias** (*thlao,* to crush). Eunuch.

**Thlap′sis depres′sio** (*thlao,* to break). Depression; melancholy.

**Thla′sis** or **Thlas′ma.** Contusion. **T. concus′sio,** concussion. **T. depres′sio,** depression. **T. strem′ma,** sprain.

**Thlas′pi.** Pennycress, ord. *Cruciferæ.* Two species of thlaspi are directed in some pharmacopœias for medical use: Thlaspi arvense, or treacle mustard, and Thlaspi campestre or hirsutum or vulgatius, mithridate mustard. The pharmaceutical properties of both kinds resemble those of common mustard. **T. bur′sa** or **bursa′tum,** bursa pastoris, shepherd's purse, cocowort, St. James's wort, poor man's parmacity; a common European plant introduced into this country; slightly astringent. **T. nastur′tium** or **T. sati′vum,** Lepidium sativum.

**Thlib′ias** (*thlibo,* to crush). Eunuch.

**Thlipsencepha′lia.** See *Thlipsencephalus.*

**Thlipsenceph′alus** (*thlipsis,* compression, *enkephalos,* the encephalon). A monster in whom the skull is open not merely in the frontal and parietal, but also in the occipital region, a distinct fontanelle not existing; supposed to be due to compression of the fetal head. There is lesion also of the upper part of the vertebral column. The condition is called *thlipsencephalia.*

**Thlip′sis.** Compression, and especially constriction, of vessels by an external cause.

**Tho′ma-Zeiss meth′od.** A method of counting the blood corpuscles by microscopic examination of a drop of diluted blood on a slide marked off in squares.

**Thomp′son's line.** Red line along the edge of the gums, occasionally noticed in tuberculosis of the lungs. **T.'s solu′tion,** a solution of phosphorus, gr. j in ℥iij.

**Thom′sen's disease′.** Myotonia congenita; a disease of the nervous system the chief feature of which is that when one begins the execution of any voluntary movement the muscles brought into play are involuntarily contracted for some seconds. The disease is prone to affect two or more members of the same family. The voluntary muscular fibres become greatly hypertrophied.

**Thomso′nian.** One who practises or believes in Thomsonianism.

**Thomso′nianism.** Thomsonism. A fanciful doctrine, of which a person of the name of Thomson, of New England, was the founder. It taught that minerals were harmful and vegetables beneficial to the human organism, hence medicinal remedies were to be chosen from the latter kingdom; its followers were therefore "botanical physicians" or "herb doctors."

**Tho′racal.** Thoracic.

**Thoracente′sis.** Thoracocentesis.

**Thoracic,** tho-ras′ic (*thorax,* the chest). Relating to the thorax or chest. **T. aor′ta,** see *Aorta.* **T. ar′tery,** the *acromial thoracic* is a short trunk arising from the forepart of the axillary artery. The *alar thoracic* is a small branch which supplies the glands and areolar tissue of the axillary. The *inferior thoracic artery* arises from the axillary and descends vertically over the posterior part of the thorax and the serratus magnus anticus; it becomes subcutaneous and divides into several branches which embrace the breast. The *superior thoracic artery* arises from the axillary artery or from the acromial, and descends forward between the pectoralis major and pectoralis minor, to which it distributes itself by a great number of branches. **T. ax′is,** common trunk of the superior thoracic and acromiothoracic arteries. **T. cage,** bony and ligamentous thorax. **T. cav′ity,** space bounded by the ribs, vertebral column, and diaphragm. **T. duct,** duct of Pecquet, alimentary duct; the duct in which the lymphatics of the lower limbs, abdomen, left superior extremity, left side of the head, neck, and thorax terminate. It begins at the receptaculum chyli, which is formed by the union of five or six large lymphatic trunks, themselves formed from the union of all the absorbent plexuses of the abdomen. It ascends into the chest through the pillars of the diaphragm and by the side of the aorta and vena azygos. It opens at the posterior part of the subclavian vein of the same side. **T. gan′glia,** ganglia of the sympathetic system situated in the cavity of the thorax. **T. gir′dle,** the incomplete ring formed by the clavicles and the scapulæ. **T. glands,** set of lymphatic glands situated on the external thoracic wall. **T. in′dex,** t. ratio. **T. limbs** are the upper limbs, so called because they are articulated with the lateral and upper parts of the chest. **T. nerves,** the short or anterior thoracic nerves are two in number; they arise from the brachial plexus and divide into an anterior and a posterior branch. The long thoracic nerve, posterior thoracic, external respiratory of Sir Charles Bell, is a long branch which arises from the fourth and fifth cervical nerves, immediately after their escape from the intervertebral foramina, and passes downward to be distributed upon the serratus magnus muscle. **T. ra′tio,** that existing between the anteroposterior and lateral diameters of the thorax. **T. re′gions** are the different regions of the chest; thus, we say anterior, lateral, and superior thoracic, etc. **T. veins,** branch emptying into the axillary veins. **T. ver′tebræ,** dorsal vertebræ.

**Thorac′icoabdom′inal re′gion.** That part of the thorax occupied by the arch of the diaphragm and its contents.

**Thorac′icoacro′mial.** Acromiothoracic.

**Thoracispi′nal.** Relating to the thoracic portion of the spine.

**Thoraco-.** In composition, the thorax or chest.

**Thoracocente′sis** (*kentesis,* puncture). Perforation of the chest to evacuate contained fluid, as in empyema.

**Thoracocyllo′sis** (*kyllosis,* a crippling). Deformity of the thorax.

**Thoracocyrto′sis** (*kyrtos,* curved). Abnormal curvature of the thorax.

**Thoracocys′tis.** Thoracystis.

**Thoracodel′phus** or **Thoracodid′ymus** (*adelphos,* brother, or *didymos,* twin). Monstrosity in which twins are united by the thorax.

**Thoracodyn′ia** (*odyne,* pain). Pleurodynia. Pain in the chest.

**Thoracogastrodid′ymus** (*gaster,* the belly, *didymos,* a twin). A monstrosity in which twins are united by the chest and abdomen.

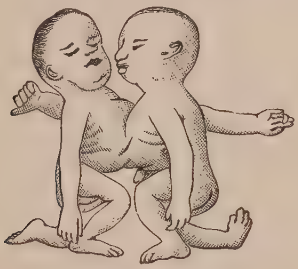
**Thoracogastros′chisis** (*schizo*, to divide). Congenital cleft of the abdominal wall involving the thorax also.

**Thoracom′eter** (*metron*, measure). Stethometer.

**Thoracomonodid′ymus** (*monos*, single, *didymos*, a twin). Thoracodidymus.

**Thoracomyodyn′ia** (*mys*, muscle, *odyne*, pain). Pleurodynia.

**Thoracop′agus** (*pegnymi*, to fasten together). A double monster united at the thorax. **T. tribrach′ius**, one having two of the upper limbs fused. **T. tri′pus**, one having two of the lower limbs fused.



Thoracopagus.

**Thoracop′athy** (*pathos*, disease). Disease or suffering in the chest.

**Tho′racoplasty.** Plastic operation upon the thorax.

**Thoracos′chisis** (*schizo*, to split). Fissure of the thorax.

**Thorac′oscope.** Stethoscope.

**Thoracos′copy.** Stethoscopy.

**Thoracosteno′sis.** Contraction of the thorax.

**Thoracot′omy** (*tome*, incision). Incision into the thorax. Thoracocentesis.

**Thoracys′tis** (*kystis*, a bladder). Encysted dropsy of the chest. Hydatids in the chest.

**Thoradel′phus** (*thorax*, the chest, *adelphos*, brother). Double monstrosity with one head and the trunks united above the umbilicus. There are four lower extremities and two upper.

**Tho′rax** (*thorax*, a cuirass). The chest; one of the splanchnic cavities, bounded posteriorly by the vertebræ, laterally by the ribs and scapulæ, anteriorly by the sternum, above by the clavicles, and below by the diaphragm; lodging and protecting the chief organs of respiration and circulation, the lungs and the heart. The following are the average measurements of the thorax (Vierordt):

### Dimensions and Weight of Thorax (cm.) (Krause).

Sternum: Height (length) . . . 18–20 (man), 16–17 (woman).

| | Length. | Breadth. | Thickness. |
|---|---|---|---|
| Manubrium | 4.6 | up to 6 | 1.5 |
| Body | 11 (man), 9 (woman). | varies. | 0.8 |
| Xiphoid process | varies. | " | 0.2 |

Ribs: Weight (Dursy) (the cartilages are included):

| | |
|---|---|
| 14 true ribs | 472 g. |
| 10 false ribs | 202 g. |

The seventh rib is the heaviest, weighing 52 g. (of which the cartilage weighs 23); the twelfth rib is the lightest, weighing 4 g.

| | |
|---|---|
| Anterior wall (after moderate expiration) | 16–19 (Krause). |
| Posterior wall | 27–30 |
| Lateral wall | 32 |

*(a) Internal Dimensions.*

| | |
|---|---|
| Between incisura sternalis of sternum and first thoracic vertebra | 5– 6 |
| Between the middle of the sternum and sixth thoracic vertebra | 12–15 |
| Between xiphoid process and twelfth thoracic vertebra | 15–19 |
| Between cartilage of the fourth and angle of the seventh rib | 16–20 |
| Transverse diameter between first pair of ribs | 9–11 |
| " " " sixth " " | 20–23 |
| " " " twelfth " " | 18–20 |
| Horizontal circumference in the middle of the height | 65–76 |

*(b) Circumference of Chest.*

Circumference on expiration (cm.):

Middle average: 82 (Fröhlich), the arms in vertical position, below the nipples and close to angle of scapula.

Middle average: 82 (Krug).

" " 81.8 (Fetzer) above nipples and angle of scapula, arms in vertical position.

Middle average: 76–85. Extreme, 70–95.

Average: 82; 76 for women.

The lower circumference of expiration (height of xiphoid process and sixth rib) amounts to 76; in women to 70.

Circumference on inspiration:

Average: 90 (Fröhlich).

" 90.7 (Krug).

" 89 (Fetzer).

Middle average: 86–95. Extreme, 76–100.

In right-handed individuals the periphery of the right side exceeds the left side in size 1–2 cm.; in left-handed individuals the left side equals the right in size, or is only a little larger.

Breadth of thorax (costal or transverse diameter):

| | |
|---|---|
| Men | 25–26 |
| Women | 23–24 |
| Above (*i. e.* the highest point in the axilla) | 25.8 |
| In the middle (height of nipples) | 26.1 |
| Below (xiphoid process and cartilages of sixth rib) | 25.8 |

**Thori′num** or **Tho′rium.** A rare metal, symbol Th, having the appearance of nickel.

**Thorn′apple.** Datura stramonium. **Red t.**, Datura sanguinea.

**Thorn′-headed worms.** See *Acanthacephala.*

**Thorn′ton's sign.** Intense pain in the loins in cases of calculus in the kidney.

**Thorn′waldt's angi′na** or **disease**. Inflammation of Luschka's gland.

**Thor′ough-joint.** Arthrodia; diarthrosis.

**Thor′ough-pin.** A swelling on the knee of the horse's foreleg; also a swelling in the hollow of the hock due to distention of the synovial sheath.

**Thor′oughstem, Thor′oughwax,** or **Thor′oughwort.** Eupatorium perfoliatum.

**Thor′ulus stramin′eus** (a straw pad). A splint of straw, corded and having a central stick for a splint; used for fractures of the thigh or leg.

**Tho′rus.** Semen.

**Thought-read′ing.** Muscle-reading; not direct thought-reading, except by appreciation of involuntary muscular movements of the subject.

**Thought-transfer′ence.** Telepathy.

**Thread′worm.** Oxyuris. Dracunculus. **Long t.**, trichocephalus.

**Three-day fe′ver.** Dengue.

**Three-leaved night′shade.** Trillium.

**Threp′sis** (*trepho*, to nourish). Assimilation; nutrition.

**Threpsol′ogy.** Science of nutrition.

**Thresh′old.** Point at which a stimulus or the difference between two stimuli of different intensities is just perceived. **Au′ditory t.**, the limit below which a given sound is inaudible to the individual. **T. val′ue**, the degree of intensity of a stimulus at which its effects begin to be demonstrable.

**Thrid′ace.** Lactucarium. Obtained by expression from Lactuca sativa.

**Thridacin′.** Lactuca.

**Thrida′cium.** Lactucarium, thridace.

**Thrift, Amer′ican.** Statice caroliniana. **Lav′ender t.**, Statice limonium. **Sea′side t.**, Statice caroliniana.

**Thrill.** Fremitus; also a feeling of vibration felt over an aneurysm and over the heart and great vessels in certain diseases of the heart, etc. **Hydat′id t.**, a peculiar sensation felt on palpating an hydatid tumor, caused by the movement against each other of the numerous small cysts. **Pur′ring t.**, sensation similar to that felt with the hand resting on the body of a purring cat.

**Thrix** (*thrix*). Hair.

**Throat.** The anterior part of the neck; also the fauces and pharynx.

**Throat′root.** Geum virginianum; liatris.

**Throat′wort.** Campanula trachelium.

**Throb.** Pulsation or beat.

**Throb′bing.** Pulsatory, pulsating. A throbbing pain is a kind of pain which is, or seems to be, caused or augmented by the pulsation of arteries.

**Throe.** Agony; labor pains.

**Throm′bin.** Active form of fibrin-ferment in circulating blood. It precipitates fibrinogen as fibrin. The less active form is called *prothrombin*.

**Throm′boarteri′tis.** Arteritis accompanied by thrombosis.

**Thrombocys′tis** (*kystis*, a cyst). The cyst occasionally surrounding a clot of blood, as in encephalic hemorrhage.

**Throm′boid.** Resembling a thrombus.

**Thrombolymphangi′tis.** Inflammation of lymphatic vessels from obstruction.

**Thrombophlebi′tis.** Inflammation of a vein with the formation of a thrombus, or caused by the presence of a thrombus.

**Throm′bose.** Ferment which is supposed to cause coagulation of the blood.

**Thrombosin′.** Substance produced from fibrinogen by the action of nuclein, the latter being formed from the nucleohiston contained in the nuclei of cells.

**Thrombo′sis.** Coagulation; applied especially to coagulation of blood in a blood-vessel. The partial or complete obstruction of any portion of the circulatory apparatus by a morbid product developed in situ. Portions of the coagulum, or thrombus, may be carried onward to cause plugging in other vessels (see *Embolism*). **Maran′tic** or **Maras′mic t.,** t. usually of the cerebral sinuses, coincident with marasmus or generally defective nutrition.

**Thrombo′tic.** Relating to or caused by thrombosis.

**Throm′bus** (*thrombos*, a clot). A coagulum formed during life in any portion of the vascular system where there is obstruction to the circulating blood. Formerly a small, hard, round, bluish tumor, *hæmatoma*, formed by effusion of blood in the vicinity of a vein opened in the operation of bloodletting. **An′nular t.,** a coagulum around the inner wall of a vessel, but not completely blocking up the lumen. **Hæmostat′ic t.,** one due to stagnation of the blood stream. **Laennec′s′ t.,** see *Laennec*. **Lam′inated t.,** one formed by successive depositions of fibrin. **Lat′eral t.,** one attached to one part of the vessel wall and not completely occluding the lumen. **Maras′mic t.,** see *Thrombosis*. **Milk t.,** obstruction caused by accumulation of milk in the mammary gland. **T. neonato′rum,** cephalæmatoma. **Pari′etal t.,** lateral t. **Pel′vic t.,** pelvic hæmatocele. **Strat′ified t.,** laminated t. **T. of vul′va and vagi′na,** pudendal hæmatocele.

**Throt′tle** (dim. of throat). Trachea; also to press powerfully or continuously with the fingers on the throat, so as to endanger or produce apnœa and death; to strangle.

**Through drain′age** or **dress′ing.** Dressing wounds so that the cavity can be drained without disturbing the dressings, a perforated tube being passed through the latter directly into the cavity.

**Through-illumina′tion.** Transillumination. Lighting up of cavities with translucent walls by powerful light transmitted through the latter.

**Throw.** Agony; labor pains.

**Thro′wort.** Leonurus cardiaca.

**Thrush.** Aphthæ of infants. **T. fun′gus,** see *Aphthæ*. **Milk t.,** aphthæ. **White t.,** aphthæ.

**Thryp′sis** (*thrypto*, to break in pieces). Comminution.

**Thryp′tic** (*thrypto*, to break in pieces). Lithontriptic.

**Thu′ja.** Thuya.

**Thuje′tic acid.** Derivative of thujin formed by heating with barium hydrate.

**Thujetin′.** Derivative of thujin.

**Thujigenin′.** Derivative of thujin, formed from alcoholic solution of thujin by heating with dilute hydrochloric or sulphuric acid.

**Thujin′.** Crystallizable, citron-yellow coloring principle obtained from Thuya occidentalis.

**Thumb.** The first finger (counting the fingers as five); or, similarly, the first toe. See *Pollex*.

**Thu′rea** or **T. vir′ga.** Juniperus lycia.

**Thus** (*thus*, incense). Frankincense. See *Pinus abies*. **T. america′num,** see *Pinus sylvestris*. **T. fœmine′um,** see *Pinus abies*. **T. judæo′rum,** Croton cascarilla; styrax; thymiama. **T. libano′tos, T. mas′culum,** or **T. ve′rum,** Juniperus lycia. **T. vulga′re,** see *Pinus abies*.

**Thu′ya.** The fresh tops of *T. occidentalis*. Also the arrangement of the medullary matter of the cerebellum, termed arbor vitæ. **T. aphyl′la,** see *Sandarac*. **T. obtu′sa,** T. occidentalis. **T. occidenta′lis,** American arbor vitæ, tree of life; ord. *Coniferæ;* the leaves and wood were formerly in high repute as resolvents, sudorifics, and expectorants; given in phthisical affections, intermittent fevers, and dropsies; has also been employed internally and externally in the treatment of malignant disease.

**Thuyin′.** Thujin.

**Thylaci′tis** (*thylakos*, a small sac). Gutta rosea.

**Thy′ma.** Ecthyma; thymion.

**Thymacetin′.** White powder, derivative of thymol, closely allied to phenacetin; analgesic and hypnotic in doses of gr. v–x (0.32–0.65).

**Thymasth′ma.** Asthma thymicum.

**Thym′bra.** Satureia hortensis. **T. hispan′ica,** Thymus mastichina.

**Thyme,** time. Thymus. **Cat t.,** Teucrium marum. **Com′mon t.,** thymus. **Gar′den t.,** thymus. **Lem′on t.,** see *Thymus serpyllum*. **Moth′er of t.,** Thymus serpyllum. **Oil of t.,** see *Thymus*. **Virgin′ia t.,** Pycnanthemum linifolium. **Wild t.,** Thymus serpyllum.

**Thymelæ′a.** Daphne gnidium. **T. laure′ola,** Daphne laureola. **T. meze′reum,** Daphne mezereum. **T. monspeli′aca,** Daphne gnidium.

**Thymelco′sis** (*helkos*, an ulcer). Ulceration of the thymus gland.

**Thy′mene.** Hydrocarbon associated with cymene and thymol in thyme.

**Thymhydroquin′one.** Thymohydroquinone.

**Thymiam′a.** A perfume. Muskwood. Bark from Syria, Cilicia, etc., supposed to be the product of the liquid storax tree. It has an agreeable balsamic smell, approaching that of liquid storax.

**Thymi′asis.** Fumigation.

**Thymic,** thi′mic. Having relation to the thymus, as thymic asthma, which may be a form of reflex spasm or due to enlargement of the thymus gland. **T. acid,** acid from adenylic acid, which is derived from the thymus gland. **T. asth′ma,** see *Thymic*.

**Thymic,** ti′mic. Relating to thyme. **T. acid,** thymol.

**Thymin′.** $C_5H_6N_2O_2$. Crystalline substance resulting from decomposition of adenylic acid.

**Thym′ion.** A small wart on the skin resembling a bud of thyme.

**Thymio′sis** or **T. in′dica.** Frambœsia.

**Thymi′tis.** Inflammation of the thymus gland.

**Thy′moform.** Made by the mutual action of thymol and formaldehyde. Used in the same cases as dermatol and iodoform are.

**Thymohydroquin′one.** Form in which thymol, taken by the mouth, appears in the urine.

**Thymol,** ti′mol. (Ph. U. S. and Br.) $C_{10}H_{13}HO$. Thymic acid; thyme camphor. Stearopten from volatile oils of Thymus vulgaris, Monarda punctata, and Carum ajowan, obtained as a solid by refrigeration of the oil, or in the liquid form by treating the essence of thyme (in which it is associated with a hydrocarbon, thymene) with an aqueous solution of an alkali, as soda or potash, and acting on the separated soap with acid, as hydrochloric acid. It is also obtained from other volatile oils. It is antiseptic and a local anæsthetic. Used internally in typhoid fever, rheumatism, fermentation of the stomach and bowels, whooping-cough, etc., in doses of gr. j–iij (0.065–0.2); externally applied to carious teeth and as an ingredient in liniments; to wounds in proportion of 1 part to 1000, and to skin diseases; used also for the preservation of anatomical specimens, etc. It is also employed in gauze, by inhalation, by spraying, and in ointment. **T. cam′phor,** compound of the two substances, used in pruritus and pediculosis; see *Thymol*. **T. cam′phor dii′odide,** iodothymol; used as an antiseptic instead of aristol. **T. car′bonate,** thymotal. **T. i′odide,** iodothymol. **T. sal′icylate,** salithymol.

**Thymopath′ia** or **Thymop′athy** (*thymos*, the mind, *pathos*, affection). Any disease of the mind. Also a disease of the thymus gland.

**Thy′motal.** Thymol carbonate. Recommended as preferable to thymol in the treatment of ankylostomiasis; dose, ℨss (2.0).

**Thy′mum.** Thymus.

**Thymus,** thi′mus (*thymos*). Throat sweetbread. An organ, concerned in hæmatosis, seated in the upper separation of the anterior mediastinum. It has the appearance of a glandular body; oblong, bilobate, soft, and very variable in size and color. In the fœtus it is very large, and contains in a central cavity—reservoir of the thymus—a milky fluid. It gradually disappears, and in old age is scarcely discernible. Its arteries, called thymic, are from the inferior thyroid, internal mammary, bronchial, and mediastinal; the veins have the same arrangement. It receives some nervous filaments from the pneumogastric nerves, the phrenic, and the inferior cervical ganglia. The following measurements have been made of this organ:

| | |
|---|---|
| Weight, 18.5 gm. (E. Bischoff). | Volume, 4–23 cm. |
| Length | 54–83 (Krause). |
| from birth to 9th month | 59.1 (Friedleben). |
| from 9th month to 2d year | 69.6 |
| from 3d to 14th year | 84.4 |
| Middle breadth | 27–41 |
| above and below | 7–9 |

In the 25th to 35th year, often earlier, the thymus usually disappears; exceptionally it remains until old age. **T. sicca′tus,** a preparation of the dried thymus of the calf, employed medicinally.

**Thymus,** ti′mus. A genus of plants of the order *Labiatæ*. Ordinary garden thyme, *T. vulgaris*, has an agreeable, aromatic smell, and a warm, pungent taste, and is reputed to be resolvent, emmenagogue, tonic, and stomachic. The properties of thyme are due to two hydrocarbons, thymene and cymene, associated with a stearoptene called thymol or oil of thyme, which is official. See *Thymol*. **T. calamin′thus,** Melissa calamintha. **T. capita′tus,** Satureia capitata. **T. cilia′tus,** T. mastichina. **T. citriodo′rus,** lemon thyme. **T. cret′icus,** Satureia capitata. **T. horten′sis,** thymus. **T. inclu′dens,** T. serpyllum. **T. mastichi′na,** low, shrubby, Spanish plant, used as an errhine. **T. multiflo′rus,** Melissa nepeta. **T. nepe′ta,** Melissa nepeta. **T. serpyl′lum,** mother of thyme, wild thyme; has the same properties as the garden thyme; lemon thyme, Serpyllum citratum, is a variety of it; it is very pungent, and has a particularly grateful odor, approaching that of lemons. **T. sylvat′icus,** Clinopodium vulgare. **T. sylves′tris,** Satureia capitata. **T. tenuifo′lius,** thymus. **T. vulga′ris,** garden thyme.

**Thy′myl ac′etate.** Acetyl thymol.

**Thy′raden.** Thyreoidin. Extract of the thyroid gland. Used internally or hypodermically in affections of that gland, in obesity, and skin diseases.

**Thyrein′.** Iodothyrin.

**Thyremphrax′is** (*emphraxis*, obstruction). Bronchocele.

**Thyreo-** (*thyreos*, a shield). In composition, the thyroid cartilage or gland; see *Thyro-*.

**Thy′reoadeni′tis.** Thyreoitis.

**Thy′reoid.** Thyroid.

**Thyreoidin′.** Iodothyrin.

**Thyreoï′tis.** Inflammation of the thyroid gland.

**Thyreolyt′ic.** Destructive to the thyroid gland.

**Thyreon′cus** (*onkos*, tumor). Bronchocele.

**Thyreotoxin′.** Thyrotoxin.

**Thyro-.** In composition, the thyroid cartilage or gland.

**Thyroantitoxin′.** $C_6H_{11}N_3O_5$. Active principle of thyroid extract, free from iodine. Also an antibody formed in the blood when repeated doses of thyroid extract are given.

**Thy′roaryepiglot′ticus.** United thyroepiglottic and arytenoepiglottic muscles.

**Thy′roarytenoepiglottide′us.** Thyroaryepiglotticus.

**Thyroaryt′enoid.** That which relates to the thyroid and arytenoid cartilages. **T. lig′aments,** inferior ligaments of the larynx; lips of the glottis; vocal cords or ligaments. Two ligaments, about two lines broad, formed of elastic and parallel fibres, which are contained in a duplicature of the mucous membrane of the larynx. They extend horizontally from the anterior projection at the base of each arytenoid cartilage to the middle of the angle of union of the thyroid cartilage. They are the essential organs of voice. See *Glottis*. **T. mus′cles** are thin muscles which arise from the middle and inferior part of the posterior surface of the thyroid cartilage, whence they proceed backward and outward, to be inserted into the outer part of the base of the arytenoid cartilage. They give the necessary tension to the ligaments of the glottis in the production of the voice. The name *thyroarytenoideus obliquus* is applied to a portion of the arytenoideus muscle.

**Thy′rocele** (*kele*, a tumor). Tumor of the thyroid gland. Bronchocele.

**Thyrocornicula′tus.** Upper portion of the inferior thyroarytenoid muscle, running from the upper anterior portion of the thyroid cartilage to the arytenoid cartilage.

**Thyrocricopharynge′us.** See *Cricopharyngeal*.

**Thyrocuneifor′mis.** Portion of the inferior thyroarytenoid cartilage inserted on the cuneiform cartilages.

**Thyroepiglot′tic.** Relating to the thyroid cartilage and epiglottis. **T. lig′ament,** band running from the anterior thyroid notch to the base of the epiglottis. **T. mus′cle,** portion of thyroarytenoid extending to the epiglottis.

**Thyroepiglot′ticus lon′gus.** Muscular slip at times passing from the lower horn of the thyroid cartilage to the epiglottis.

**Thyroepiglottide′us ma′jor.** Thyroepiglottic muscle. **T. mi′nor** or **supe′rior,** muscular fibres at times seen arising from the thyroid cartilage, running along the thyroepiglottic ligament, inserted into the epiglottis.

**Thyroglandin′.** A preparation of the thyroid gland, for medicinal use, which preserves the two active principles—iodoglobulin and thyroidin—in the proportion in which they exist in the gland.

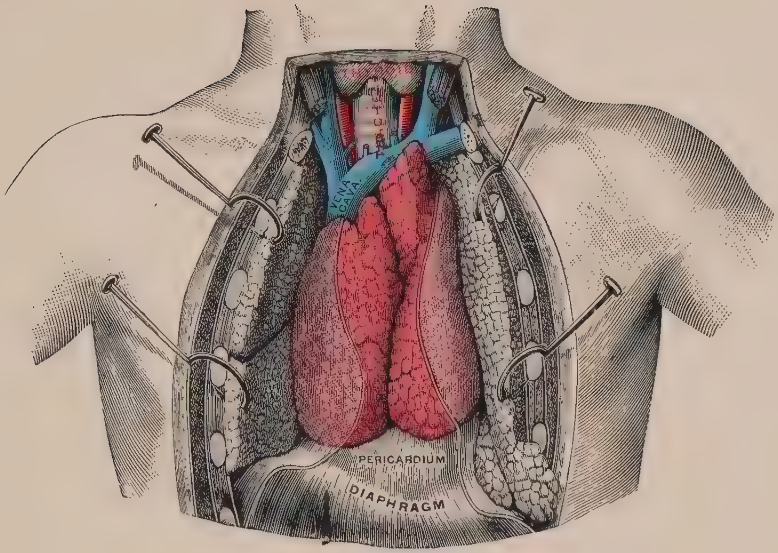
**Thyroglos′sal.** Relating to the thyroid gland and tongue, or connections of the two parts. **T. duct,** a canal in fetal life, which when it fails to close produces a congenital fistula in that location.

**Thyroglos′sus latera′lis.** Muscle arising at times from the junction of the thyrohyoid and hyoglossus.

**Thyrohy′al.** Epithet of the great cornu of the hyoid bone.

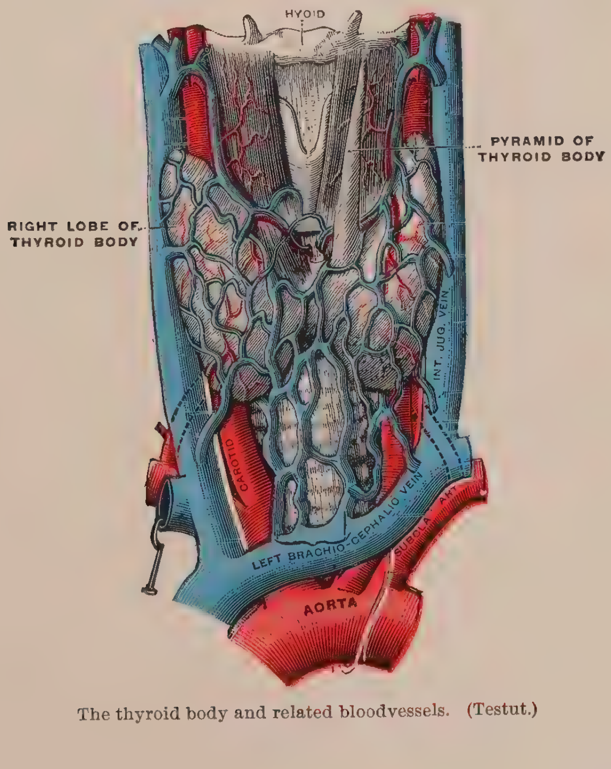
**Thyrohy′oid.** Belonging or relating to the thyroid cartilage and os hyoides. **T. mem′brane,** very broad, yellowish, fibrous membrane, thicker at the middle than at the extremities, attached above to the posterior surface of the body and great cornu of the os hyoides, and below to the whole superior edge of the thyroid cartilage. The lateral ligaments may be considered as the margins of the thyrohyoid membrane. They pass between the superior cornu of the thyroid cartilage to the extremities of the greater cornua of the os hyoides. A small, cartilaginous or bony nodule—*cartilago triticea, corpusculum triticeum*—is sometimes found in each. **T. mid′dle lig′aments,** thickened middle portion of t. membrane. **T. mus′cle** is situated at the anterior and superior part of the neck, attached to the oblique line on the anterior surface of the thyroid cartilage, to the inferior edge of the body of the os hyoides, and to the anterior portion of its great cornu. **T.**

## THYMUS



The thymus, the sternum and costal cartilages having been removed. (Testut.)

## THYROID



The thyroid body and related bloodvessels. (Testut.)

**nerve,** branch of the hypoglossal to the thyrohyoid muscle.

**Thyrohyoide′us.** Thyrohyoid muscle. **T. accesso′rius,** muscular slip sometimes found running from the superior cornu of the thyroid cartilage to the greater cornu of the hyoid bone. **T. az′ygos,** accessory muscle running from the greater cornu of the hyoid bone to the upper edge of the thyroid cartilage. **T. mi′nor,** t. azygos. **T. supe′rior,** t. azygos. **T. supe′rior mi′nor,** fasciculus of the thyrohyoid muscle, rarely seen to run from the upper edge of the thyroid cartilage to the posterior portion of the greater cornu of the hyoid bone. **T. supe′rior mi′nor az′ygos,** separate fasciculus of the thyrohyoideus. **T. supe′rior mi′nor latera′lis,** bundles of the thyrohyoideus running from the tip of the superior cornu of the thyroid cartilage to the end of the greater cornu of the hyoid bone.

**Thy′roid** (*thyreos*, a shield, *eidos*, form). Thyreoid. Shield-shaped. **Acces′sory t.,** see *T. gland.* **T. ar′teries,** these are two on each side: 1. The superior thyroid, superior laryngeal, superior guttural, arises from the anterior part of the external carotid and proceeds to the upper part of the thyroid gland, after having given off a laryngeal branch and a cricothyroid. 2. The inferior thyroid, inferior guttural, much larger than the last, arises from the upper part of the subclavian. It passes to the inferior part of the thyroid gland, to which it is distributed, after having given a number of branches to the neighboring parts, among which is the cervicalis ascendens. The inferior thyroid artery is occasionally replaced by the thyroid artery of Neubauer, which arises directly from the curvature of the aorta. **T. ar′tery of Neu′bauer,** see *Thyroid arteries.* **T. ax′is,** a short, thick trunk, arising from the first portion of the subclavian artery, dividing almost immediately into the inferior thyroid, suprascapular, and transversalis colli. **T. bod′y,** thyroid gland. **T. cachex′ia,** exophthalmic goitre. **T. car′tilage,** the largest of the cartilages of the larynx, at the anterior part of which it is situated. It is larger transversely than vertically, broader above than below, and seems formed by the junction of two quadrilateral plates, which produce by their union an angle that projects forward. Its two posterior margins terminate above and on each side by an ensiform prolongation called the greater cornu of the thyroid cartilage, *cornu superius* or *longum;* and below by a less prominent eminence, the lesser cornu, *cornu inferius* or *breve,* which is articulated with the cricoid. **T. disloca′tion,** dislocation of the femur into the thyroid foramen. **T. em′inence,** prominence produced by the thyroid in front of the neck. **T. ex′tract,** a preparation made from the thyroid gland of the sheep, employed in myxœdema, cretinism, and other affections. **T. fe′ver,** fever resulting from absorption of secretions of the thyroid gland during the operation of excision of that gland. **T. fora′men,** obturator foramen. **T. gan′glion,** middle cervical ganglion. **T. gland** or **bod′y** covers the anterior and inferior part of the larynx, as well as the first rings of the trachea, and is composed of two lobes, flattened from before to behind, which are united by a transverse prolongation of the same nature as themselves, called the isthmus. At times there arises from the upper border of the isthmus, or the lateral lobes in the neighborhood of the isthmus, a third or middle lobe—pyramus, processus pyramidalis, columna media, appendix glandulæ thyreoideæ. This lobe is sometimes independent, and forms a number of roundish or longish lobes, when it has been called glandula thyreoidea accessoria. The weight of the thyroid gland has been estimated at 30 grammes; volume, 25 to 30 cm.; the isthmus, 18 broad and high, 9 thick; lateral lobes 54–68 long; in the middle (breadth) 27–31, (thick) 14–18; the lobules, 0.5–1. **T. ther′apy,** use of extract of the thyroid gland in disease, as myxœdema, cretinism, skin diseases, etc. **T. treat′ment,** t. therapy. **T. veins,** these are: 1. A superior thyroid and several middle thyroid, which open into the internal jugular vein. 2. An inferior thyroid, much larger than the preceding, whose branches form, by anastomosing with those of the opposite side in front of the trachea, a very remarkable venous plexus, called the infrathyroideal plexus.

**Thyroid′eal.** That which concerns the thyroid gland or cartilage. **T. ar′teries,** thyroid arteries. **T. veins,** thyroid veins.

**Thyroidec′tomy.** Excision of the thyroid gland.

**Thyroide′i li′quor.** (Ph. Br.) A fluid obtained by macerating sheep's thyroid in 5 per cent. phenol solution; dose, ♏v–xv (0.32–1.0).

**Thyroide′um sic′cum.** (Ph. Br.) Minced, dried, and powdered sheep's thyroid; dose, gr. iij–x (0.2–0.65).

**Thyroide′us.** Thyroid. **T. pro′prius,** muscular bundle running from the superior to the inferior edge of the thyroid cartilage. **T. transver′sus,** variety of cricothyroid muscle running between the cricoid processes of the thyroid cartilages. **T. transver′sus im′par,** latter muscle found on the inside only.

**Thyroidin′.** Sterilized liquid extract of thyroid gland of sheep. See *Iodothyrin.*

**Thy′roidism.** General effects of overdoses of thyroid gland, when used as a therapeutic agent, consisting of tachycardia, insomnia, polyuria, partial paralysis, etc.

**Thyroidi′tis.** Inflammation of the thyroid gland.

**Thyroidiza′tion.** Treatment by the use of thyroid extract.

**Thyroidot′omy.** Incision of the thyroid gland.

**Thyro-i′odine.** The most important constituent of the thyroid gland, containing iodine and phosphorus, used as a stimulant of the nervous system and of the circulation in myxœdema, goitre, cretinism, some forms of skin disease, etc.; dose, gr. v–x (0.32–0.65).

**Thyrolaryn′geal.** Relating to the thyroid gland and larynx. **T. ar′tery,** a branch of the superior thyroid artery. **T. fas′cia,** fascia attached to the cricoid cartilage and enclosing the thyroid gland.

**Thyrolin′gual.** Thyroglossal.

**Thyrolit′ic.** Destructive to the thyroid gland.

**Thyromediastina′lis.** Muscular bundle running from the external surface of the pericardium to the thyroid gland.

**Thyromembrano′sus.** Portion of the thyroarytenoideus inserted within the plica thyroarytenoidea inferior.

**Thyron′cus** (*onkos*, swelling). Bronchocele.

**Thy′ro-œsophage′us.** Muscular bundles running from the œsophagus to the thyroid cartilage.

**Thyropalati′nus.** Portion of the palatopharyngeus inserted into the thyroid gland.

**Thyropharynge′us.** Portion of the constrictor pharyngis inferior attached to the thyroid cartilage. See *Cricopharyngeal.*

**Thyropharyngopalati′nus** or **Thyropharyngostaphyli′nus.** Palatopharyngeus.

**Thyrophrax′ia** (*phrasso*, to obstruct). Bronchocele.

**Thyrophy′ma** (*phyma*, growth). Hypertrophy of the thyroid gland.

**Thyropri′val.** Relating to or caused by deprivation of the functions of the thyroid gland, as by lesion or removal.

**Thyropro′teid.** Albuminous substance in thyroid gland. When in excess, and especially if the natural secretion of the thyroid is deficient, myxœdema may result; or if the condition is reversed, Graves's disease.

**Thyropro′tein.** Proteinaceous substance from the thyroid gland.

**Thyrosyndes′micus.** Bundles of the thyrohyoid muscle inserted on the lateral thyrohyoid ligament.

**Thyrot′omy** (*tome*, section). Division of the thyroid cartilage, as for the removal of foreign bodies in the larynx, etc.

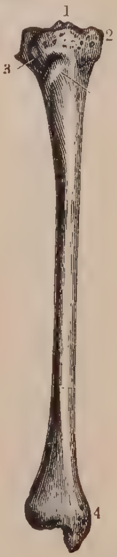
**Thyrotoxin′.** A cytotoxin acting specifically on the cells of the thyroid gland. Thyroantitoxin.

**Thyrotrachea′lis profun′dus.** Abnormal insertion of a portion of the cricothyroid muscle on the trachea. **T. superficia′lis,** abnormal insertion of the sternothyroid muscle on the trachea.

**Thyrotritice′us.** Abnormally inserted bundles of fibres of the thyrohyoid on the lesser cornu of the hyoid bone.

**Thysseli′num.** Peucedanum palustre. **T. palus′tre,** Peucedanum palustre.

**Tiarel′la cordifo′lia.** Coolwort; tonic and diuretic.



Anterior view of tibia of right side: 1, spinous process, and pits for attachment of crucial ligaments; 2, head; 3, articular face for head of fibula; 4, internal malleolus.

**Tib′ia** (a flute or pipe). The largest bone of the leg, a long, irregular, and triangular bone situated on the inner side of the fibula. It has a superior or femoral extremity, large, rounded, and with two eminences at the sides called tuberosities of the tibia. The outermost is articulated with the fibula. On its head are two articular, oval, concave surfaces articulated with the condyles of the femur. The inferior or tarsal extremity has an articular surface beneath, which joins the astragalus; within, a triangular eminence which forms the malleolus internus, and on the outside a triangular surface which articulates with the fibula. The body or shaft of the tibia has three faces, separated by three angles, the anterior of which is the most prominent, and is called the spine or crista of the tibia—the shin. The tibia is articulated with the femur, fibula, and astragalus. **T. min′ima,** fibula.

**Tib′iad.** Toward the tibia.

**Tibiæ′us.** Tibial artery. **T. anti′cus,** tibialis anticus. **T. posti′cus,** tibialis posticus.

**Tib′ial.** That which relates to the tibia or to the leg. **T. aponeuro′sis,** this surrounds the muscles of the leg, continuous above with the femoral aponeurosis, and arises from the head of the fibula and from several fibrous expansions which detach themselves from the tendons of the triceps, sartorius, gracilis, and semitendinosus. It descends around the leg, attaching itself to the whole extent of the anterior and inner edges of the tibia. It sends below an expansion, which passes before the tendo Achillis, and is continuous with the anterior annular ligament of the tarsus. It is attached, also, to the sheath of the peroneal muscles. **T. ar′teries** are two in number: 1. *Anterior tibial artery,* which arises from the popliteal, before its bifurcation, passes immediately through the opening in the upper part of the interosseous ligament, and reaches the anterior part of the leg, when it turns downward and descends obliquely between the extensor communis digitorum pedis and the tibialis anticus, anterior to the interosseous ligament, glides under the anterior annular ligament of the tarsus, and takes the name *dorsalis tarsi.* Among the numerous branches given off by the anterior tibial may be distinguished the recurrent tibial artery, internal and external malleolar artery. 2. *Posterior tibial artery,* which arises from the bifurcation of the popliteal artery, and descends between the two planes of the posterior muscles of the leg until it arrives under the arch of the calcaneum, where it divides into two branches—the plantar arteries. **T. as′pect,** an aspect toward the side on which the tibia is situated. **T. commu′nicating nerve,** external saphenous nerve. **T. nerves** are two in number: 1. The anterior tibial nerve; one of the two branches in which the external popliteal terminates; it accompanies the anterior tibial artery. 2. The posterior tibial nerve, which is also called the internal popliteal. **T. veins,** these are anterior and posterior, and have the same arrangement as the arteries which they accompany.

**Tibia′le.** Bone in the embryo and certain animals having its analogue in a portion of the astragalus.

**Tibia′lis anti′cus.** A muscle situated at the anterior part of the leg. Above, it has the shape of a triangular prism; below, is slender and tendinous. It is attached above to the anterior part of the external tuberosity of the tibia, to the superior half of the outer surface of that bone, and to the anterior surface of the interosseous ligament. Below, its tendon terminates at the base of the first cuneiform bone and at the posterior extremity of the first metatarsal bone. It bends the foot on the leg and directs its point inward at the same time that it raises its inner edge. It can also bend the leg on the foot and assist in preserving the upright position. **T. anti′cus accesso′rius,** tibiofascialis. **T. grac′ilis,** plantar muscle. **T. posti′cus,** situated at the posterior and deep part of the leg, thicker above than below, and attached above to the posterior surface of the fibula, to the posterior surface of the tibia, and to the interosseous ligament. It terminates below at the tuberosity on the inferior extremity of the os scaphoides. This muscle extends the foot on the leg, at the same time raising its inner edge. It likewise extends the leg on the foot. It was called *nauticus* by Spigelius, because sailors bring it chiefly into action in climbing the mast. **T. profun′dus,** tibiofascialis. **T. secun′dus,** tensor of capsule of the ankle.

**Tibiofascia′lis.** Small muscle arising at times from the lower third of the anterior edge of the tibia over the tibialis anticus, inserted into the annular ligament and deep fascia. Also called *tibiofascialis anticus.*

**Tibiofem′oral.** Relating to the tibia and femur. **T. in′dex,** ratio between the length of the tibia and that of the femur.

**Tibiofib′ular.** Relating to the tibia and fibula. **T. articula′tions,** those between the tibia and fibula. **T. lig′aments,** those assisting in the formation of the tibiofibular articulations.

**Tibionavic′ular.** Relating to the tibia and the scaphoid or navicular bone. **T. lig′ament,** portion of the deltoid ligament of the ankle.

**Tibioplanta′ris.** Accessory slip of the tibialis anticus, running from the latter muscle to the plantar fascia, and through the latter acting upon the great toe.

**Tibiotar′sal.** Relating to the tibia and tarsus. **T. articula′tion,** articulation of the foot with the leg; formed by the tibia and the astragalus, and strengthened by the lateral, anterior, and posterior ligaments.

**Tic.** Twitching, vellication. A local and habitual convulsive motion of certain muscles, and especially of some of those of the face. It is sometimes called spasmodic or convulsive tic, tic non-douloureux, hyperkinesia of the facial nerve, histrionic or mimic spasm of the face, to distinguish it from *tic douloureux,* which has also been called epileptiform neuralgia and neuralgic chorea, and has been termed a partial chorea or form of chronic chorea. **Bow′ing t.,** t. characterized by violent movements of the body and the head; sometimes called tic de salaam, or salaam convulsions. **Chore′al t.,** general t. **Convul′sive t.,** a psychosis allied to hysteria, almost like a monomania, attended with involuntary muscular movements, explosive utterances, and curious mental disturbances. **Diaphragmat′ic t.,** t. with painful spasmodic twitching of the diaphragm. **T. doulou-reux′,** painful tic; facial neuralgia. **Gen′eral t.,** t. accompanied with choreiform movements of the whole body. **Gestic′ulatory t.,** t. accompanied with gesticulations. **Laryn′geal t.,** t. accompanied with noisy or explosive passage of air through the larynx. **Lo′calized t.,** t. confined to a small portion of the body. **Mo′tor t.,** t. characterized by a series of regular movements. **Nod′ding t.,** bowing t. **T. non-douloureux′,** see the prime. **Progres′sive chore′ic t.,** chronic condition of childhood, frequently fatal, beginning in the cervical muscles with clonic spasms, and afterward with tonic spasms, becoming general. **Psychomo'tor t.**, a motor form of tic, attended with mental disturbance. **Respi'ratory t.**, diaphragmatic t. **Ro'tatory t.**, a hyperkinesis of the muscles supplied with nervous distribution from the external branch of the spinal nerve; the term *spasmodic torticollis* has been applied to one variety of it. **Salaam' t.**, bowing t. **Spasmod'ic t.**, convulsive t.

**Tick.** Ixodes ricinus. **T. fe'ver**, Texas cattle fever. **T. wood**, Ixodes ricinus.

**Tick'le.** To titillate; to cause the sensation of tickling. **T. weed**, Veratrum viride.

**Tick'ling** (*titillo*, to tickle). It sometimes means the action of tickling (titillation), at others the sensation produced by this action. A sensation which commonly causes laughter and a state of general spasm that may be dangerous if too long protracted.

**Tick'seed sun'flower.** Coreopsis trichosperma.

**Tick'weed.** Hedeoma. **T. sun'flower**, Coreopsis trichosperma.

**Tico'rea febrif'uga.** A Brazilian plant, ord. *Rutaceæ*, the bark of which is intensely bitter, astringent, and antiperiodic. **T. jasminiflo'ra**, a decoction of the leaves is said to be drunk by the Brazilians as a cure for frambœsia.

**Tictolo'gia** or **Tictol'ogy** (*tikto*, to bring forth, *logos*, doctrine). Obstetrical science.

**Ticu'nus.** Curare.

**Ti'dal air.** The air that passes in and out during each ordinary respiration; see *Respiration*. **T. breath'ing** or **respira'tion**, see *Cheyne-Stokes*. **T. wave**, slight elevation in the sphygmographic tracing synchronous with the percussion wave.

**Tide.** A periodical rise and fall; ebb and flow. **Acid t.**, a temporary increase in the acidity of the urine occurring during sleep or fasting. **Al'kaline t.**, diminution of the amount of acid in the urine during digestion.

**Tie'demann's glands.** Bartholin's glands. **T.'s nerve**, nervous plexus from the ciliary nerves around the central artery of the retina.

**Tiglin'ic acid.** Acid from oleum tiglii or croton oil.

**Tig'lium.** Croton tiglium.

**Tigretier**, tig-ret-e-a'. Endemic dancing mania of Abyssinia.

**Ti'groid mass'es.** Nissl bodies. Masses of small, chromophilous granules in the protoplasm of nerve-cells.

**Tikim'ma.** Cacoucia coccinea.

**Til'ia.** The lime, lind, or linden tree, ord. *Tiliaceæ;* the flowers have been considered anodyne and antispasmodic. **T. america'na**, linden, linn, basswood, whitewood, spoonwood. **T. canaden'sis**, T. americana. **T. gla'bra**, T. americana.

**Tillacher'ry cor'tex.** Nerium antidysentericum.

**Tilland'sia usneoi'des.** Spanish moss of Southern United States. Used as an astringent.

**Tillaux'-Phocas' disease'.** Chronic fibrous nodular inflammation of the breasts.

**Til'mus** (*tilmos*, pulling). Carphologia. Evulsion.

**Ti'ly of the In'dians.** Viburnum dentatum.

**Ti'mac.** East India root; said to possess diuretic properties.

**Timbre**, tambr (Fr.). The quality of sound by which one voice or one instrument can be distinguished from another when producing the same note.

**Tim'idus.** Rectus inferior oculi muscle.

**Tin.** A solid whitish metal, symbol Sn, of a characteristic odor when rubbed; sp. gr. 7.291, giving a peculiar tinkling sound when struck. It has been used in medicine as a mechanical anthelmintic in the form of pulvis stanni or granular tin. **But'ter of t.**, muriate of tin. **Chlo'ride** or **Chlo'ruret of t.**, muriate of tin. **Deutohydrochlo'rate of t.**, muriate of tin. **T. foil** is used for plugging carious teeth, etc. **T. glass**, bismuth. **Gran'ular t.**, see *Tin*. **Mu'riate of t.**, fuming liquor of Libavius, salt of tin, butter, deutohydrochlorate, or superoxygenated muriate of tin, formed by the action of muriatic acid on tin; violent cathartic, in dose of gr. ij–iij (0.13–0.2), also used for injection in gonorrhœal and purulent discharges from the vagina. **T. o'leate**, see *Oleate*. **Salt of t.**, muriate of t. **Sul'phuret of t.**, see *Aurum musivum*.

**Tinag'mus** (*tinagmos*, a shaking). Concussion.

**Tin'cal.** Crude borax.

**Tinctu'ra** (*tingo*, to dye). Tincture. Preparations made by the extraction of various principles or the solution of different medicinal substances by means of alcohol, ether, or spirit of ammonia, the process employed being that of maceration, digestion, or percolation. The word is now applied only to solutions in alcohol, unless it is distinctly stated that ammonia or ether is employed, when the solution is called an ammoniated tincture or ethereal tincture. Seventy-two tinctures are official in the Ph. U. S. and eighty-six in the Ph. Br. and the Colonial and Indian addenda. A tincture is an alcoholic solution of a non-volatile substance, except the tincture of iodine, while a spirit is an alcoholic solution of a volatile substance. The following are the official (Ph. U. S. and Br.) tincturæ. The figures denote the amount in grammes of the substance used in making 100 c.c. of tincture: **T. aconi'ti** (U. S. and Br.), aconite root 35; dose, ♏j–v (0.065–0.32); the Br. tincture is weaker than the U. S. **T. actæ'æ**, t. cimicifugæ. **T. adhato'dæ** (Br.), Adhatoda vasica, expectorant and antispasmodic; dose, ʒss–j (2.0–4.0). **T. al'oës** (U. S. and Br.), purified aloes 10, licorice 20; dose, ʒss–ij (2.0–8.0). **T. a. et myr'rhæ** (U. S.), aloes, myrrh, and licorice, of each 10; dose, ʒss–ij (2.0–8.0). **T. alsto'niæ constric'tæ** (Br.), used in Australia as a febrifuge and in influenza; dose, ♏v–xx (0.32–1.3). **T. a. scholar'is** (Br.), dita bark of India and the Philippines, used in dysentery; dose, ʒss–j (2.0–4.0). **T. andrograph'idis** (Br.), creyat or kariyat, tonic resembling chiretta; dose, ʒss–j (2.0–4.0). **T. aristolo'chiæ** (Br.), tonic and stimulant, used for snake-bites; dose, ʒss–j (2.0–4.0). **T. ar'nicæ flo'rum** (U. S. and Br.), arnica flowers 20; dose, ♏x–xxx (0.65–2.0). **T. ar'nicæ rad'icis** (U. S.), arnica root 10; dose, ♏x–xxx (0.65–2.0). **T. asafœt'idæ** (U. S. and Br.), asafœtida 20; dose, ʒss–j (2.0–4.0). **T. auran'tii** (Br.), **T. a. ama'ri** (U. S.), bitter orange-peel 20; dose, ʒj–ij (4.0–8.0). **T. a. dul'cis** (U. S.), sweet orange-peel 20; dose, ʒj–ij (4.0–8.0). **T. azadirach'tæ in'dicæ** (Br.), bark of stem of Melia azadirachta, nrem or margosa bark; tonic and antiperiodic; dose, ʒss–j (2.0–4.0). **T. belladon'næ** (Br.), made by adding liquid extract of the root to alcohol; dose, ♏v–xv (0.32–1.0). **T. b. folio'rum** (U. S.), belladonna leaves 15; dose, ♏v–xv (0.32–1.0). **T. benzoi'ni** (U. S.), benzoin 20; dose, ♏x–xxx (0.65–2.0). **T. b. compos'ita** (U. S. and Br.), friars' balsam, Jesuits' drops, Wade's drops, Vervain's balsam, Commander's balsam, wound balsam; contains benzoin 12, aloes 2, storax 8, balsam of tolu 4; dose, ʒss–j (2.0–4.0). **T. berber'idis** (Br.), from the stems of B. aristata; tonic in doses of ʒss–j (2.0–4.0). **T. bryo'niæ** (U. S.), bryonia 10; dose, ♏x–ʒj (0.65–4.0). **T. bu'chu** (Br.), buchu 8; dose, ʒss–j (2.0–4.0). **T. calen'dulæ** (U. S.), calendula florets (marigold) 20; used externally. **T. calot'ropis** (Br.), root bark of Calotropis procera and gigantea; tonic and emetic; dose, ʒss–j (2.0–4.0). **T. calum'bæ** (U. S. and Br.), calumba 10; dose, ʒss–ij (2.0–8.0). **T. cam'phoræ compos'ita** (Br.), t. opii composita, paregoric; dose, ʒss–j (2.0–4.0). **T. can'nabis in'dicæ** (U. S. and Br.), cannabis indica 15; dose, ♏xv–ʒj (1.0–4.0). **T. canthar'idis** (U. S. and Br.), cantharides 5; dose, ♏j–x (0.065–0.65). **T. cap'sici** (U. S. and Br.), capsicum 5; dose, ♏x–xxx (0.65–2.0). **T. cardamo'mi** (U. S.), cardamom 10; dose, ʒj–ij (4.0–8.0). **T. c. compos'ita** (U. S. and Br.), cardamom and cinnamon, of each 2, caraway 1, cochineal 0.5; dose, ʒj–ij (4.0–8.0). **T. cascaril'læ** (Br.), cascarilla bark 8; dose, ʒss–j (2.0–4.0). **T. cat'echu** (Br.), **T. c. compos'ita** (U. S.), catechu 10, cinnamon 5; dose, ʒss–j (2.0–4.0). **T. chira'tæ** (U. S. and Br.), chiretta 10; dose, ʒss–ij (2.0–8.0). **T. chlorofor'mi et morphi'næ compos'ita** (Br.), intended as a substitute for chlorodyne; contains chloroform, morphine hydrochloride, diluted hydrocyanic acid, tincture of capsicum, tincture of Indian hemp, oil of peppermint, glycerin, and alcohol; dose, ♏v–xv (0.32–1.0). **T. cimicif'ugæ** (U. S. and Br.), cimicifuga 20; dose, ʒj–ij (4.0–8.0). **T. cincho'næ** (U. S. and Br.), cinchona 20; dose, ʒj–ij (4.0–8.0). **T. c. compos'itæ** (U. S. and Br.), Huxham's tincture; red cinchona 10, bitter-orange peel 8, serpentaria 2; dose, ʒj–ij (4.0–8.0). **T. cinnamo'mi** (U. S. and Br.), Ceylon cinnamon 10; dose, ʒss–j (2.0–4.0). **T. coc'ci** (Br.), cochineal 8; used chiefly as a coloring agent, but has been prescribed in nervous affections in doses of ♏xv–ʒj (1.0–4.0). **T. col'chici sem'inis** (U. S.), **T. c. sem'inum** (Br.), colchicum seed 15; dose, ♏xv–xxx (1.0–2.0). **T. coni'i** (Br.), hemlock seeds or fruit 8; dose, ʒss–j (2.0–4.0). **T. coscin'ii** (Br.), stems of Coscinium fenestratum 10; tonic, resembling calumba; dose, ʒss–j (2.0–4.0). **T. cro'ci** (U. S. and Br.), saffron 10; used chiefly as a coloring-matter, but is also esteemed slightly stomachic; dose, ʒj–ij (4.0–8.0). **T. cubeb'æ** (U. S. and Br.), cubebs 20; dose, ʒss–ij (2.0–8.0). **T. digita'lis** (U. S. and Br.), digitalis 15; dose, v–xv (0.32–1.0). **T. er'gotæ ammonia'ta** (Br.), ergot 25, ammonia solution 2; dose, ʒss–j (2.0–4.0). **T. fer'ri chlor'idi** (U. S.), **T. f. perchlor'idi** (Br.), solution of ferric chloride 25; dose, ♏x–xxx (0.65–2.0). **T. gal'læ** (U. S. and Br.), nutgall 20; dose, ʒj–ij (4.0–8.0). **T. gelsem'ii** (U. S. and Br.), gelsemium 15; dose, ♏v–xx (0.32–1.3); a much stronger unofficial tincture is employed occasionally. **T. gentia'næ compos'ita** (U. S. and Br.), gentian 10, bitter-orange peel 4, cardamom 1; dose, ʒss–j (2.0–4.0). **T. guai'aci** (U. S.), guaiac 20; dose, ʒss–j (2.0–4.0). **T. g. ammonia'ta** (U. S. and Br.), guaiac 20, in aromatic spirit of ammonia; dose, ʒss–j (2.0–4.0). **T. hamamel'idis** (Br.), witch-hazel bark 10; dose, ʒss–j (2.0–4.0). **T. herba'rum recen'tium** (U. S.), a tincture directed to be made from 50 gm. of any fresh herb to 100 c.c. of tincture; the dose varies with the drug employed. **T. hu'muli** (U. S.), hops 20; dose, ℥ss–j (16.0–32.0). **T. hydras'tis** (U. S. and Br.), hydrastis 20; dose, ʒss–j (2.0–4.0). **T. hyoscy'ami** (U. S. and Br.), hyoscyamus (henbane) 15; dose, ʒss–j (2.0–4.0). **T. i'odi** (U. S.), iodine 7; dose, ♏iij–v (0.2–0.32). **T. i'odi** (Br.), iodine and iodide of potassium, of each 2.5; dose, ♏ij–v (0.13–0.32). **T. ipecacuan'hæ et o'pii** (U. S.), liquid Dover's powder, each 10 minims, is the equivalent of 1 grain each of opium and ipecac; dose, ♏v–xv (0.32–1.0). **T. jaboran'di** (Br.), jaborandi 20; dose, ʒss–j (2.0–4.0). **T. jala'pæ** (Br.), jalap 20; dose, ʒss–j (2.0–4.0). **T. j. compos'ita** (Br.), jalap 8, scammony 2, turpeth root 1; dose, ʒss–j (2.0–4.0). **T. kalada'næ** (Br.), Ipomœa hederacea (pharbitis nil) 20; anthelmintic and purgative; dose, ʒss–j (2.0–4.0). **T. ki'no** (U. S. and Br.), kino 10; dose, ʒj–ij (4.0–8.0). **T. krame'riæ** (U. S. and Br.), rhatany 20; dose, ʒj–ij (4.0–8.0). **T. lactuca'rii** (U. S.), lactucarium 50; dose, ʒss–j (2.0–4.0). **T. lavan'dulæ compos'ita** (U. S. and Br.), cinnamon 2, cloves 0.5, nutmeg and red saunders, of each 1, oil of rosemary 0.2, oil of lavender flowers 0.8; dose, ʒss-j (2.0–4.0). **T. limo'nis** (Br.), lemon-peel 7; dose, ʒss–j (2.0–4.0). **T. lobe'liæ** (U. S.), lobelia 20; dose, ♏x–xxx (0.65–2.0) as an expectorant, ʒj–ij (4.0–8.0) as an emetic. **T. l. æthe'rea** (Br.), lobelia 7 in spirit of ether; dose, ♏v–xv (0.32–1.0). **T. lu'puli** (Br.), t. humuli; hops 12; dose, ʒss–j (2.0–4.0). **T. mati'co** (U. S.), matico 10; dose, ʒj–ij (4.0–8.0). **T. mos'chi** (U. S.), musk 5; dose, ʒj–ij (4.0–8.0). **T. myr'rhæ** (U. S. and Br.), myrrh 20; dose, ♏v–xv (0.32–1.0). **T. nu'cis vom'icæ** (U. S. and Br.), nux vomica extract 2; dose, ♏v–xx (0.32–1.3). **T. oli'veri cor'ticis** (Br.), cinnamomum oliveri, or black sassafras bark 10; dose, ʒss–j (2.0–4.0). **T. o'pii** (U. S. and Br.), laudanum; opium 10; dose, ♏v–xv (0.32–1.0). **T. o. ammonia'ta** (Br.), Scotch paregoric, made with benzoic acid, oil of anise, tincture of opium, water of ammonia, and alcohol; dose, ʒss–j (2.0–4.0). **T. o. camphora'ta** (U. S.), paregoric, t. camphoræ composita (Br.); opium, benzoic acid, camphor, and oil of anise, of each 0.4, glycerin 4; dose, ʒss–ij (2.0–8.0). **T. o. deodora'ti** (U. S.), formerly called t. o. deodorata; opium 10 in ether and alcohol; dose, ♏v–xv (0.32–1.0). **T. physostig'matis** (U. S.), Calabar bean 15; dose, ♏v–xv (0.32–1.0). **T. picrorrhi'zæ** (Br.), from the dried rhizome of P. kurroa; tonic, aperient, and antiperiodic; dose, ʒss–j (2.0–4.0). **T. podophyl'li** (Br.), resin of podophyllum 3; dose, ♏v–xv (0.32–1.0). **T. p. in'dici** (Br.), from rhizome of P. emodi or Indian podophyllum; similar action to preceding; dose, ♏v–xv (0.32–1.0). **T. pru'ni virginia'næ** (Br.), wild cherry bark 20; dose, ʒss–j (2.0–4.0). **T. pyre'thri** (U. S. and Br.), pyrethrum 20; used externally. **T. quas'siæ** (U. S. and Br.), quassia 10; dose, ʒss–j (2.0–4.0). **T. quilla'iæ** (Br.), **T. quilla'jæ** (U. S.), soap-bark 20; used chiefly externally, but has been employed internally as an expectorant; dose, ʒss–j (2.0–4.0). **T. quini'næ** (Br.), quinine hydrochloride, 2, in tincture of fresh orange; dose, ʒss–j (2.0–4.0). **T. q. ammonia'ta** (Br.), quinine sulphate 2, solution of ammonia 10; dose, ʒss–j (2.0–4.0). **T. rhe'i** (U. S.), rhubarb 10, cardamom 2; dose, ʒj–ij (4.0–8.0). **T. r. aromat'ica** (U. S.), rhubarb 20, cinnamon and clove, of each 4, nutmeg 2; dose, ʒss–j (2.0–4.0). **T. r. compos'ita** (Br.), rhubarb 7, licorice, ginger, and crocus; dose, ʒij–iv (8.0–16.0). **T. r. dul'cis** (U. S.), rhubarb 10, licorice and anise, of each 4, cardamom 1; dose, ʒj–ij (4.0–8.0). **T. sanguina'riæ** (U. S.), sanguinaria 15, acetic acid 2; dose, ♏v–xxx (0.32–2.0). **T. scil'læ** (U. S. and Br.), squill 15; dose, ♏v–xv (0.32–1.0). **T. sen'egæ** (Br.), senega 8; dose, ʒss–j (2.0–4.0). **T. sen'næ** (Br.), senna 8, coriander and caraway seed, of each 1.5; dose, ʒij–iv (8.0–16.0). **T. serpenta'riæ** (U. S. and Br.), snakeroot 10; dose, ʒss–j (2.0–4.0). **T. stramo'nii** (Br.), made with stramonium leaves; dose, ♏v–xv (0.32–1.0). **T. s. sem'inis** (U. S.), stramonium seed 15; dose, ♏v–xv (0.32–1.0). **T. strophan'thi** (U. S.), strophanthus 5; dose, ♏iij–viij (0.2–0.5). **T. s.** (Br.) is one-half this strength; dose, ♏v–xv (0.32–1.0). **T. sum'bul** (U. S. and Br.), sumbul 10; dose, ʒss–j (2.0–4.0). **T. tinos'poræ** (Br.), from the stems of Tinospora cordifolia (gulancha); tonic; dose, ʒss–j (2.0–4.0). **T. toluta'ni** (U. S.), **T. toluta'na** (Br.), balsam of tolu 10; dose, ʒss–ij (2.0–8.0). **T. urgin'eæ** (Br.), from Urginea indica or Scilla indica (Indian squill); dose, ♏v–xv (0.32–1.0). **T. valeria'næ** (U. S.), valerian 20; dose, ʒj–ij (4.0–8.0). **T. v. ammonia'ta** (U. S. and Br.), of the same strength as the preceding, the menstruum being aromatic spirit of ammonia; dose, ʒss–j (2.0–4.0). **T. vanil'læ** (U. S.), vanilla 10; dose, ♏x–xxx (0.65–2.0). **T. vera'tri vir'idis** (U. S.), veratrum viride 40; dose, ♏j–viij (0.065–0.5). **T. zingib'eris** (U. S. and Br.), ginger 20; dose, ♏xx–ʒj (1.3–4.0). **T. z. for'tior,** essence of ginger, formerly in the Ph. Br., is of double the strength of the official tincture.

**Tinc'ture.** Tinctura. **T. of bark,** tinctura cinchonæ. **Bes'tucheff's t.,** an ethereal t. of ferric chloride. **Flem'ing's t.,** a tincture of aconite about twelve times the strength of the official tincture. **Gol'den t.,** Bestucheff's t. **Hux'ham's t.,** tinctura cinchonæ composita. **Klap'roth's t.,** Bestucheff's t. **T. of lit'mus,** see *Lichen roccella.* **Lud'wig's t.,** a solution of tartrate of iron and potassium. **Moth'er t.,** a tincture of definite strength from which the homœopathic dilutions are prepared. **Ner'vous t.,** Bestucheff's t. **Ry'mer's t.,** a t. of rhubarb and aloes with various aromatics. **T. of steel,** tinctura ferri chloridi. **Stom'ach t.,** tinctura cardamomi composita. **Tooth'ache t.,** contains tannin and mastich in ether, applied locally. **Turn'bull's t.,** a t. of aconite about twelve times the strength of the official t. **War′burg's t.**, see *Warburg*. **Whytt's t.**, see *Whytt*.

**Tin′der.** Boletus igniarius.

**Tin′ea** (worm). Porrigo. Ringworm. **T. amianta′cea** or **asbesti′na**, seborrhœa. **T. bar′bæ**, barber's itch, sycosis parasitica; inflammatory condition of the hair follicles of the face and neck, due to trichophyton tonsurans. **T. cap′itis**, porrigo. **T. cilia′ris**, see *Ophthalmia tarsi*. **T. circina′ta**, a form of t. trichophytina affecting the trunk of the body. **T. c. trop′ica**, Burmese, Chinese, Indian, or oriental ringworm; severe variety of t. circinata. **T. decal′vans**, porrigo decalvans; alopecia areata. **T. of the eye′lids**, see *Ophthalmia tarsi*. **T. facie′i**, porrigo larvalis. **T. favo′sa**, porrigo favosa; favus. **T. fico′sa**, porrigo scutulata. **T. furfura′cea**, porrigo furfurans; pityriasis; seborrhœa. **T. gal′li**, white comb; morbid condition affecting cock's combs, traceable to a fungus like that of favus. **T. granula′ta**, porrigo scutulata; porrigo lupinosa. **T. imbrica′ta**, contagious disease, occurring chiefly in the tropics, characterized by the formation of concentric and scaling annular patches, produced by a vegetable parasite. **T. ker′ion**, disorder of the skin due to inflammation in a portion of the scalp affected with ringworm. **T. lac′tea**, porrigo larvalis. **T. lupino′sa** or **malig′na**, favus. **T. muco′sa**, porrigo lupinosa. **T. nodo′sa**, disease affecting the hairs of the beard or moustache with nodular concretions made up of fungus spores a little smaller than those of tinea trichophytina. **T. porrigino′sa**, porrigo furfurans. **T. tar′si**, see *Ophthalmia tarsi* and *Blepharitis*. **T. ton′dens**, porrigo decalvans. **T. tonsu′rans**, porrigo decalvans. **T. trichophyti′na**, ringworm; contagious eruption, of circular form, parasitic, being due to a fungus called the trichophyton; known under its forms as t. barbæ, t. circinatus, t. tonsurans, etc. **T. syco′sis**, sycosis parasitica. **T. trichophyti′na cor′poris**, t. circinata. **T. trichophyti′na cru′ris**, form of t. on the inside of the thigh or perineum. **T. trichophyti′na un′guium**, form of t. attacking the nails, which become opaque and easily broken. **T. un′guis**, a condition of the nail in which it appears to be eroded. **T. ve′ra**, favus. **T. versic′olor**, brown eruption on the skin, chiefly of the trunk, variously called pityriasis versicolor, chloasma, etc.; due to a fungus.

**Tin′eæ** (pl. of tinea). Worms.

**Tin′gible.** Readily stained.

**Ting′ling.** A sharp, purring, or thrilling sensation, not always painful.

**Tink′er's weed.** Triosteum.

**Tink′le** or **Tink′ling.** Sound heard in cases of pneumothorax when communication with a large air-tube exists; resembles the striking of a distant small bell; called also metallic t. **Bouillaud's′ t.**, see *Bouillaud*.

**Tin′na.** See *Chloasma*.

**Tinnimen′tum metal′licum.** Metallic tinkling.

**Tinni′tus au′rium** (*tinnio*, to tinkle). Ringing of the ears; a subjective sound, like the ringing of a bell, the noise of wind, buzzing, etc. **Tel′ephone t.**, see *Telephone*.

**Tinos′pora cordifo′lia.** Climbing shrub of India; tonic, antiperiodic, and diuretic.

**Tintom′eter.** Apparatus for determining the exact color of a fluid by comparison with a chart of standard colors.

**Tip.** Apex, extremity. **Wool′ner's t.**, see *Woolner*.

**Tip′foot.** Clubfoot; talipes equinus.

**Tipsa′ria.** Decoctum hordei.

**Tiquer**, tick′er or te-kay′. One affected with tic, in some form or other.

**Tire.** Fatigue. Exhaustion.

**Tirebal′** (Fr.). A corkscrew-like instrument used for extracting bullets.

**Tirefond′** (Fr.). A surgical instrument formerly used to elevate the piece of bone sawed off by the trephine or to extract foreign bodies.

**Tires.** Milk-sickness.

**Tisane′** (Fr.). Ptisan. An aqueous medicine, containing but little if any medicinal agent; particularly the decoction of barley.

**Tis′ic.** Phthisis.

**Tis′ical.** Phthisic.

**Tis′sue.** The various parts which by their union form the organs, and are, as it were, their anatomical elements. Histological anatomy is the anatomy of the tissues. **Acciden′tal** or **adventit′ious t.**, consists of every substance—foreign to the primitive organization of the economy, but yet organized and living—which may be developed in the interior or at the surface of organs. These have been divided into: 1. Tissues resembling others in the animal economy or analogous accidental tissues. 2. Those having nothing analogous in the body, and which are always the result of a morbid process—the heterologous or heteroclite accidental tissues. **Ad′enoid t.**, connective tissue containing lymphoid cells. **Ad′ipose t.**, tissue composed of fat-cells: a form of connective tissue. **Are′olar t.**, cellular tissue. **Cancel′lous t.**, spongy tissue of bones. **Cartilag′inous t.**, see *Cartilage*. **Cel′lular t.**, connective tissue. **Conjunc′tive t.**, connective tissue. **Connec′tive t.**, see *Connective*. **Crib′riform t.**, connective tissue. **Den′tinal t.**, dentine. **Elas′tic t.**, connective tissue having yellow elastic fibres. **Embryo′nal t.**, mucous t. **Endothe′lial t.**, endothelium. **Epithe′lial t.**, epithelium. **Erec′tile t.**, see *Erectile*. **Fibrocel′lular** or **fi′brous t.**, see *Fibrous*. **Filamen′tous t.**, connective tissue. **Gelat′inous t.**, mucous tissue. **Gland′ular t.**, a variety of epithelial tissue. **Granula′tion t.**, cicatrical tissue formed of granulations. **Het′eroclite** or **heterol′ogous t.**, accidental t. **Homol′ogous t.**, see *Homology*. **Inod′ular t.**, accidental fibrous tissue developed in suppurating wounds, which is the principal agent in cicatrization; it is well seen in the cicatrix left after burns. **Intersti′tial t.**, connective tissue. **Intertu′bular t.**, dense dentinal tissue. **Lam′inated t.**, cellular tissue. **Ligamen′tous t.**, desmoid tissue. **Lym′phoid t.**, adenoid tissue. **Mu′coid t.**, connective tissue, such as is seen in the umbilical cord of the fœtus. **Mu′cous t.**, cellular tissue. **Mus′cular t.**, see *Muscle*. **Ner′vous t.**, see *Nerve*. **Os′seous t.**, see *Bone*. **Phanerog′enous t.**, see *Phanerogenous*. **Phaneroph′orous t.**, see *Phanerogenous*. **Po′rous t.**, cellular tissue. **Retic′ulated t.**, cellular tissue. **Re′tiform t.**, adenoid tissue. **Scle′rous t.**, used collectively for the cartilaginous, osseous, and fibrous tissues. **Tu′bular** or **vas′cular t.**, tissue arranged in the form of tubes.

**Tis′sue-forma′tion.** Histogeny.

**Tis′sue-ma′king.** Histogenetic.

**Tita′nium.** A grayish metal, symbol Ti.

**Tithym′alus cyparis′sias.** Euphorbia cyparissias. **T. lath′yris**, Euphorbia lathyris. **T. latifo′lius**, Euphorbia lathyris. **T. palus′tris**, Euphorbia palustris. **T. paral′ias**, Euphorbia paralias.

**Titilla′tion** (*titillo*, to tickle). Tickling.

**Titra′tion.** The use of standard solutions in making a quantitative analysis.

**Tit′the** (*titthe*, the nipple). Mamma; nipple.

**Tituban′tia.** A staggering.

**Tituba′tion** (*titubo*, to totter). Fidgets; vacillation. Peculiar gait associated with lesion of the cerebellum, more staggering than that of locomotor ataxia. **T. lin′guæ**, stuttering; stammering.

**Tjet′tek.** Upas tieuté.

**Toad′flax.** Antirhinum linaria. **Bas′tard t.**, Comandra umbellata.

**Toad′head.** An appearance of such a kind in some acephalous fœtuses.

**To-and-fro sound.** Friction sound, as in pleuritis, pericarditis, and peritonitis.

**Toast′water.** Made by pouring a quart of water over a slice of toast, allowing the mixture to stand for two hours, and decanting the fluid. A common drink in febrile affections.

**Tobac′co** (*tabacos*, the Caribbean name for the pipe in which it was smoked). Nicotiana tabacum.

**T. amauro′sis**, a form of amaurosis, with atrophy of the optic nerve, met with in those addicted to the excessive use of tobacco. **T. amblyo′pia**, dimness of vision, caused by retrobulbar neuritis from the excessive use of tobacco. **T. bush**, Hedyosmum nutans. **T. deaf′ness**, impaired hearing following the excessive use of tobacco. **Eng′lish t.**, Nicotiana rustica. **T. heart**, disturbed innervation of that organ from excessive use of tobacco, giving rise to palpitation and sometimes producing hypertrophy. **In′dian t.**, Lobelia inflata. **T. poi′son**, Hyoscyamus niger. **T. root**, see *Valeriana*. **Wild t.**, Lobelia inflata; Nicotiana rustica.

**Tobac′coism** or **Tobacco′sis.** Aggregate of symptoms caused by chronic tobacco poisoning, consisting in disturbed vision, irritable and irregular heart, and inflammation of the pharynx.

**To′boe.** Framboesia.

**Tocarex′ia** (*tokos*, birth, *arexis*, help). Obstetrics.

**Tocconibac′co** (Jap.). A convulsive tic resembling myriachit.

**Tocodynamom′eter** (*tokos*, childbirth, *dynamis*, power, *metron*, measure). Instrument with which is measured the force of the contractions of the uterus in parturition.

**Tocol′ogy** (*tokos*, childbirth, *logos*, discourse). Obstetrics.

**Tocoma′nia.** Puerperal insanity.

**Tocom′eter.** Tocodynamometer.

**Todda′lia aculea′ta.** Native shrub of Asia. Root-bark used in India as a remedy for remittent fever and as a tonic and stimulant.

**Todd's ascend′ing pro′cess.** Deep layer of the superficial fascia of the abdomen.

**Tod′dy.** A name given by the English to liquors procured in India by wounding the spathæ of certain palms. The best is obtained from the Cocos nucifera; called also neva; upon boiling it yields a coarse kind of sugar called jaggery. Toddy is also the common name for a mixture of spirit and water sweetened, and usually spiced with nutmeg. **T. tree**, namei.

**Toe.** Digitus pedis. **T. clo′nus**, rhythmical contractions of the big toe following sudden passive extension of the first phalanx, the flexion being produced by contraction of the abductor and flexor brevis pollicis muscles. **Ham′mer t.**, see *Hammer*. **Mor′ton's pain′ful t.**, see *Morton*. **T. phenom′enon**, reflex movement in which the toes are extended when the sole of the foot is stimulated.

**Toi′let.** The careful cleaning up and adjusting of the surface, and of all instruments, etc., by the surgeon or his assistants, before and after an operation. **T. of the peritone′um**, cleansing and readjustment of internal parts after abdominal section.

**To′kelau ring′worm.** Tinea imbricata.

**Tokol′ogy.** Tocology.

**To′la.** Tonsil.

**Tol′erance** (*tolero*, to bear). The power of bearing or resisting large doses of certain potent remedies. The individual is said to be *tolerant*.

**Tolu′** (from Tolu in South America). See *Toluifera balsamum*.

**Toluene′.** Oily, colorless liquid obtained from coal-tar and in the dry distillation of certain organic substances. It is also called toluol, methylbenzene, and phenylmethane.

**Tolu′ic acid.** $C_8H_8O_2$. Acid obtained from toluene.

**Toluidin′.** $C_7H_9N$. A principle derived from toluene.

**Toluif′era bal′samum.** The tree, ord. *Leguminosæ*, which affords the tolu, balsam of tolu, balsamum tolutanum (Ph. U. S. and Br.), red balsam of Peru. It has a very fragrant odor and warm, sweetish taste, is thick and of a reddish-yellow color. It is a stimulant and expectorant, and is used in coughs as a vehicle and as a dressing in surgery.

**Tol′uol.** Toluene.

**Tolu′ylene.** A bivalent radical. **T. di′amin**, $C_7H_{10}N_2$, has a violent toxic effect on the liver, causing a severe form of jaundice.

**To′lylantipyrin′.** See *Tolypyrin*.

**Tolypyrin′.** Paratolyldimethylpyrazolon. Betatolyldimethylpyrazolon. Tolylantipyrin. Methylantipyrin. Antipyrin in which a hydrogen atom of the phenyl radical is substituted by a methyl group; antiarthritic, antipyretic, and analgesic. **T. sal′icylate**, tolysal.

**Tol′ysal.** Paratolyldimethylpyrazolon salicylate; antirheumatic, antineuralgic, and antithermic; dose, gr. xv (1.0).

**Toma′to.** Solanum lycopersicum.

**Tom′bac.** Lobelia. Tobacco. Agallochum.

**Tomen′tum cer′ebri** (*tomentum*, a flock of wool). The plexus of small vessels passing between the pia mater and convolutions of the brain.

**Tomes's fi′brils.** Processes from odontoblasts occupying the dentinal tubules.

**Tomoma′nia** (*tome*, incision, *mania*). Intense desire to operate exhibited by the surgeon, or morbid desire to be operated upon.

**Tomoto′cia** (*tome*, section, *tokos*, parturition). Cæsarean section.

**Tom′toe.** Pollex pedis, great toe.

**Tone** (*tonoo*, to give vigor). State of tension or firmness proper to each organic tissue. It is the effect of tonicity. Also character of sound. **T.-deaf′ness**, amusia.

**Ton′ga.** See *Datura sanguinea*.

**Tongine′.** Volatile alkaloid contained in tonga.

**Tongue.** A muscular, symmetrical, and very mobile organ situated in the mouth from the os hyoides and epiglottis to the incisor teeth. Its particular use is to procure the sensation of savors, and it aids in the acts of sucking, mastication, deglutition, pronunciation, and exspuition. The upper surface, called the dorsum, is free, flat, and divided into two portions by a median furrow, linea mediana, at the posterior extremity of which is the foramen cæcum or foramen of Morgagni. The inferior surface is free and covered by the mucous membrane on its anterior third and sides; but behind and in the middle it is attached to the lower jaw by means of the genioglossus, and to the hyoides by the hyoglossus. Its tip, or point, or dental extremity, is rounded and free; the root, base, or hyoid extremity, radix linguæ, is continuous with the epiglottis and velum palati. The tongue is composed of muscles and covered by a mucous membrane which below forms the frænum of the tongue. On this membrane are seen the different papillæ. The nerves of the organ proceed from the inferior maxillary, glossopharyngeal, and hypoglossal. The arteries are the lingual, from the external carotid, and the palatine and tonsillar, from the labial. The veins are the superficial lingual, ranine, lingual, and submental. They open into those of the pharynx and larynx. Its lymphatic vessels pass into numerous ganglia situated at the edge of the hyoglossi muscles. Two glands beneath the tongue, immediately behind the frænum, have received the name glands of Blaudin, after that anatomist; see *Sublingual gland*. **Black t.**, a fever which prevailed in the Western States in the winter of 1842–43; probably typhoid fever; according to some, an epidemic erysipelas. **Film′y t.**, a condition of the t. in which there are whitish, symmetrical patches on the two sides. **Furred t.**, see *Fur*. **Geograph′ical t.**, see *Lingua geographica*. **Hair′y t.**, condition of the organ in which there are hair-like elevations of the papillæ. **Her′nia of the t.**, glossocele. **Inflamma′tion of the t.**, glossitis. **Mapped t.**, see *Lingua geographica*. **Par′rot t.**, dried and shrivelled tongue of typhus fever, that cannot be protruded from the mouth. **Red t. fe′ver**, typhus. **Straw′berry t.**, see *Strawberry*. **T. trac′tion**, Laborde's method. **Wood′en t.**, the tongue of actinomycosis.

**Tongue-and-groove su′ture.** See *Suture*.

**Tongue-depres′sor.** An instrument, consisting of a spatula attached to a handle, for depressing the tongue in examinations of the mouth.

**Tongue-tie.** Ankyloglossia.

**Ton′ic** (*tonikos*). Relating to tone. Tetanic. In therapeutics, a medicine which has the power of exciting slowly and by insensible degrees the organic actions of the different systems of the animal economy, and of augmenting their strength in a durable manner. Bitter vegetable substances which are not associated with an acrid or narcotic principle, preparations of iron, etc., act as tonics. **T. pow′er,** irritability. **T. spasm,** a rigid contraction of muscles without relaxation, as in trismus, tetanus, etc. See *Tetanus* and *Spasm.*

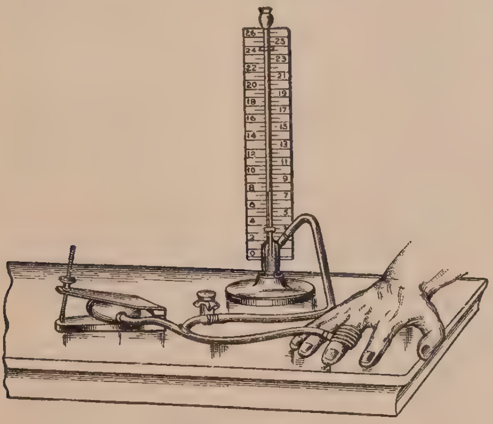
**Tonicity,** to-nis′it-e. The faculty that determines the general tone of the solids. Excessive tonicity causes erethism or crispness; deficient tonicity, atony or weakness. Irritability.

**Ton′ka bean.** Dipterix odorata.

**To′no.** Frambœsia.

**To′nograph.** A tonometer arranged so as to record results.

**Tonom′eter** (*tonos,* tension, *metron,* measure). Instrument for measuring the degree of resistance to pressure, as in estimating the tension of the eyeballs, blood pressure, etc. Also an instrument for measuring the rapidity of vibrations of sounding bodies. **Gärt′ner's t.,** an apparatus for determining the degree of blood pressure; it consists of a metal ring lined with a bag of thin rubber tissue, connected by means of a tube with a bulb; in the centre of the connecting tube opens another tube attached to a manometer. The ring is passed over a finger made bloodless by an elastic bandage, and the bulb is compressed so that air is forced under the ring, making a pressure greater than that in the digital arteries; the pressure is now gradually reduced until the tip of the finger turns pink, the point at which this occurs being read off from the manometer.



Gärtner's tonometer.

**Tonom′etry.** Measurement of tension. See *Tonometer.*

**To′nophant.** An instrument devised for the purpose of making vibrations of sound visible.

**To′noscope.** An instrument devised for examination of the interior of the head through the agency of sound.

**Tonot′ic** (*tonos,* tension). Tonic.

**Ton′quin bean.** Tonka bean; T. musk; Chinese or Thibet musk.

**Ton′sil.** Almond of the ear, almond or bulb of the throat, faucial tonsil. An ovoid collection of follicles about half an inch in length, similar in shape to an almond, and situated on each side between the pillars of the velum palati. The inner surface, projecting into the isthmus of the throat, is covered by the mucous membrane, in which are the orifices of a dozen crypts, whence a transparent viscid mucus oozes on pressure. **T. of cerebel′lum,** see *Amygdala.* **Fau′cial t.,** see *Tonsil.* **Lin′gual t.,** collection of lymphoid tissue at the root of the tongue. **Lusch′ka's t.,** pharyngeal t. **Pharyn′geal t.,** mass of lymphoid tissue across the back part of the cavity of the pharynx, between the two Eustachian tubes. **Third t.,** pharyngeal t.

**Tonsil′la.** Tonsil.

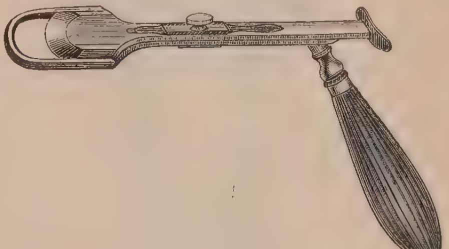
**Ton′sillar.** Belonging or relating to the tonsils, as the t. branches of the glossopharyngeal nerve. **T. ar′tery,** branch of facial artery to the tonsil.

**Tonsillit′ic.** Relating to inflammation of the tonsil.

**Tonsilli′tis.** Cynanche tonsillaris; inflammation of the tonsil; quinsy. **Acute′ catar′rhal t.,** a form of acute follicular sore throat or tonsillitis, in which the tonsils are red and swollen. **Acute′ follic′ular t.,** a form of t. having local and general symptoms of acute pharyngitis. **Acute′ parenchym′atous t.,** quinsy. **Aph′thous t.,** a form of follicular t. characterized by aphthous, sometimes pseudomembranous, symptoms. **Chron′ic catar′rhal t.,** chronic follicular t. with persistent hypertrophy of the tonsils, often requiring an operation. **Diphthe′rial** or **diphtherit′ic t.,** see *Diphtheria.* **Erythem′atous t.,** form of follicular t. in which the tonsils are red and swollen. **Follic′ular t.,** simple catarrhal inflammation of the tonsillar follicles. **Gan′grenous t.,** a variety of the pseudomembranous form of acute follicular tonsillitis. **Herpet′ic t.,** t. in which the tonsils are covered with herpetiform vesicles. **Lacu′nar t.,** a form of follicular tonsillitis in which the follicles are clogged up with cheesy deposits. **Mycot′ic t.,** t. caused by fungi. **Necrot′ic t.,** a pseudomembranous form of acute follicular t., sometimes called gangrenous tonsillitis. **Pseudomem′branous t.,** a form of acute follicular inflammation, accompanied by a deposit of false membrane on the surface of the tonsil. **Pus′tular t.,** t. characterized by the presence of pustules. **Sup′purative t.,** quinsy. **Ul′cerative t.,** pharyngitis ulcerosa.

**Ton′sillolith** (*lithos,* stone). Calculus or concretion in the tonsil.

**Ton′sillotome** (*tome,* incision). Instrument for ablation of the tonsils. Amygdalotome.



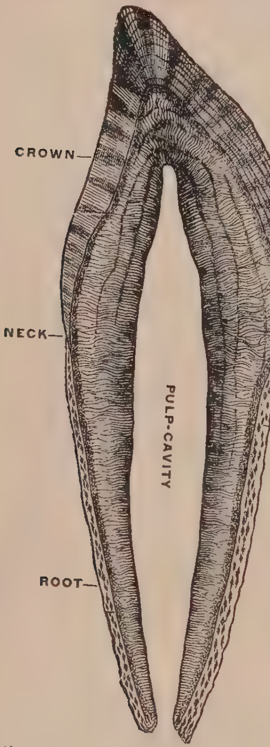
Mackenzie's tonsillotome.

**Tonsillot′omy.** Incision into or excision of a tonsil.

**To′nus.** Tone; tonic spasm; tonicity.

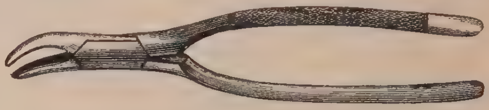
**Toot.** Coriaria ruscifolia.

**Tooth.** The teeth are small, hard bodies fixed in the alveoli of each jaw, and serving to seize, cut, tear, and triturate alimentary substances. True teeth are found only in man, the mammalia, reptiles, and fish. The teeth have, in general, the shape of an irregular cone, the base of which is toward the interior of the mouth, and the apex, single or divided, toward the bottom of the alveoli. Each tooth has a part situated outside the alveolus and covered by a vitriform substance. This part is called the *crown* or corona; it is bounded by a narrower portion called the *neck* or cervix, which separates it from the portion in the alveolus—the *fang* or *root,* odontorrhiza. In the adult the teeth are 32 in number, 16 to each jaw; these consist of 4 incisors, 2 canines, 4 bicuspids, and 6 molars. (See these various terms; also *Dentition.*) The teeth enclose a vascular and nervous pulp in a central cavity (cavitas pulpæ, cavum dentis, antrum dentale). They are formed



Axial section of a human tooth having but one root.

of a very hard, compact tissue, and the corona is covered by a vitreous substance called *enamel* (substantia vitrea or adamantina). The enamel organ —organon adamantinum—is a peculiar structure formed in the development of the teeth by the growth and multiplication of epithelial cells dipping down into the mucous tissue. With a papilliform process developed in the same tissue the rudiment of the tooth is formed. The ivory of the tooth, *dentine* (ebur, substantia eburnea, substantia ossea of Malpighi, proper tooth-substance, bone of the tooth, osseous substance of tooth, tooth-bone), consists of tubular fibres—dentinal fibres—which contain organic deposits of calcareous salts and of intertubular substance, in which are observed corpuscles or osseous cells of the tooth, called calcigerous cells, which also contain earthy salts. At the part where the enamel terminates, at the cervix of the tooth, the *crusta petrosa* or fibrosa (cortex osseus, cæmentum, cementum, or cortical substance) commences in an extremely thin stratum in a thin layer of true bone, slightly modified in structure; passes down and gradually increases in thickness toward the extremity of the root, where it is generally the thickest. The name *tooth-bone*, substantia ostoidea, has been applied to it, as also materia tartarea. It has been found, however, that the hard substance deposited on the inner surface of the dentine at the age of twenty years or later, and which encroaches on the cavity, has a distinct structure from the cement, and resembles in part dentine and in part bone. It is the horny substance of Blumenbach, osteodentine of Owen, and secondary dentine of Tomes. In the compound teeth of herbivorous animals a deposition is found on the surface of the enamel, called cementum. The *dental glands of Serres* are small, white bodies seen, anterior to the eruption of the teeth, studding the mucous membrane. They are caused by the prominences of the outer epithelial layer of the enamel organ. **T. bone,** see *Tooth*. **T.-cough,** a reflex cough excited by caries or other morbid process in the teeth. **Decid'uous t.,** see *Dentition*. **Denu'ding pro'cess of a t.,** gradual removal of the enamel without evidence of disease; most common in old persons. **T. edge,** great sensibility of the teeth, especially to acid or acerb substances. **T. for'ceps,** a strong forceps used in tooth extraction. **T. germ,** ingrowth of epithelium and connective tissue that later forms the complete tooth. **T. key,** an instrument for prying a tooth out of its socket. **Milk t.,** see *Dentition*. **T. moulds,** see *Moulds*. **T. paste,** dentifrice. **Per'manent t.,** see *Dentition*. **T. pulp,** vascular tissue around which dentine is formed in the development of a tooth. **T. rake,** instrument for scaling the teeth. **T. rash,** strophulus. **T. sac,** connective-tissue covering of tooth-germ and enamel-organ during the development of a tooth. **T. shell,** see *Dentalium*. **Tem'porary t.,** see *Dentition*. **T. wort,** Anthemis pyrethrum; Plumbago europæa. **T. wounds,** wounds inflicted by the teeth of animals; they are punctured, penetrating, or lacerated, and often serious in result.



Tooth forceps.

**Tooth'ache.** Odontalgia. **T. bush,** Xanthoxylum fraxineum. **T. tinc'ture,** see *Tincture*. **T. tree,** Aralia spinosa, Xanthoxylum clava herculis.

**Tooth's type.** Neural progressive muscular atrophy.

**Topæsthe'sia** (*topos*, place, *aisthesis*, sensation). Tactile sense of localization.

**Topal'gia.** Topoalgia.

**To'pasol G., I., II., III.,** etc. Various mixtures of zinc and other sulphates, having antiseptic properties; they are called anticornutin, antimucorin, and other names.

**Topha'ceous.** Relating or belonging to tophus. **T. concre'tion,** tophus.

**To'phi.** See *Tophus*.

**To'phus** (sandstone). Tophaceous concretion. A collection of hard, calcareous matter, which forms particularly at the surface of joints affected with gout (arthrotophus), and occasionally in the interior of organs, around the teeth, etc. Chalaza. Gravel. **Den'tal t.,** gouty deposit at the root of a tooth. **Syphilit'ic t.,** syphilitic node.

**Tophyperidro'sis** (*topos*, a place, *phyer*, above, *hidros*, sweat). Local hypersecretion of sweat.

**Top'ic** (*topos*, a place). Local; a local application.

**Top'ical.** Local; applied to a particular part.

**Topinard's** (top-in-ars') **angle.** Facial angle. **T.'s pro'file line,** line drawn from a point between the superciliary ridges to the most prominent point of the lower part of the face.

**Topoal'gia** (*topos*, place, *algos*, pain). A settled neuralgic pain met with in nervous exhaustion.

**Topograph'ical** (*topos*, a place, *grapho*, to describe). Relating to topography, or the description of a particular locality. **T. anat'omy,** see *Anatomy*.

**Toponarco'sis** (*topos*, place). Local anæsthesia.

**Toponeuro'sis** (*topos*, place). Local neurosis.

**Topon'ymy** (*topos*, place, *onyma*, name). Description of organs in relation to position or direction.

**Topopho'bia** (*topos*, place, *phobos*, fear). Excessive dread of any particular place.

**Topothermæsthe'sia** (*topos*, place, *therme*, heat, *aisthesis*, sensation). Temperature sense.

**Topothermæsthesiom'eter** (*metron*, measure). An instrument to test the temperature sense.

**Tor'cular** (*torqueo*, to twist). Tourniquet. A press for wine, oil, or cider. **T. Heroph'ili,** press of Herophilus, fourth sinus, confluence of the sinuses;

a smooth and polished cavity, of irregular shape, in which several sinuses of the dura mater meet; situated before the internal occipital protuberance at the union of the three great duplicatures of the dura mater. It has six openings into it: one above, that of the superior longitudinal sinus; two below, answering to the occipital sinuses; one anterior, belonging to the straight sinus; and two lateral and very broad, which lead into the lateral sinus, and convey from the cavity the blood that has been poured into it by the others.

**Tor′culum** (*torqueo*, to twist). Tourniquet.

**Tordyl′ium officina′le.** Tordylum. Seeds and roots of this Southern European plant are considered carminative and diuretic. They enter into the composition of the theriaca.

**Tore′nia asiat′ica** (after Olaf Toren, a pupil of Linnæus). Small Malabar plant, the juice of whose leaves is said to cure gonorrhœa.

**Tor′ic.** Periscopic; relating to a torus.

**Tor′men.** Colicky pain. See *Tormina.*

**Tor′mentil.** Geranium maculatum; tormentilla.

**Tormentil′la.** Common tormentil, upright septfoil, ord. *Rosaceæ.* The root has a slightly aromatic odor and styptic taste; it is astringent. **T. erec′ta** or **officina′lis** or **sylves′tris** or **tubero′sa,** the various species of tormentil employed in medicine.

**Tormen′tum** (*torqueo*, to twist). Pain, suffering; ileus; intussusception.

**Tor′mina** (pl. of *tormen*, gripes). Acute colicky pains. Dysentery. **T. Cel′si,** dysentery. **T. parturien′tium,** labor pains. **Post-par′tum t.,** after-pains.

**Tor′minal.** Relating to tormina.

**Tor′minous.** Relating to or affected with tormina.

**Tor′modont** (*tormos*, a hole or socket, *odous*, tooth). Having teeth set in sockets.

**Tornac′ulum** (*torqueo*, to twist). Tourniquet.

**Toros′ity** (*torosus*, brawny). Muscular strength.

**Torpefac′tio universa′lis** (*torpeo*, to be torpid, *facio*, to make). Torpidity of the whole body.

**Tor′pid** (*torpeo*, to be sluggish). Numb. Incapable of exertion and of feeling. Dull; stupid; inactive.

**Torpid′ity.** Torpor.

**Tor′por.** Torpidity. State of a part which becomes numb and almost incapable of motion. Torpor, torpidity, torpidness, torpitude, are also applied to a debilitated, sluggish condition of a part or of the whole of the body; narcosis. **T. intestino′rum,** constipation. **T. ret′inæ,** a condition of the retina in which a high degree of luminousness in the object seen is essential to its appreciation by the retina. **T. soporif′icus,** lethargic torpor.

**Torrefac′tion** or **Torrefica′tion** (*torreo*, to parch). Application of a high degree of heat, but not sufficient to produce carbonization.

**Tor′refy** (*torreo*, to parch). To dry over a very hot fire, without ignition or carbonization.

**Torsiom′eter.** Instrument for investigation of the declination of the meridians of the eye.

**Tor′sion** (*torqueo*, to twist). The act of twisting. Torsion of the extremities of bleeding vessels is sometimes used to arrest hemorrhage. Also rotation of the eyeball upon the line of sight as an axis. **T. of teeth,** forcible rotation of the teeth in their sockets.

**Torsoclu′sion.** Acupressure and torsion combined.

**Torticol′lis** (*torqueo*, to twist, *collum*, neck). Stiff-neck, wryneck. A form of muscular rheumatism, seated in the neck, which prevents the motion of the head and causes the patient to hold it inclined to the side affected. It is commonly of short duration, usually disappearing in a few days. Also permanent contraction of the muscles of the neck, *t. spastica,* which causes the head to be held to one side. The remedy is the division of the contracted muscles. **Fixed t.,** chronic shortening of the neck muscles, especially of the sternomastoid. **Rheumat′ic t.,** stiffneck, caused by rheumatism of the cervical muscles.

**Torto′sa lic′orice.** Variety of Spanish licorice.

**Tortu′ra o′ris** (*torqueo*, to twist). Canine laugh; neuralgia faciei. **T. o′ris paralyt′ica Linnæ′i,** Bell's palsy.

**Tor′ula cerevis′iæ.** T. aceti, yeast plant. One of the simplest forms of vegetation, capable, under favorable circumstances, of vegetating rapidly, and assisting in producing the fermentation of saccharine substances. This plant has been found in vomited fluids and in fæces. **T. ure′æ** (Pasteur), Micrococcus ureæ.

**Tor′uloid.** Resembling yeast.

**Tor′ulus glan′dis** (dim. of *torus*, a fleshy part). Crown of the glans penis.

**To′rus** (a fleshy part). A smooth, rounded, bulging like that over a contracted muscle. The tuber cinereum. Any curved solid part in anatomy. **T. fronta′lis,** prominence of the forehead over the frontal sinuses. **T. ma′nûs,** metacarpus. **T. occipita′lis,** prominence at times present on the upper portion of the occipital bone. **T. palati′nus,** prominence at times seen on the hard palate at the junction of the intermaxillary and palatomaxillary sutures. **T. spira′lis,** stria acustica. **T. u′teri,** thick fold at the point of reflection of the uterine and vaginal peritoneum.

**To′ta bo′na** (all good). Chenopodium bonus Henricus.

**Tot′su ka′so.** Sphæria sinensis.

**Tot′ty.** Vertiginous.

**To′tum carno′sum** (all fleshy). Pancreas.

**Touch.** Taction, palpation. One of the five senses, which makes known to us the palpable qualities of bodies. It is seated particularly in the hands, and differs from tact in being active. Also examination by means of the sense of feeling. *To touch* the mouth with mercury is to produce the constitutional effects of that agent, as evinced by the falling away of the gums, etc. **Abdom′inal t.,** touch applied to the abdomen to determine the existence of pregnancy. **T. bodies,** corpuscula tactûs. **T. cells,** bulbous enlargements, formed by division of the axis-cylinders of the touch corpuscles. **T. cor′puscles,** corpuscula tactûs. **Rec′tal t.,** examination by the introduction of the finger into the rectum. **Roy′al t.,** it was at one time believed in England that the royal touch would remove scrofula or king's evil (as it was thence called). Edward the Confessor was the first English king who *touched* for the evil. Medals of gold or silver were often suspended around the necks of the persons touched. These were called *touching* or *healing pieces.* **Vag′inal t.,** examination by the finger or fingers introduced into the vagina. **Ves′ical t.,** examination of the female bladder by a finger introduced into the urethra. **T. wood,** Boletus igniarius.

**Touch-me-not.** Impatiens fulva.

**Touch′wood.** Boletus igniarius.

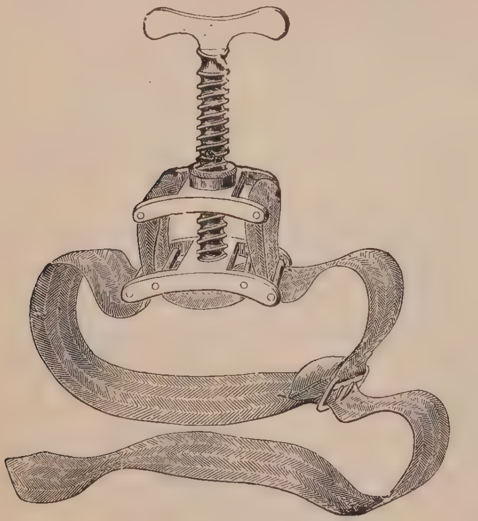
**Toule′ma.** Canna starch.

**Touloucounin′.** See *Carapa touloucouna.*

**Tour de maître** (master turn). Term indicating a method of introducing a metal sound or catheter into the urethra; the point is entered into the meatus while the tip of the instrument looks downward, then as the instrument proceeds it is turned so that the point looks upward as it sweeps under the arch of the pubis. The same procedure, but reversed, was employed in passing a sound into the uterine canal.

**Tourette's** (too-rets′) **disease′.** A disordered condition, the principal symptoms of which are convulsions, incoordination of muscular movements, echolalia, and coprolalia. **T.'s sign,** in hysteria there is sometimes a reversal of the proportion of earthy and of alkaline phosphates in the urine.

**Tour′niquet** (Fr., *tourner*, to turn). A surgical instrument for stopping the course of blood in a limb by exerting a strong compression upon the principal artery. It is used to suspend, for a time, the circulation in a limb during major operations, to arrest arterial hemorrhage in cases of wounds, to compress certain aneurysmal and other tumors, etc. **Dupuytren's′ t.**, see *Dupuytren*. **Es′march's t.**, see *Esmarch*.



Petit's tourniquet.

**Tous-les-mois** (Fr., every month). Canna.

**Tow.** Coarse hempen fibres, used in surgical dressings.

**Town cachex′ia.** The general cachectic, anæmic condition of the poor in densely populated towns.

**Toxæ′mia.** Blood poisoning by bacterial toxins, leucomains, or inorganic poisons. Septicæmia; pyæmia. **Au′to-t.**, a condition of blood poisoning resulting from the absorption of excrementitious toxins, usually from the intestinal canal. **Men′strual t.**, auto-t. resulting from the absorption of retained and altered menstrual fluid. **Mucin′ t.**, t. thyreopriva. **T. thyreopri′va**, a condition following excision of the thyroid gland, marked by myxœdema and tetany; called also *mucin t.*

**Toxæ′mic.** Toxicohæmic, hæmatotoxic, hæmotoxic.

**Toxalbu′min.** A toxic albumin of animal, vegetable, or microorganic origin. A poisonous substance derived from cultures of pathogenic bacteria; not a definite chemical substance, but a mixture of an inert proteid with a toxin.

**Toxal′bumose.** A toxic form of albumose.

**Toxanæ′mia.** Anæmia produced by toxæmia.

**Toxen′zyme.** Poisonous form of ferment.

**Tox′ic.** Poisonous.

**Toxicæ′mia.** Toxæmia.

**Tox′icant.** Poison. An intoxicant.

**Toxica′ria macassarien′sis.** See *Upas*.

**Toxic′ity.** Condition capable of exerting a poisonous effect or influence.

**Toxicoden′dric acid.** Volatile acid in fresh leaves of Rhus toxicodendron and other species of rhus.

**Toxicoden′drol.** Poisonous vesicant oil; active principle of Rhus toxicodendron.

**Toxicoden′dron.** Rhus toxicodendron.

**Toxicoder′ma** or **Toxicodermati′tis** (*toxicon*, poison, *derma*, skin). Inflammation of the skin due to the action of poisons.

**Toxicogen′ic.** Forming or producing poison.

**Toxicohæ′mia.** Toxæmia.

**Tox′icoid** (*eidos*, resemblance). Resembling a poison.

**Toxicolog′ical.** Relating to toxicology.

**Toxicol′ogist.** A specialist in toxicology.

**Toxicol′ogy** (*toxicon*, poison, *logos*, description). Science in relation to poisons.

**Toxicoma′nia.** Uncontrollable and excessive desire for intoxicants. A dread of taking poisons.

**Toxicomucin′.** Toxomucin.

**Toxicop′athy.** Disease caused by a poison or toxin.

**Toxicopho′bia** (*phobos*, fear). A dread of poisoning.

**Toxicophylaxin′.** Toxophylaxin.

**Toxico′sis.** A disease caused by the introduction of poison into the system.

**Toxidermi′tis.** Toxicodermatitis.

**Toxif′erous.** Carrying poison.

**Toxihæ′mia.** Toxæmia.

**Toxin′.** Poisonous substance produced by the action of microorganisms. It is either a toxalbumin, such as the specific poison of diphtheria or tetanus, or a bacterial protein which is less poisonous.

**Toxinæ′mia.** Poisonous action of toxins on the blood.

**Toxinfec′tion.** Infection of the system through the agency of a toxin or poisonous matter.

**Toxin′icide** (*cædo*, to kill). A substance that is destructive to toxins.

**Toxipho′bia.** Morbid fear of being poisoned.

**Toxiphor′ic** (*phoreo*, to carry). Toxiferous.

**Toxires′in.** Cardiac poison produced by action of acids upon digitoxin.

**Tox′is.** Condition resulting from poisoning, particularly by toxins.

**Tox′oalexin′.** Poisonous products of bacteria. See *Alexin*.

**Toxoglobulin′.** A poisonous globulin.

**Tox′oid.** A toxin which has lost in greater or lesser degree its toxic property, while retaining its activity in respect to neutralization by antitoxin; in other words, a toxin which has lost its toxophore group but retains its haptophore group. According as the toxoid possesses a diminished, equal, or increased affinity for antitoxin than did the original toxin, it is called epitoxoid, syntoxoid, or protoxoid; the former, which is an earlier product of the specific bacteria, is called toxon; the two latter are the true toxoids.

**Toxomucin′.** Substance extracted from tubercle bacilli by means of a solution of caustic soda, producing, when injected in mice and guinea-pigs, cutaneous necrosis.

**Tox′on.** See *Toxoid*.

**Toxopep′tone.** Toxic proteid substance, allied to peptone, especially one resulting from the action of the comma bacillus on peptones.

**Tox′ophore** (*toxikon*, poison, *phero*, to bear). Term applied to the special atom groups of a toxin upon which its poisonous action depends. These groups are unstable and disappear from the toxins in cultures that have been kept for some time, the haptophore groups remaining, the toxins thus becoming toxoids.

**Toxophylaxin′** (*phylasso*, to guard). A defensive proteid produced in the body of an animal which has an acquired immunity for a given infectious disease, and which has the power of destroying the toxic products of the pathogenic bacteria to which the disease is due (Sternberg).

**Toxosozin′** (*sozo*, to save). A defensive proteid found in the body of a normal animal, which has the power of destroying the toxic products of bacterial growth (Sternberg). See *Alexin*.

**Toyn′bee's cor′puscles.** Corpuscles of the cornea. **T.'s exper′iment**, rarefaction of the air of the middle ear produced by the act of swallowing with closed mouth and nares. **T.'s law**, see *Gull-Toynbee's law*. **T.'s lig′ament**, tensor ligament; sheath of the tendon of the tensor tympani muscle.

**Trabec′ulæ** (dim. of *trabs*, a beam). Prolongations of fibrous membranes which form septa, as in the corpora cavernosa and the testes; medullary fibres which form the commissures; fleshy projections which form the columnæ carneæ. **T. car′neæ**, columnæ carneæ. **T. cer′ebri**, corpus callosum. **T.**

**cor'dis**, columnæ carneæ. **T. cor'porum cavernoso'rum**, see *Cavernous bodies*. **T. sple'nis**, see *Spleen*. **T. Willis'ii**, chordæ Willisii.

**Trabec'ulated.** Having trabeculæ.

**Tra'bes cor'dis** (pl. of *trabs*, a beam). Columnæ carneæ.

**Trabs** (a beam), or **T. cer'ebri**, or **T. medulla'ris.** Corpus callosum.

**Trace, prim'itive.** Primitive groove.

**Trachea**, tra-ke'ah or tra'ke-ah (*trachys*, rough, *arteria*, artery, understood). Windpipe. A cylindrical, fibrocartilaginous, and membranous tube, flattened behind, and situated on the median line before the vertebral column, from the inferior part of the larynx as far as the third dorsal vertebra. There it divides into two branches—the bronchiæ—which separate, one to go to each lung. The trachea, the function of which is to convey air to the lungs during respiration, is composed—1, of cartilaginous rings (annuli cartilaginei, segmenta cartilaginea orbes cartilaginosi), incomplete behind, situated one above the other, and kept in situ by a fibrous membrane; 2, of a mucous membrane, which lines it internally and contains numerous mucous follicles; 3, of transverse muscular fibres, not well marked, which occupy its posterior surface; 4, of vessels which proceed from the superior and inferior thyroideal; 5, of nerves given off by the pneumogastric and cervical ganglia. Also the breathing-tube of an insect. **T. arte'ria**, trachea.

**Tracheaëc'tasy** (*ektasis*, stretching). Dilatation of the trachea.

**Tra'cheal.** Appertaining to the trachea. **T. ar'teries**, branches of the inferior thyroid artery supplying the trachea. **T. glands**, mucous follicles on the posterior surface of the trachea. **T. nerves**, branches of the recurrent laryngeal nerves to the trachea. **T. plex'us**, continuation of the thyroid plexus of veins lying in front of the trachea. **T. respira'tion**, respiration as heard through the stethoscope opposite the trachea, larynx, and root of the bronchia, the air appearing as if sucked in from the cylinder during inspiration and expelled during expiration. **T. tug'ging**, downward displacement of the larynx, produced by pressure of an aneurysm of the transverse portion of the arch of the aorta, occurring with each systole.

**Trachea'lia.** Tracheitis.

**Trachea'lis.** The fibres of unstriped muscle passing from one portion of each of the tracheal cartilages to the other at the posterior part of the trachea. When they contract they approximate the extremities of the cartilage, diminish the calibre of the trachea, and thus increase the velocity of the air forced through it, as in coughing, and facilitate the removal of any irritating substances in contact with the lining membrane.

**Trachei'tis.** Inflammation of the trachea.

**Trachelæmato'ma** (*trachelos*, neck). A hæmatoma in the cervical region, on the sternomastoid muscle.

**Trachelagra**, trak-el-ag'rah (*trachelos*, neck, *agra*, seizure). Torticollis; also gout in the neck.

**Trachelectomopex'ia, Trachelectomopex'y** (*trachelos*, neck, *ektome*, excision, *pexis*, fastening). Fixation and excision of the neck of the uterus.

**Trache'lian** (*trachelos*, neck). Cervical.

**Trachelias'mus** or **Trachelis'mus** (*trachelos*, neck). Spasmodic action of the muscles of the neck, causing compression of the veins of the neck and an impeded return of blood from the head.

**Tracheli'tis.** Inflammation of the cervix uteri.

**Trache'lium america'num.** Lobelia cardinalis.

**Tracheloclavicula'ris i'mus.** Muscular slips at times found in man, running from the clavicle to the occipital bone; undeveloped in the lower animals.

**Trachelocostoscapula'ris.** Serratus magnus and levator anguli scapulæ.

**Trachelocyllo'sis** (*trachelos*, neck, *kyllosis*, laming). Torticollis.

**Trachelocyrto'sis** (*trachelos*, neck, *kyrtosis*, arching). Kyphosis of the cervical spine.

**Trachelodiaphragmat'ic.** The fourth pair of cervical nerves, whence the phrenic nerve chiefly arises.

**Trachelodyn'ia** (*trachelos*, neck, *odyne*, pain). Pain in the neck.

**Trachelol'ogy.** A suggested specialty dealing with diseases and injuries affecting the neck.

**Trachelomas'toid.** Complexus minor muscle.

**Trachelomyi'tis.** Inflammation of the muscles of the neck.

**Trachelo-occipita'lis.** Complexus muscle.

**Trachelopex'ia, Trach'elopexy** (*trachelos*, neck, *pexis*, fastening). Fixation of the neck of the uterus by operation.

**Trach'eloplasty** (*trachelos*, neck, *plasso*, to shape). Operation for restoration of a lacerated cervix uteri.

**Trachelor'rhaphy** (*trachelos*, neck, *rhaphe*, seam). Operation for closure of a laceration of the cervix uteri by paring the edges and suturing. The procedure is generally known as Emmet's operation.

**Trachelot'omy.** Amputation of the cervix uteri.

**Tracheo-a'ërocele.** Air-containing tumor within the trachea; hernia of the trachea.

**Tracheobron'chial.** Relating to both trachea and bronchi.

**Tracheobronchi'tis.** Inflammation of the trachea and bronchia.

**Tra'cheocele.** Bronchocele.

**Tracheolaryn'geal.** Relating to both trachea and larynx.

**Tracheolaryngot'omy.** Surgical operation on the larynx and trachea combined. Laryngotracheotomy.

**Tracheo-œsophageal**, tra-ke-o-e-sof-aj'e-al. Relating to both trachea and œsophagus.

**Tracheo-œsophage'us.** Muscular fibres from the œsophagus to the trachea.

**Tracheopharynge'us.** Fibres of the inferior constrictor of the pharynx inserted in the trachea.

**Tracheoph'ony** (*phone*, voice). Laryngophony.

**Tracheophthi'sis.** Laryngeal phthisis.

**Tracheophy'ma** (*phyma*, a swelling). Bronchocele.

**Tra'cheoplasty.** Plastic surgery of the trachea.

**Tracheopyo'sis.** Suppuration of the tracheal mucous membrane.

**Tracheop'yra** (*pyr*, fever). Tracheitis with fever.

**Tracheorrha'gia.** Hemorrhage from the trachea.

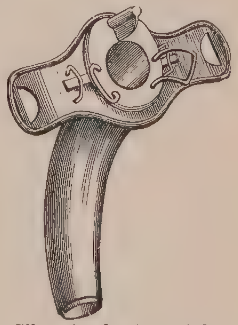
**Tracheos'chisis** (*schizo*, to split). Fissure of the trachea.

**Tracheos'copy** (*skopeo*, to view) Inspection of the trachea by a mirror similar to that for examination of the larynx.

**Tracheosteno'sis.** Contraction or narrowness of the trachea.

**Tra'cheotome** (*tome*, incision). An instrument of the trocar kind for opening the trachea.

**Tracheot'omy.** Incision into the trachea, usually for the purpose of admitting air to the lungs when there is obstruction in the larynx. **Infe'rior t.**, t. performed below the isthmus of the thyroid gland. **Supe'rior t.**, t. performed above the isthmus of the thyroid gland. **T.-tube**, a curved tube for introduction into the opening made in the trachea.



Silver tracheotomy-tube.

**Trachielco'sis** (*helkosis*, ulceration). Ulceration of the trachea.

**Trachi'tis.** Tracheitis. Inflammation of the trachea.

**Tracho'ma** (*trachys*, rough). Granular eyelid, granular conjunctivitis. A contagious palpebral conjunctivitis, characterized by the formation of granulations on the conjunctiva of the eyelids with subsequent cicatricial contraction and deformity. According to the kind of granulation present, three varieties of trachoma were formerly distinguished: *T. sabulo'sum,* with gritty granulations like sand; *t. carunculo'sum,* fleshy excrescences; and *t. herpet'icum,* hard pustules on the inner surface of the eyelids. The disease is due to a specific microorganism. Treatment consists in the application of sulphate of copper and expression of the enlarged follicles constituting the granulations by means of a special instrument, a *trachoma forceps.* The term is also used to express a condition marked by dryness and shrivelling of the vaginal mucous membrane, kraurosis vulvæ. **Arlt's t.**, the same as trachoma or granular conjunctivitis, as above defined. **T. defor'mans**, a form of vulvitis with cicatricial tissue. **Follic'ular t.**, a form of trachoma having translucent, granular bodies on the tarsal conjunctiva. **T. glands,** see *Bruch.* **Gran'ular t.**, follicular t. **Pap'illary t.,** a form of trachoma having red, papillary growths on the conjunctiva. **Türck's t.**, laryngitis sicca.

**Tracho'matous.** Relating to or affected with trachoma.

**Trachypho'nia** (*trachys,* rough, *phone,* voice). Roughness of the voice.

**Tract** (*traho,* to draw out). A track or course; a region of length, rather than breadth. **Alimen'tary t.**, alimentary canal. **Diges'tive t.**, alimentary canal. **Direct' cerebel'lar t.**, ascending tract of nerve-fibres on the posterior part of the lateral column of the spinal cord. **Genito-u'rinary t.**, see *Genito-urinary* and *Urogenital.* **Haben'ular t.**, tract of fibres between the habenula and nucleus ruber. **Intermediolat'eral t.**, tract of fibres in the lateral column of the cord, between the anterior and posterior gray cornua. **Lis'sauer's t.**, see *Lissauer.* **Mo'tor t.**, tract through which a motor impulse travels from the brain to produce muscular action. **Olfac'tory t.**, nerve-like process joining the olfactory tubercle and the bulb. **Op'tic t.**, tract of nerve-fibres between the visual centre, in the occipital lobe, and the optic chiasm. **Prepyram'idal t.**, anterior pyramids of the cord. **Pyram'idal t.**, see *Pyramidal.* **Respi'ratory t.**, see *Respiratory* and *Nerves.* **Semilu'nar t.**, a tract of fibres situated in the external portions of the cerebellum. **Sen'sory t.**, tract of fibres through which sensation travels to the brain. **Spitz'ka's t.**, see *Marginal bundle.*

**Trac'tion.** Act of drawing. **T. an'eurysm,** a. caused by traction on the aorta. **Ax'is t.**, t. exerted in the direction in which a body is to be pulled; term designating a form of obstetric forceps. **T.-divertic'ulum**, a bagging condition of the œsophagus caused by the traction of adhesions to it. **T. of teeth**, pulling force applied to the teeth. **Tongue-t.**, see *Laborde's method.*

**Trac'tor** (*traho,* to draw). Lever. **Metal'lic t.,** see *Perkinism.*

**Tractora'tion.** Perkinism.

**Trac'tus.** Tract. **T. crucia'tus tegmen'ti**, posterior commissure of the brain. **T. ethmoida'lis**, gyrus rectus. **T. intermediolatera'lis**, small group of cells forming a projection of gray matter of the spinal cord opposite the junction of the anterior and posterior cornua. **T. intestino'rum**, intestinal tube. **T. olfacto'rius**, olfactory tract. **T. op'ticus**, see *Optic nerves.* **T. parieta'lis ante'rior**, anterior central convolution. **T. parieta'lis me'dius**, posterior central convolution. **T. respirato'rius**, respiratory tract. **T. semicircula'ris**, fibres in the cerebellum arching over the corpus dentatum to the peduncles. **T. spira'lis foraminulen'tus**, minute openings at the base of the modiolus, arranged in a spiral manner, transmitting filaments of the cochlear nerve. The central canal of the tractus is longer than the rest, and is called *canalis* or *tubulus centralis modioli* or *cochleæ.* Winding closely round the modiolus is a small canal—*canalis spiralis modiolus.* **T. supracallo'sus infe'rior**, gyrus fornicatus. **T. supracallo'sus supe'rior**, marginal gyrus.

**Tradescan'tia virgin'ica.** Spiderwort; indigenous. The roots are demulcent.

**Tragacan'tha.** (Ph. U. S. and Br.) Gum tragacanth, gum dragon. The concrete juice or gummy exudation from Astragalus gummifer and other species of astragalus, ord. *Leguminosæ.* This gum is inodorous, nearly insipid, of a whitish color, semi-transparent, and striated, occurring in thin, vermiform pieces, and does not form smooth, uniform mucilage with water. It is demulcent, but is rarely used alone. The official preparation is *mucila'go tragacan'thæ;* dose, ʒj–iv (4.0–16.0).

**Tragacanthin'.** Organic principle of tragacanth.

**Tra'gal.** Relating to the tragus.

**Tra'gi bar'bula.** See *Tragus.* **T. pi'li,** hairs of the ear.

**Tragicus,** traj'ik-us. Tragus. A small, flat, triangular muscle which almost wholly covers the outer surface of the tragus, arising from its base and terminating at the top of the eminence.

**Tragomaschala** (trag-o-mas'kal-ah) or **Tragomas'chale** (*tragos,* goat, *maschale,* arm-pit). Strong, unpleasant odor of the arm-pits.

**Tragopho'nia** (*tragos,* goat, *phone,* voice). Egophony.

**Tragopo'gon.** Genus of plants, ord. *Cichoraceæ,* of which the roots of the *Tragopogon porrifolium,* salsify, oyster-plant, and the young shoots of the *T. pratense,* meadow salsify, common goat's beard, are eaten as food. The root of the latter plant has been used as a diuretic.

**Tragoseli'num.** Pimpinella saxifraga. **T. angel'ica,** Ligusticum podagraria. **T. mag'num,** Pimpinella magna. **T. ma'jus,** Pimpinella magna. **T. saxif'raga,** pimpinella.

**Tra'gus** (*tragos,* a goat, from its being furnished, in some persons, with hair like the beard of a goat). Small, flattened, triangular nipple covered with hair in old people, situated before the meatus auditorius externus, which it appears to conceal. Also the peculiar goat-like smell of the axillæ. **T. Matthi'oli,** salsola kali.

**Trail'ing ar'butus.** See *Epigæa repens.*

**Train'ing.** System of treating man and animals so as to develop their full physical powers.

**Tram'e** or **Tram'is.** Perineum.

**Trance.** Catalepsy; ecstasis; hypnotic state. **Death t.**, apparent death.

**Tran'cic.** Relating to a trance.

**Trans-.** In composition, through, across, over, or beyond.

**Transcor'tical.** Across the cortex, as of the brain. Relating to or caused by lesions involving cross-regions of the cortex of the brain.

**Transduc'tor hallu'cis.** Transversus pedis.

**Transec'tion.** Section or division across.

**Trans'fer** or **Transfer'ence** (*transfero,* to bear across). Telepathic interchange of thought between two persons widely separated. Passing of disease from one part to another.

**Transfigura'tion** (*figuro,* to form). Transformation.

**Transfix'.** To pierce through.

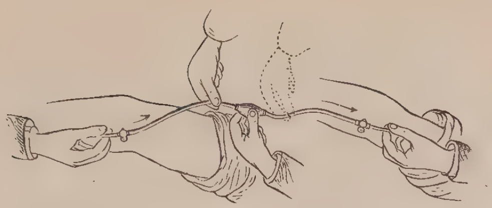
**Transfix'ion.** Act of piercing, as in the formation of flaps in certain amputations.

**Transfora'tion** (*foro,* to pierce). Repeated perforation of the base of the fetal skull in craniotomy.

**Trans'forator.** An instrument with which to perform transforation or perforation of the fetal head.

**Transforma'tion** (*forma,* form). Change of form.

**Transfu'sion** (*trans,* across, *fundo,* to pour). Pouring from one vessel to another. The injection into the blood-vessels of a fluid, either blood or physiological salt solution. **T. of blood,** act of passing the blood of one person into the veins of another. Arterial transfusion is the injection of blood into an artery; immediate or direct when the blood is passed from one person to another through a tube; indirect or mediate when injected from a vessel into which it has been drawn and defibrinated. Used in conditions of collapse following severe hemorrhage. **Direct' t.,** t. practised by direct transference of blood from one



Direct transfusion; the tube, being without valves, is clamped by the fingers of the operator alternately in front of and behind the bulb.

person to another. **Indirect′ t.**, when the blood is defibrinated before being transfused to the patient. **Peritone′al t.**, the blood is injected into the abdominal cavity. **Subcuta′neous t.**, the blood is introduced into the subcutaneous tissue.

**Tran′sient.** Of short duration, temporary. **T. blind′ness**, temporary amblyopia, said to be caused by vasomotor disturbances of the visual centre.

**Transil′iac.** Across the ilium. Across the body from one ilium to the other.

**Transil′ient** (*silia*, to jump). Leaping or passing over. **T. fi′bres**, nerve-fibres which pass from one cerebral convolution to another not immediately adjoining it.

**Transillumina′tion.** Lighting up of a cavity from without, a strong light being passed through its walls.

**Transin′sular.** Across the insula, as the *transinsular fissure*.

**Transi′tion.** Change; passage from one place or condition to another. **T. epithe′lium**, epithelium composed of several layers of cells passing from one to another variety without sharp limit. **T. tu′mor**, see *Tumor*. **T. zone**, see *Zone*.

**Transi′tional.** In the act of changing from one state or place to another. **T. epithe′lium**, see *Transition*. **T. zone**, see *Zone*.

**Transla′tion** (*fero, latum*, to carry). Metastasis.

**Translu′cent** or **translu′cid.** Transmitting light, but not permitting objects to be distinctly seen.

**Transmigra′tion** (*trans*, across, *migro*, to wander). Passage of cells through a limiting wall of membrane; especially applied to the escape of white corpuscles from blood-vessels in inflammation. **Exter′nal t.**, direct movement of the ovum from one ovary to the other. **Inter′nal t.**, movement of the ovum from one ovary to the other, through the channel of the uterus. **T. of the o′vum**, occasionally a corpus luteum is found in the ovary opposite to the one in which the ovum was developed. Such a transition, whether occurring by an extra-uterine or an intra-uterine channel, is called transmigration.

**Transmissibil′ity** (*mitto*, to send). Capability of transmission. Sensibility.

**Transmis′sion.** Passage of a disease or disease-producing agent from one person to another, especially from parent to child by heredity. Also passage of a nerve impulse.

**Transmuta′tion** (*muto*, to change). Transformation.

**Tran′sonance.** Transmission of a sound through an organ, as of the heart sounds through the lungs and the chest wall.

**Transpar′ent** (*trans*, through, *pareo*, to appear). Admitting the passage of light, so that objects can be distinctly seen through intervening media.

**Transperitone′al.** Across the cavity of the peritoneum. Through opposite layers of peritoneum.

**Transpi′rable.** Capable of transpiration.

**Transpira′tion** (*trans*, through, *spiro*, to breathe). Cutaneous exhalation of vapor or volatile matter. Perspiration. **Unilat′eral t.**, perspiration of one-half the body.

**Transplanta′tion** (*planto*, to plant). Plastic surgery, or art of grafting living tissue upon the site of deformity or lesion for the purpose of repairing defect. Pretended method of curing diseases, devised by Paracelsus, by making them pass from one individual to another, either animal or vegetable. **T. of the cor′nea**, substitution of the cornea of an animal for that of man in cases in which the cornea has been destroyed. **T. of the skin**, skin-grafting. **T. of a tooth**, insertion of a tooth taken from one person into the socket left by extraction of a corresponding tooth in another person.

**Trans′port** (*trans*, through, *porto*, to carry). Delirium.

**Transposi′tion** (*trans*, through, *pono*, to place). Change of situation. Abnormal change in the location of an organ. Transfer of tissue from one point to another by plastic operation. **T. of the vis′cera**, congenital vice of conformation, consisting in the presence of the viscera out of the situations they ordinarily occupy, the heart, for example, being on the right side, the liver on the left, etc.

**Trans′udate.** An exhalation at the surface of the skin or of any membrane. See *Transudation*.

**Transuda′tion** (*trans*, through, *sudo*, to sweat). Passage of a fluid through any animal membrane; osmosis. The material that so transudes is called a transudate.

**Transude′.** To pass through a membrane or tissue; to ooze.

**Transversa′lis.** Transverse. **T. abdom′inis**, a muscle deeply seated on the lateral parts of the abdomen; flat, thin, and broader before than behind; attached above to the cartilage of the last true rib and to that of every false rib, and below to the inner lip of the crista of the ilium, to the two outer thirds of the crural arch, and to the upper part of the pubis. Its fibres are inserted behind by means of broad aponeuroses into the top of the transverse and spinous processes of the first four lumbar vertebræ, and, before, into the linea alba and the ensiform cartilage. This muscle, all of whose fibres have a transverse direction, constricts the belly and diminishes the base of the chest by drawing inward the ribs to which it is attached. **T. anti′cus pri′mus**, rectus capitis lateralis. **T. cervi′cis anti′cus**, probably an aberrant intertransversalis longus. **T. cervi′cis me′dius**, probably an aberrant intertransversalis longus. **T. cervi′cis posti′cus mi′nor**, an accessory muscle arising from the transverse process of the upper dorsal or lower cervical vertebræ, inserted into the transverse process of the atlas or mastoid process. **T. collatera′lis col′li**, see *Sacrolumbalis*. **T. col′li**, a muscle attached to the transverse processes of the five or six lower vertebræ of the neck, and to those of the four or five upper dorsal. It extends the neck and inclines it laterally. See *Semispinalis colli*. **T. dor′si**, a muscle, usually called multifidus spinæ, and including all the transversospinales, situated in the vertebral gutters extending from the posterior parts of the sacrum to the second cervical vertebra. It is thicker in the neck and loins than in the back and behind the sacrum. Its use is to straighten the vertebral column and to impress upon it a slight rotary motion. **T. facie′i**, an artery which arises from the temporal, passes transversely across the face in front of the condyle of the lower jaw, and gives its branches to the different muscles of the cheek. **T. fas′cia**, fascia lining the transversalis muscle, joining the diaphragmatic fascia above, attached below to the iliac crest and the whole of Poupart's ligament, except the space where it passes into the thigh to form part of the crural sheath. **T. na′si**, compressor naris. **T. plan′tæ**, transversus pedis.

**Transversa′rius.** Transversus.

**Transverse′** (*trans*, across, *verto*, to turn). That which runs across; also that which relates to the transverse processes of the vertebræ. **T. ar′tery of the face**, transversalis faciei. **T. cer′ebral fis′sure, ante′rior**, a fissure of the brain bounded above by the corpus callosum and fornix, below by the corpora quadrigemina and lateral parts of the optic thalamus. **T. cer′ebral fis′sure, poste′rior**, is situated between the cerebellum above and the medulla oblongata below. **T. cer′vical ar′tery** arises from the thyroid axis, passing across the neck through the subclavian triangle. **T. diam′eter of skull,** breadth of the skull between the parietal prominences. **T. fis′sure,** see *Liver*. **T. fos′sa,** see *Liver*. **T. lig′ament,** part of the cotyloid ligament; coracoid ligament. **T. lig′ament of the at′las,** annular ligament. **T. perine′al ar′tery** is given off from the upper branch of the internal pudic, and passes inward and forward above the transversus perinæi muscle as far as the bulb of the urethra, into which it dips, subdividing into numerous branches. **T. perine′al mus′cle,** transversus perinæi. **T. pro′cesses of the ver′tebræ,** diapophyses of Owen, the bony eminences that jut out transversely and posteriorly from the sides of the vertebræ. **T. su′ture** runs across the face and sinks into the orbit, joining the bones of the skull to those of the face, but with so many irregularities and interruptions that it can scarcely be traced as one suture.

**Transversec′tomy** (*ektome*, excision). Excision of the transverse process of a vertebra.

**Transversospina′lis.** Transversalis dorsi, semispinalis dorsi, multifidus spinæ, rotator spinæ. **T. col′li,** semispinalis colli. **T. dor′si,** semispinalis dorsi.

**Transver′sus.** Transverse. **T. au′ris,** a muscular ligament dividing the concha into two portions. **T. col′li,** a muscle arising from the first costal cartilage and running toward the middle line of the neck. **T. lin′guæ,** intrinsic muscle of the tongue. **T. ma′nûs,** external head of the adductor pollicis. **T. pec′toris,** triangularis sterni. **T. pe′dis,** a muscle arising from the heads of the metatarsal bones of the three outer toes, and inserted into the base of the first phalanx of the greater toe, being blended with that of the adductor pollicis. **T. perinæ′i,** transverse perineal muscle, muscle placed at the posterior part of the perineum. It is thin, triangular, and situated transversely. Its external extremity is attached to the ramus and tuberosity of the ischium; its inner extremity is confounded with its fellow of the opposite side, and with the anterior part of the sphincter ani and posterior part of the bulbocavernosus. Its function is to compress the urethra and to support the rectum and bladder. To a fasciculus of this muscle Santorini has given the name *elevator* or *ejaculator urethræ*. **T. perinæ′i al′ter,** a small muscle occasionally accompanying the last. **T. pros′tatæ,** compressor prostatæ.

**Tra′pa na′tans.** Plant affording the Nuces aquaticæ, Tribuli aquatici, caltrops. The nut is nutrient and demulcent, and used in diarrhœa and in calculus. A poultice is sometimes made of it to soften hard and indolent tumors.

**Trap′eza** (*trapeza*, table). Corona of the jaw teeth.

**Trape′ziometacar′pal.** Relating to or connecting the trapezium and metacarpal bones.

**Trape′zium** (*trapezion*, a table). A quadrilateral figure no two sides of which are parallel. **T. cer′ebri,** a set of nerve-fibres situated in the pons Varolii; central portion of the white substance in the cerebellum; corpus trapezoides. **T. os,** so called from its shape; the first bone of the second row of the carpus; articulated above with the scaphoides; below, with the first bone of the metacarpus; within, with the trapezoides and second metacarpal bone.

**Trape′zius.** A muscle seated at the posterior part of the neck and shoulder and at the upper part of the back, having the shape of a trapezium; attached, on the one hand, to the inner third of the upper curved line of the occipital bone, to the posterior cervical ligament, to the spinous processes of the seventh cervical vertebra and of all the dorsal vertebræ; and, on the other hand, to the spine of the scapula, the acromion, and the outer third of the posterior margin of the clavicle. Its upper fibres are situated obliquely downward and outward; the transverse and inferior, obliquely outward and inward. This muscle elevates the shoulder, carries it backward, or depresses it, according as its upper, middle, or lower fibres contract separately. It straightens the head also, and inclines it to one side.

**Trap′ezoid** (*trapezion* + *eidos*, form). Trapezium-shaped. **T. bone,** second bone of the second row of the carpus, so called from its shape. It is smaller than the trapezium, on the inside of which it is situated. It is articulated, above, with the os naviculare; below, with the second metacarpal bone; on the outside, with the trapezium; and internally, with the os magnum. Anteriorly and posteriorly, it affords attachment to ligaments. **T. lig′ament,** the anterior part of the coracoclavicular ligament, having the shape of a trapezium, situated obliquely between the acromion process and clavicle.

**Trapp's test.** For veratrine: filter a solution containing the suspected substance, heat with hydrochloric acid, and if veratrine is present a dark red color appears.

**Trau′be's cor′puscles.** Phantom or decolorized red corpuscles. **T.'s curves,** rhythmical variations of arterial pressure, after total cessation of respiratory movements and section of both vagi, occurring in animals which have been subjected to the action of curare. **T.'s dyspnœ′a,** dyspnœa with slow movement of breathing, etc., observed in diabetes mellitus. **T.'s phenom′enon,** double sound heard over superficial arteries in aortic insufficiency, mitral stenosis, etc. **T.'s plugs,** Dittrich's plugs. **T.'s space** or **T.'s semilu′nar space,** inferior part of the thorax, on the left side, protruding over the stomach, and lying below *Traube's line*, a curved line in the sixth intercostal space.

**Trau′be-Her′ing curves.** See *Traube's curves.*

**Trau′lism** (*traulismos*, lisping). Vicious and incomplete pronunciation in which almost all the consonants are replaced by the letters *b* and *l*.

**Trau′ma** (*trauma*, wound). A wound caused by external violence; also the injury producing it; also the condition of the organism resulting therefrom.

**Traumat′ic** (*trauma*, a wound). Vulnerary. Anything relating to a wound or injury, as traumatic affections of the skin. **T. fe′ver,** febrile phenomena following a wound.

**Traumat′ica.** Detergents; vulneraries.

**Traumaticine′.** Solution of gutta-percha in chloroform which acts as a protective when applied to the skin.

**Trau′matism.** The condition of the organism occasioned by a grave wound. Trauma.

**Trau′matol.** $C_7H_7IO$. Iodocresol; used as a substitute for iodoform. It contains more than 50 per cent. of iodine.

**Traumatol′ogy.** The science or description of wounds.

**Traumatone′sis** (*trauma*, wound, *nesis*, spinning). Suture of wounds.

**Traumatopnœ′a** (*trauma*, wound, *pneo*, to breathe). A condition met with in wounds of the lung and pleura, in which the air passes in and out of the wound during respiration.

**Traumatop′yra** (*trauma*, wound, *pyr*, fever). Wound fever or fever consecutive to a wound.

**Trav′ail** (Fr., *travailler*, to labor). Parturition.

**Trav′eller's joy.** Clematis vitalba.

**Trea′cle.** Molasses; theriaca. **Eng′lish t.,** Teucrium chamædrys. **Ven′ice t.,** theriaca.

**Tread** or **T. of the cock.** Cicatricula.

**Treat′ment** (*tracto*, to treat). Means employed for the relief of disease. **Apostoli's t., Brand t., Schott t., Woodbridge t.,** etc., see the proper names. **Caus′al t.,** t. directed especially to the removal of the underlying cause of the disease. **Drug t.,** medicinal t. **Dry t.,** restriction in the amount of fluid taken. **Expect′ant t.,** abstention from active measures, while observing the course of the disease and being ready to attack any dangerous symptoms that may arise. **Med′ical t.,** t. by other than purely surgical measures. **Medic′inal t.,** use of drugs, as distinguished from the employment of hygienic and dietetic measures, etc., in the treatment of disease. **Or′gan t.,** opotherapy, organotherapy, the use of organic extracts (thyroid, adrenal, etc.) in therapeutics. **Pal′liative t.,** t. from which a cure is not expected, but only relief of pain and distress or amelioration of the worst symptoms. **Prevent′ive** or **prophylac′tic t.,** prophylaxis. **Se′rum t.,** orrhotherapy, t. by means of the injection of an antitoxin or of a bacteriolytic serum. **Specif′ic t.,** t. by drugs having a special power over the disease in question (as mercury in syphilis, quinine in malaria), or by an antitoxin or bacteriolytic serum. **Support′ing t.,** t. in which the main purpose is to maintain the patient's strength. **Sur′gical t.,** t. by mechanical appliances or the use of the knife. **Symptomat′ic t.,** t. directed to the relief of the symptoms of a disease rather than to the removal of the cause.

**Tree, elk.** Andromeda arborea. **T. of heav′en,** Ailanthus glandulosa. **T. of life,** Thuya occidentalis. **Sour t.,** Andromeda arborea.

**Tree′ak farook′.** Nostrum, used in India for beriberi; a thick extract into which some terebinthinate enters, which is said to slow the pulse and lower blood pressure.

**Tre′foil.** Hepatica triloba. **T. bean,** anagyris. **Marsh t.,** Menyanthes verna. **Shrub′by t.,** Ptelea trifoliata. **Sour t.,** Oxalis acetosella. **T. ten′don,** see *Tendon, trefoil*. **Wa′ter t.,** Menyanthes trifoliata.

**Trefu′sia.** A red powder obtained from desiccation of defibrinated blood, and employed in chlorosis.

**Treha′la.** Cocoons of Larinus maculatus, habitat Asia Minor.

**Tre′halose.** $C_{12}H_{22}O_{11}$. A saccharine substance isomeric with saccharose, produced from Trehala manna and ergot.

**Treitz's fos′sa.** See *Fossa, duodenal*. **T.'s her′nia,** retroperitoneal hernia; duodenojejunal hernia. **T.'s lig′ament,** ridge of peritoneum extending from the duodenojejunal angle to the left crus of the diaphragm. **T.'s mus′cle,** suspensory muscle of the duodenum; it runs from the duodenojejunal angle to the diaphragm, and is continuous with the longitudinal muscular layer of the duodenum.

**Tre′ma** (*trema*, opening). Foramen; vulva.

**Tremato′da** (*trema*, hole). Order of *Entozoa* or endoparasitic worms in man and the lower animals; flukes.

**Trem′atode** or **Trem′atoid.** Relating to one of the trematoda or flukes.

**Trem′bles.** A disease in cattle producing, in the human subject, a typhoid affection known as milk-sickness. Mercurial tremor.

**Trem′bling.** Tremor. **T. fe′ver,** intermittent fever. **Mercu′rial t.,** mercurial palsy. **Se′nile t.,** involuntary but uniform contractions of muscles over a limited space, and succeeding each other with excessive rapidity, occurring in the aged.

**Tremel′la auric′ula Ju′dæ** (*tremo*, to tremble). Peziza auricula.

**Tre′mor** (*tremo*, to tremble). Trembling. Involuntary agitation of the body or of some part of it, without any obstacle to voluntary motion. It depends, generally, upon debility of the muscular or of the nervous system, and hence is observed in convalescence and in typhoid affections. It occurs also in old people, in hard drinkers, and in workers in certain metals, as mercury and lead. Tremor seems to resemble paralysis more than convulsion. **Arsen′ical t.,** involuntary trembling caused by arsenical poisoning or intoxication. **T. ar′tuum,** paralysis agitans. **Contin′uous t.,** t. similar to paralysis agitans. **T. cor′dis,** palpitation. **Fi′brillary t.,** t. produced by contractions of separate fibrillæ, not of the mass of fibres. **Forced t.,** involuntary t. from central lesions after voluntary motion has ceased. **Inten′tion t.,** t. supervening on voluntary movement. **Intermit′tent t.,** t. which is not continuous but is excited by the attempt to execute some movement; intention or volitional t. **T. i′ridis,** hippus. **Lead t.,** t. of lead palsy. **Mercu′rial t.,** t. of mercurial palsy. **T. metal′licus,** t. occurring as a symptom of chronic metallic poisoning, as by mercury or lead. **T. potato′rum,** t. caused by the excessive use of alcoholic beverages. **Purr′ing t.,** a vibration, like the purring of a cat, felt by the hand applied over the precordial region, probably from narrowing of the auriculoventricular openings. **Voli′tional t.,** general t. occurring during voluntary movement; differing from intention t., which affects only the muscles concerned in the movement.

**Trem′ulous.** Trembling. **T. i′ris,** quivering movement of the iris, due to loss of support occasioned by removal or displacement of the lens.

**Trendel′enburg's posi′tion** or **post′ure.** Position made use of by abdominal surgeons, the patient's body being so reclined with the lower extremities elevated that gravitation of the abdominal viscera toward the diaphragm will aid in overcoming some of the difficulties attending such operations.

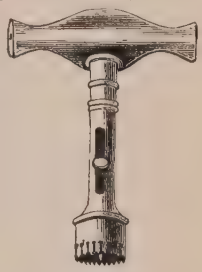
**Trepan′.** Trephine.

**Trepana′tion.** Trepanning.

**Trepan′ning.** Methodical application of the trepan. See *Trephine*.

**Trephina′tion.** Trepanning.

**Trephine′** (*trepo*, to turn). Trepan. An instrument consisting of a simple cylindrical saw, with a handle placed transversely like that of a gimlet; from the centre of the circle described by the teeth of the saw a sharp perforator projects, called the centre-pin, which can be removed at the surgeon's option. It is used to fix the instrument until the teeth of the saw have made a circular groove sufficiently deep for it to work steadily. This instrument is used for removing circular disks of bone.



Trephine.

**Trephi′ning.** Application of a trephine.

**Trepida′tio** (*trepido*, to be agitated). Tremor; rhythmical tremor of the foot in certain diseases. **T. cor′dis,** rapid and feeble palpitation or fluttering of the heart.

**Trepida′tion.** Trepidatio.

**Tre′sis** (*tresis*, boring). Perforation; forcible solution of continuity in a soft part, commencing externally. Trepanning. Wound. **T. cau′sis,** burn. **T. punctu′ra,** puncture. **T. vul′nus,** wound.

**Tresso′ria.** Hair covering the mons Veneris.

**Treves's blood′less fold.** Ileoappendicular fold of the peritoneum.

**Tri-.** In composition, three.

**Triacetin′.** $C_3H_5(C_2H_3O_2)_3$. An oleaginous liquid obtained from cod-liver oil, fats, etc.

**Tri′ad.** A trivalent radical. A syndrome of three elements. **Grancher's′ t.,** see *Grancher*. **Hutch′inson's t.,** see *Hutchinson*.

**Triakaidekapho′bia** (*triakaideka*, thirteen, *phobos*, fear). Excessive dread of the number thirteen.

**Tri′al.** Making a test or experiment. **T. by bier′-right,** an ordeal in which the wounds of a murdered person were supposed to bleed afresh if the body were touched ever so lightly, in any part, by the murderer. **T.-case,** t.-glasses. **T.-frame,** a spectacle-frame used for holding trial-glasses. **T.-glasses,** a collection of lenses used in testing refraction of the eye. **T.-lenses,** lenses used in testing refraction of the eye.

**Triallylam′ine.** $C_9H_{15}N$. A volatile, oleaginous liquid.

**Triam′ide.** See *Amide*.

**Triam′ine.** See *Amine*.

**Tri′angle.** A three-cornered figure formed by three lines meeting at their extremities. A term much employed in topographical anatomy to designate certain regions of more or less triangular shape. **Cardiohepat'ic t.**, see *Cardiohepatic*. **Carot'id t.**, see *Cervical triangles*. **Cephal'ic t.**, t. formed by lines connecting the anterior part of the head and the chin with the posterior parts of the head, and a line uniting the former two. **Digas'tric t.**, submaxillary triangle. **T. of el'bow**, t. on the arm bounded by the supinator longus muscle externally and the pronator teres internally. **Fa'cial t.**, t. made by lines connecting the basion with the alveolar and nasal points and a line joining the latter two points. **Fron'tal t.**, see *Frontal*. **T. of Hes'selbach**, a triangular interval on the posterior aspect of the abdominal wall, through which direct inguinal hernia finds its way, and the sides of which are formed by the epigastric artery and the margin of the rectus muscle, and the base by Poupart's ligament. **Iliofem'oral t.**, see *Ileofemoral*. **Infraclavic'ular t.**, t. bounded by the clavicle, superior border of the pectoralis major muscle, and the anterior edge of the deltoid. **In'guinal t.**, Scarpa's triangle. **Les'ser t.**, see *Cervical triangles*. **Lumbocos'toabdom'inal t.**, t. bounded by the external oblique muscle of the abdomen, serratus posticus inferior, and point of the twelfth rib, and erector spinæ and internal oblique muscle of the abdomen. **T. of neck**, see *Cervical triangles*. **Occip'ital t.**, see *Occipital*. **T. of Petit'**, a triangular space bounded below by the crest of the ilium, in front by the border of the external oblique muscle, and behind by the latissimus dorsi. **T. of Scar'pa**, a triangular depression in the upper part of the thigh, the base of which is formed by Poupart's ligament, the outer side by the tendon of the psoas and iliac muscles and the sartorius, and the inner side by the pectineus and adductor longus. Through the centre of this hollow the femoral artery runs, with the femoral vein internal to it. **Subcla'vian t.**, see *Cervical triangles*. **Submax'illary t.**, see *Cervical triangles*. **Suboccip'ital t.**, t. formed at the back of the neck by the rectus capitis posticus major and the superior and inferior oblique muscles. **Suprameat'al t.**, t. bounded by a portion of the posterior wall of the external auditory meatus, supramastoid crest, and a line drawn from this crest at the level of the postero-inferior wall of the external meatus. **Ves'ical t.**, see *Urinary bladder*.

**Trian'gular.** Having three angles. **T. fas'cia**, triangular ligament of the abdomen. **T. fibrocar'tilage**, triangular plate between the ulna and the bones of the wrist. **T. lig'ament**, infrapubian ligament; a ligamentous fascia situated transversely beneath the symphysis pubis, which it strengthens; also a ligament extending from the coracoid to the acromial process of the scapula. **T. lig'ament of the abdo'men**, band of tendinous fibres arising from Poupart's ligament along the pectineal line, and, passing beneath the spermatic cord, interlacing with its fellow at the linea alba. **T. lig'ament of the ure'thra**, continuation of deep layer of superficial fascia, attached to the under surface of the symphysis pubis and the rami of the ischium and pubis. **T. lig'aments of the liv'er**, layers of peritoneum which unite and extend from the sides of the diaphragm to the margins of the liver. **T. lob'ule**, cuneus. **T. nu'cleus**, cuneate nucleus. **T. ridge**, median ridge descending from the canine cusps of teeth.

**Triangula'ris.** Depressor anguli oris. **T. coccy'gis**, coccygeus. **T. na'si**, compressor naris. **T. ster'ni**, a triangle-shaped muscle, the base being directed downward, situated at the anterior and inner part of the chest behind the cartilages of the ribs. It is attached to the posterior, lateral, and inferior part of the sternum, whence its fibres pass upward and outward, and terminate at the cartilages of the third, fourth, fifth, and sixth true ribs. This muscle depresses the ribs and contributes to expiration.

**Triatom'ic.** A term applied to an element whose valence is equivalent to three atoms of hydrogen.

**Trib'adism.** See *Tribas*.

**Trib'alus** (*tribalos*). Trapa natans.

**Tri'bas** (*tribas*). A woman whose clitoris is so large as to cause her to be regarded as an hermaphrodite; one who produces a sexual orgasm in another woman by friction of the genitals—*tribadism*.

**Triba'sic.** A term applied to an acid having three replaceable atoms of hydrogen.

**Triben'zoyl gal'lic acid.** Acid made by the action of benzoyl chloride on gallic acid; an intestinal astringent.

**Tribra'chius.** Monster having three arms.

**Tribromace'tic-orthoal'dehyde.** Bromal hydrate.

**Tribromal'dehyde.** Liquid substance, very much like chloral, formed by the action of bromine on alcohol. **T. hy'drate**, bromal hydrate.

**Tribroman'ilin hydrobro'mide.** See *Bromamide*.

**Tribromhy'drin.** $C_3H_5Br_3$. Allyl tribromide.

**Tribromometh'ane.** Bromoform.

**Tribromphe'nol.** Bromol. **T. bis'muth**, xeroform; see *Bismuth*.

**Tribromphe'nyl sal'icylate.** Tribromsalol. Salol in which hydrogen is replaced by bromine.

**Tribromsal'ol.** Cardol. Tribromphenyl salicylate. Intestinal antiseptic.

**Trib'ulus aquat'icus** See *Trapa natans*. **T. terres'tris**, a plant of Japan, from the seeds of which an astringent tincture is made; used in orchitis; dose, ♏v–xv (0.32–1.0).

**Tribu'tum luna're** or **men'struum** (lunar or monthly tribute). Menses.

**Trica'go.** Teucrium chamædrys.

**Tricauda'lis** (*cauda*, tail). Retrahens auris.

**Triceph'alus** (*cephale*, head). A monster with three heads.

**Tri'ceps** (*tri*, three, *caput*, head). Name given to muscles having three fleshy bundles at one of their extremities. **T. adduc'tor fem'oris**, under this appellation are comprehended three distinct muscles: adductor brevis, a. longus, and a. magnus; see *Adductor*. **T. aur'is**, retrahens auris. **T. brachia'lis** or **bra'chii**, triceps extensor cubiti. **T. cru'ris**, crural muscle, situated at the anterior, inner, and outer part of the thigh, and formed of three bundles at its superior extremity: 1. A middle fasciculus, the cruralis, crureus, or femoreus; see *Cruralis*. 2. An external fasciculus, the vastus externus. 3. An inner fasciculus, the vastus internus. It is attached above to the anterior, inner, and outer surfaces of the femur, and to the two edges of the linea aspera from the base of the trochanter to within four fingers' breadth of the knee. Below it terminates by a large tendon, which is attached to the base and edges of the patella, as well as to the inner and outer tuberosities of the tibia. The triceps extends the leg on the thigh, and conversely. **T. exten'sor cu'biti**, muscle occupying all the posterior part of the humerus. It arises by three heads: The first or long head—long head of the biceps externus of Douglas, anconeus major of Winslow—arises from the upper margin of the glenoid cavity. The second head, or short head of the biceps externus of Douglas, anconeus externus of Winslow, arises from the base of the great tuberosity. The third head—brachialis externus of Douglas, anconeus internus of Winslow—the shortest of the three, arises from the back part of the os humeri, behind the flat tendon of the latissimus dorsi. These three portions unite about the middle of the arm as one muscle, which is inserted at the upper part of the olecranon. It extends the forearm on the arm, and conversely. **T. mag'nus**, adductor magnus. **T. mi'nor**, adductor longus femoris. **T. re'flex**, involuntary extension of the forearm caused by a sharp tap on the tendon of the triceps brachialis. **T. secun'dus**, adductor brevis. **T. su'ræ**, see *Gastrocnemii*.

**Tri'chæ incubo'rum** or **scrofo'rum.** Plica.

**Trichangeiecta'sia.** Trichangiectasia.

**Trichangiecta'sia** or **Trichangiec'tasis** (*thrix*, hair, *angeion*, vessel, *ektasis*, dilatation). Morbid dilatation of the capillary vessels.

**Trichatro′phia** (*thrix*, hair). Disease of the hair in which it becomes altered in structure, soft and brittle, with atrophy of the hair-bulb.

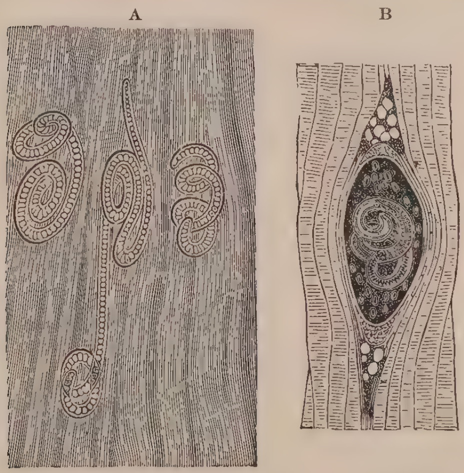
**Trichaux′e** or **Trichaux′is** (*thrix*, hair, *auxe*, increase). Increase in the quantity and size of the hair without change of texture.

**Trichia**, trik′e-ah (*thrix*, hair). Entropion.

**Trichi′asis** (*thrix*, hair). Morbus pilaris. A disease of the kidneys or bladder in which filamentous substances resembling hairs are passed in the urine. Inversion of hairs about an orifice of the body, especially of the eyelashes—trichiasis ciliorum. See *Entropion*. **T. cilio′rum**, see *Trichiasis*. **T. coac′ta**, a matting and interlacing of hair. **T. lac′tea**, knotty swelling of the female mammæ from accumulation and arrest of milk in the galactophorous ducts.

**Trichil′ia emet′ica.** Elcaja. Tree, ord. *Meliaceæ*, common on the mountains of Yemen and in Senegal. The fruit is used by the Arabs as an emetic. **T. trifolia′ta**, a bush of Curaçoa, a decoction of the roots of which is used to promote abortion.

**Trichina**, trik-e′nah (*thrix*, hair). A genus of nematoid worms. **T. san′guinis hom′inis**, Filaria sanguinis hominis. **T. spira′lis**, a species the young of which migrate from the intestine of man and the lower animals, especially swine, and become encysted in the muscles. These are minute, oblong cysts, containing at first a granular substance and afterward calcareous matter. When taken with the food the cysts are dissolved and the worms come to maturity in the intestine; there they multiply, and the embryos then migrate to the muscles. Abdominal pains, diarrhœa, and vomiting, due to perforation of the intestines by newly produced worms, come on within ten days after their ingestion. Secondary symptom relate to the muscles, and resemble myalgia or rheumatism. The condition thus induced has been called trichiniasis, trichinosis, or trichinous disease.



Trichinæ in muscle : A, young worms; B, encapsulated. (Lehrmann.)

**Trichini′asis.** Morbid condition arising as a result of the entrance of trichinæ into the human system. See *Trichina spiralis*.

**Trichiniza′tion.** Infection with trichinæ.

**Trichinize**, trik′in-ize. To induce a trichinous condition.

**Trichinopho′bia** (*phobos*, fear). Morbid dread of trichiniasis.

**Trichinoscope**, trik′in-o-skope. Instrument used in detecting trichinous parasites in affected meat.

**Trichinosis**, trik-in-o′sis. Trichiniasis.

**Trichinous**, trik′in-us. Relating to trichina.

**Trichiosis**, trik-e-o′sis. Trichiasis. **T. dis′trix**, condition in which the hair of the scalp is weak, slender, and split at the extremities.

**Trichismus**, trik-iz′mus. Capilllary fracture, fissure, or crack.

**Trichitis**, trik-e′tis (*thrix*, hair). Inflammation of the bulbs of the hair.

**Trichiuria**, trik-e-u′re-ah (*thrix*, hair, *oura*, tail). Trichocephalus.

**Trichlorace′tic acid.** A compound formed by oxidation of chloral by means of nitric acid.

**Trichloral′dehyde.** Chloral.

**Trichlorcarbol′ic acid.** Trichlorphenol.

**Trichlorhy′drin.** Hypnotic and anæsthetic.

**Trichlo′ride of i′odine.** Decomposed by water into hydrochloric and iodic acids. Used externally.

**Trichlorphe′nic acid** or **Trichlorphe′nol.** Omal. Compound of chlorine and phenol, employed by inhalation in bronchial diseases.

**Tricho-** (*thrix, trichos*, hair). In composition, hair.

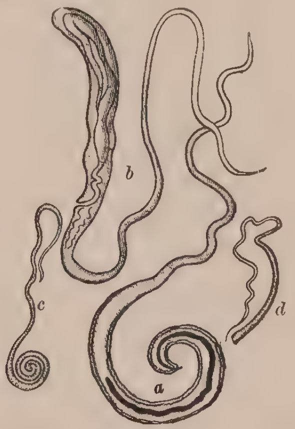
**Trichoæsthesia**, trik-o-es-the′ze-ah (*thrix*, hair, *aisthesis*, sensation). Sensation experienced when hair is touched.

**Trichobacte′ria.** Flagellate or hair-like bacteria.

**Trichocar′dia** (*thrix*, hair, *cardia*, heart). Pseudomembranous elevations occurring in exudative pericarditis, giving rise to the so-called hairy heart.

**Trichocephali′asis.** Infection with the trichocephalus or threadworm.

**Trichoceph′alus** (*kephale*, head). Long threadworm, whipworm. A worm from an inch and a half to two inches long, head acute, the body spirally involuted in the male, almost straight in the female. The *Trichocephalus dispar* or *T. hominis* generally inhabits the cæcum and colon, and is rarely met with in the small intestines; it gives rise to no peculiar symptoms.



Trichocephalus dispar. (v. Jaksch.) *a*, male, *b*, female (slightly magnified); *c*, male, *d*, female (natural size).

**Trichocir′sus** (*trichos*, hair, *kirsos*, a dilated vessel). Trichangiectasia.

**Trichocla′sia** or **Trichocla′sis** (*klasis*, fracture). A breaking of the hair, giving it a jointed appearance.

**Trichocrypto′sis** (*kryptosis*, hiding) Disease of the hair follicles.

**Tri′chocyst.** A hair cell.

**Trichodangii′tis** (*thrix*, hair, *angeion*, vessel). Inflammation of the capillaries.

**Trichodyschroi′a** (*dyschroia*, bad or defective color). Discoloration of the hair; alteration or variation of the natural pigment of the hair.

**Trichoepithelio′ma.** An epithelial tumor seated in the hair follicles.

**Trichogenous**, trik-oj′en-us (*gennao*, to generate). Hair-forming; promoting the growth of the hair.

**Trichoglos′sia** (*thrix*, hair, *glossa*, tongue). Peculiar hairy appearance of the tongue, due to hypertrophy of the sheath of the filiform papillæ.

**Trichoid**, trik′oid. Having the appearance of hair.

**Trichol'abis** or **Tricholab'ium.** Tweezers for extracting hairs.

**Tricholo'gia** (*lego*, to pluck). Carphologia.

**Trichol'ogy** (*thrix*, hair, *logos*, description). Science in relation to the hair. A treatise on the hair.

**Tricho'ma** (*thrix*, hair). Villous or hairy covering. Small fibre or fibril. Plica.

**Trichom'anes** or **T. crena'ta.** Asplenium trichomanoides.

**Trichoma'nia.** Mania for forcibly pulling out the hair. See *Trichotillomania.*

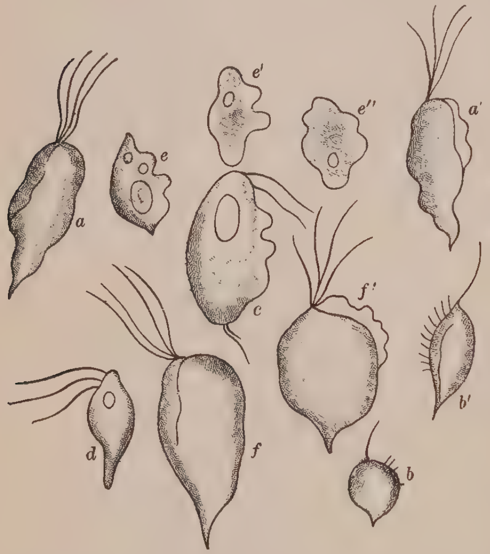
**Tricho'maphyte** (*trichoma*, plica, *phyton*, vegetable). A cryptogamous growth found in plica, and said by some to be its cause; mycoderma plicæ.

**Trichomation,** trik-o-mat'e-on. Capillamentum.

**Tricho'matose.** Relating to trichomatosis.

**Trichomato'sis.** Plica. Any disease due to parasites, in which the hair becomes matted together.

**Trichom'onas,** Trichomonad. A genus of flagellate infusoria, several of which are parasitic in man and other animals. **T. columba'rum,** a form of t. affecting doves, pigeons, and other birds. **T. intestina'lis,** a form of t. found in the small intestines. **T. pulmona'lis,** a form of t. found in the lungs in gangrene of those organs and in fetid bronchitis. **T. vagina'lis,** found in the secretions of the vagina, especially in leucorrhœa.



Trichomonas: *a*, *a'*, *c*, trichomonas of the urine, after Marchand; *f*, *f'*, same, after Dock; *b*, Trichomonas vaginalis, after Donné; *b'*, same, after Scanzoni and Kölliker; *d*, Trichomonas intestinalis, after Piccardi; *e*, *e'*, *e''*, same, amœboid forms.

**Trichomy'ces decal'vans, T. tonsu'rans.** See *Porrigo decalvans.*

**Trichomyco'sis** (*thrix*, hair, *mykes*, fungus). Fungous disease of the hair. **T. capilli'tii,** see *Kerion.* **T. favo'sa,** tinea favosa. **T. palmelli'na,** fungous disease of the hair of the trunk. **T. trichophyti'na,** tinea trichophytina.

**Trichom'ysis nodo'sa.** Disease of the hair of the genitals and axilla characterized by nodosities, due to development within the layers of the shaft of bacteria, which later becomes encapsulated.

**Trichono'sis.** Any disease of the hair. **T. ca'na,** canities. **T. furfura'cea,** porrigo decalvans. **T. pli'ca,** plica. **T. polio'sis,** poliosis. **T. versic'olor,** ringed hair; hair having alternating rings of different shades of color; leucotrichia annularis.

**Trichon'osus** (*tricho*, hair, *nosos*, disease). A disease of the hair.

**Trichopath'ic.** Relating to affections of the hair.

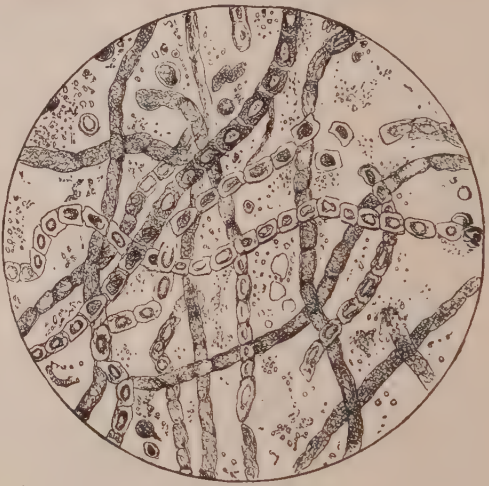
**Trichop'athy.** Any disease of the hair.

**Trichopha'gia** or **Trichoph'agy** (*phago*, to eat). Eating of hair. The habit of biting the hair of the moustache or beard.

**Trichophyt'ic.** Relating to trichophyton.

**Trichophyt'ics** (*phyo*, to grow). Agents promoting the growth of the hair.

**Trichoph'yton** (*phyton*, vegetable). A fungus giving rise to disease of the hair. **T. decal'vans,** see *Porrigo decalvans.* **T. megalos'poron,** a form of fungus, with large spores, producing ordinary trichophytosis. **T. micros'poron,** form of fungus, with small spores, which produces Gruby's disease, a severe variety of trichophytosis in children. **T. ro'dens,** causes alopecia areata in man, rabbits, and mice. **T. sporuloi'des** has been found in ulcers and in plica. **T. tonsu'rans,** fungus causing ringworm.



Filaments and spores of trichophyton from the beard of a man affected with sycosis.

**Trichophyto'sis.** Disease of the skin due to trichophyton. **T. imbrica'ta,** form of tinea in which the scales are imbricated. **T. squamo'sa,** scaly form of tinea. **T. vesiculo'sa,** vesicular form of tinea.

**Trichopolio'sis** (*thrix*, hair, *polios*, hoary). Grayness of hair.

**Trichoptilo'sis.** Falling out of the eyebrows. Trichorrhexis nodosa.

**Trichorrhex'is** (*thrix*, hair, *rhexis*, breaking). Fragility of the hair. **T. nodo'sa,** trichoptilosis; nutritive defect of the scalp giving rise to fragility, swelling, and bursting of the hair; probably parasitic in origin.

**Trichorrhœ'a.** Fall of the hair from any cause.

**Trichosan'thes.** A genus of plants, ord. *Cucurbitaceæ.* **T. ama'ra,** the seeds are bitter and astringent, sometimes emetic, and in larger doses a poison. **T. corda'ta,** the root is used by the natives of India as a substitute for calumba root. **T. cucumer'ina,** the fruit is considered in India to be anthelmintic. **T. inci'sa,** gashed trichosanthes of India; the fruit is poisonous, and used as an application to offensive sores and to ozæna. **T. villo'sa** of Java, the fruit acts like colocynth.

**Trichoschisis,** trik-os'kis-is (*thrix*, hair, *schizo*, to split). Splitting of the hairs at their extremities.

**Tricho'sis.** Morbid organization or deficiency of hair. **T. a'rea,** porrigo decalvans. **T. a'thrix,** alopecia. **T. bul'bi,** small tumor on the anterior part of the eyeball, having hair growing from it. **T. dis'trix,** distrix. **T. entro'pion,** trichiasis. **T. furfura'cea,** porrigo furfurans. **T. hirsu'ties,** hirsuties. **T. pli'ca,** plica. **T. polio'sis,** poliosis. **T. seto'sa,** porcupine disease of the skin; see *Hystriciasis.*

**Trichos'porum beige'lii.** A parasitic microphyte causing disease of the hair.

**Trichosyph′ilis** or **Trichosyphilo′sis.** Syphiloma of the hair. A change in the structure of the hair, the shaft of which becomes swollen and dark colored, drying up and splitting or breaking off—a result of the syphilitic taint.

**Trichothe′cium** (*thrix*, hair, *theke*, place of deposit). A fungus giving rise to disease of the hair. **T. ro′seum,** found at times in the auditory meatus.

**Trichotilloma′nia** (*tillo*, to pluck). Morbid impulse to pluck out the hair observed at times in the insane or the hysterical, or occasionally existing simply as a habit or tic.

**Tricho′ton.** Scalp.

**Trichro′ic** (*chroa*, color). Having three colors when seen under different conditions.

**Trich′roism.** Condition of being trichroic.

**Trichromat′ic.** Trichroic.

**Trichu′ris** (*oura*, a tail). Trichocephalus.

**Tricip′ital.** Relating to the triceps muscle.

**Triclisper′ma grandiflo′ra.** Polygala paucifolia.

**Tricon′odont.** A tooth formed of three basal cones.

**Tri′corn.** Tricornic. A lateral cerebral ventricle.

**Tricor′nic** (*cornu*, horn). Having three horns.

**Tricor′nute.** Having three horns.

**Tricre′sol.** The three cresols of crude carbolic acid—orthocresol, metacresol, and paracresol—form this combination, which is a clear liquid, of creosote-like odor, and is antiseptic, germicide, and disinfectant. Employed in general surgery, in dentistry, in collyria, in diphtheria, etc. **T. phos′phate,** creosote phosphate.

**Tricresolam′ine.** A mixture of equal parts of ethylenediamin and tricresol. Antiseptic and disinfectant.

**Tricrot′ic** or **Tric′rotous.** See *Tricrotism.*

**Tric′rotism** (*kroteo*, to beat). Condition of pulse in which there are three different expansions to a single beat of the pulse. The individual or the pulse is then said to be *tricrotic.*

**Tricus′pid** (*cuspis*, a point). That which has three points. **T. insuffic′iency,** a condition of leakage through the t. valve resulting from endocarditis, obstructive diseases of the lungs by cirrhosis or emphysema, etc., the symptoms being those of obstruction in the pulmonary circulation, with congestion of the veins of the general or systemic circulation. **T. mur′mur,** a murmur heard in disease of the bicuspid valve. **T. tooth,** a tooth having three cusps on the crown. **T. valves,** three triangular valvular duplicatures formed by the inner membrane of the right cavities of the heart around the auriculoventricular orifice. The elongated and pointed top of each of these valves is continuous with the chordæ tendineæ, which set out from the columnæ carneæ of the heart. These valves allow the blood to flow from the auricle into the ventricle, and prevent its reflux into the auricle.

**Tricus′pidate.** Having three cusps.

**Tricus′pis.** Tricuspid.

**Triden′tate.** Having three teeth.

**Tri′dent hand.** A short, square hand, with fingers short, of equal length, and enlarged at the tips.

**Triel′con** (*helko*, to draw or pull). Three-pronged instrument for the extraction of foreign bodies from wounds, etc.

**Trienceph′alus.** A monster wanting three cephalic organs of sense—smell, hearing, and vision.

**Triethylamin′.** $C_6H_{15}N$. Ptomain from some forms of putrefying fish and cultures of a bacillus in poisonous sausage.

**Trifa′cial.** Trigeminal.

**Tri′fid.** Divided into three, as the roots of the upper molar teeth.

**Trifo′lium aceto′sum.** Oxalis acetosella. **T. aquat′icum,** Menyanthes trifoliata. **T. au′reum,** Hepatica triloba. **T. cervi′num,** Eupatorium cannabinum. **T. fibri′num,** Menyanthes trifoliata. **T. hepat′icum,** Hepatica triloba. **T. melilo′tus officina′lis,** common melilot, ord. *Leguminosæ.* The infusion or distilled water of this plant has been employed in ophthalmia. Also used in fomentations, glysters, etc. **T. officina′le,** T. melilotus officinalis. **T. paludo′sum,** Menyanthes trifoliata. **T. palus′tre,** Menyanthes trifoliata. **T. praten′se,** red clover; the flower-heads are diuretic and alterative; given in infusion and fluid extract.

**Trifor′mal** or **Trifor′mol.** $CH_2O_3$. Paraformaldehyde. Antiseptic and astringent. Formalin.

**Trifurca′tion.** Division into three, as the roots of the upper molars.

**Trigas′tric** (*gaster*, belly). Having three bellies, said of muscles.

**Trigem′inal.** Relating to the trigeminus nerve.

**Trigem′inus** (*tri*, three, *geminus*, twin). Trifacial nerve. The fifth pair of nerves. This nerve arises by two roots—a posterior, larger or sensory, and an anterior, smaller or motor root. The larger root arises chiefly from the gray tubercle of Rolando or upper extremity of the posterior gray horn of the medulla; the smaller, motor root arises from two masses of multipolar cells situated on the inner side and close to the gray tubercle. The two roots pass through an opening in the dura mater, and then run between the bone and the dura mater to the opening in the petrous portion of the temporal bone, where the sensory fibres form the Gasserian ganglion; while the motor nerves pass onward, having no connection with this ganglion. The branches of the gemini are the ophthalmic, superior maxillary, and inferior maxillary. The whole of the first and second branches and a part of the third are sensory nerves; while the remaining part of the third—the gustatory or lingual—is entirely motor, and passes to the pterygoid and other muscles concerned in mastication.

**Trig′ger fin′ger.** Name given to a condition in which a joint of a finger suddenly becomes locked, either in flexion or extension. **T. thumb,** a similar condition, but restricted to the thumb.

**Trigo′na cervica′lia.** Cervical triangles.

**Tri′gone.** Trigonum.

**Trigonel′la.** A genus of plants, ord. *Leguminosæ.* **T. fœ′num,** a native of the south of France. The seeds have a strong, disagreeable smell and an unctuous, farinaceous taste, accompanied by a slight bitterness. They are chiefly used in poultices.

**Trigoni′tis.** Inflammation of the trigonum vesicæ.

**Trigonoceph′alus.** One affected with trigonocephaly.

**Trigonoceph′aly.** Peculiarly shaped head, representing a cone with the apex in front.

**Trigon′odont** (*trigonon*, triangle, *odous*, tooth). Term applied to teeth having three angles.

**Trigo′num.** A triangular space. **T. carotide′um,** carotid triangle. **T. cerebra′le,** fornix. **T. cervica′le,** portion of gray commissure of the spinal cord for reception of the blood-vessels. **T. cervica′le infe′rius,** posterior triangle; see *Cervical triangles.* **T. cervica′le supe′rius,** anterior triangle; see *Cervical triangles.* **T. cine′reum,** extension of the gray substance of the floor of the third ventricle connected with the optic chiasm. **T. clavipectora′le,** the triangular space between the clavicle, pectoralis minor, and thoracic wall. **T. collatera′le,** posterior triangle; see *Cervical triangles.* **T. col′li media′num,** the two anterior cervical triangles regarded as one. **T. coracoacromia′le,** triangular space between lines meeting at the apex of the acromion, apex of the coracoid process, and the clavicle. **T. cubita′le,** fossa cubiti. **T. deltoideopectora′le,** infraclavicular fossa. **T. du′rum,** space between the anterior corpora quadrigemina. **T. fluc′tuans,** posterior commissure of the cerebrum. **T. haben′ulæ,** small depression on the back and upper surface of the optic thalamus. **T. hypoglos′si,** hypoglossal area. **T. infe′rius commissu′ræ posterio′ris cer′ebri,** space below the posterior commissure of the cerebrum. **T. infraclavicula′re,** infraclavicular fossa. **T. inguina′le,** Scarpa's triangle. **T. intercrura′le** or **interpeduncula′re,** interpeduncular space. **T. Lieutau′di,** trigone of the bladder. **T. lumba′le infe′rius,** Petit's triangle. **T. lumba′le supe′rius,** tetragonum lumbale. **T. mol′le,** posterior commissure of the cerebrum. **T. olfacto′rium,** olfactory trigone. **T. omoclavicula′re,** subclavian triangle. **T. omotrape′zium,** occipital triangle; see *Cervical triangles.* **T. palati′num,** surface for articulation of the orbital process of the palate-bone at the superior and mesial angle of the superior maxillary. **T. pen′sile,** posterior commissure of the cerebrum. **T. Peti′ti,** Petit's triangle. **T. Scar′pæ** or **subinguina′le,** Scarpa's triangle. **T. submaxilla′re,** submaxillary triangle; see *Cervical triangles.* **T. subpinea′le,** space between the corpora quadrigemina anteriora and the pineal gland. **T. supe′rius commissu′ræ posterio′ris,** space above the posterior commissure of the cerebrum and the anterior corpora quadrigemina. **T. va′gi,** vagus area. **T. vesi′cæ,** triangular space in the floor of the bladder enclosed by lines drawn between the openings of the two ureters and the urethra.

**Triiodocre′sol.** Losophan.

**Triiodometacre′sol.** Losophan.

**Trikre′sol.** Tricresol.

**Tri′labe** (*labium,* lip). Calculus forceps with three prongs. Lithotrite.

**Trilam′inar.** Having three layers. **T. blas′toderm,** an embryo consisting of endoderm, mesoderm, and ectoderm.

**Trilat′eral.** Having three sides.

**Trillat's′ meth′od.** Disinfection by means of formaldehyde evolved from formochloral by heating.

**Trillin′.** Alcoholic extract of Trillium erectum. Tonic, astringent, and expectorant.

**Tril′lium erec′tum.** Indigenous plant; its rhizome is astringent, tonic, and antiseptic in genitourinary affections. **T. latifo′lium,** broadleaf bethroot, bethroot, rattlesnake root, wakerobin, coughroot, Indian balm, ground lily, Jews' harp, Indian shamrock, Pariswort, truelove, ord. *Trilliaceæ;* plant peculiar to North America, whose root is astringent, tonic, and antiseptic; used in genito-urinary affections. All species of trillium possess the same properties.

**Trilo′bate** (*lobus,* a lobe). Trefoil. Having three lobes.

**Triloc′ular** (*loculus,* a small chamber). Having three compartments.

**Trimac′ulated** (*macula,* a spot). Having three spots, as the wings of certain insects.

**Trimam′mius.** Name given to congenital malformation of the breasts in which there are three nipples.

**Trimas′tigate** (*mastix,* a whip). Having three flagella, as certain microorganisms.

**Trimen′sual** or **Trimes′trial.** Term applied to certain diseases or conditions in which symptoms occur every three months.

**Trimethylamin′** or **Trimethyl′ia.** $C_3H_9N$. Volatile alkaline liquid prepared from the same source as propylamin and isomeric with it. Ptomain obtained from putrefactive decomposition of certain bodies, as fish, from ergot, from certain weeds, codliver oil, etc. It has been used in acute articular rheumatism; also as an antipyretic and in gout, and externally in the form of a liniment in chronic rheumatism. The hydrochlorate is the salt employed; dose, gr. iij–x (0.2–0.65).

**Trimethylenediamin′.** $C_3H_{10}N_2$. Poisonous ptomain from culture of the comma bacillus on beef-broth.

**Trimethyleth′ylene.** Pental.

**Trimethylglycin′.** See *Betaïn.*

**Trimethylxan′thin.** Caffeine.

**Trimor′phism** (*morphe,* form). Existence under three separate forms.

**Trineu′ral fascic′ulus.** Solitary bundle of fibres in the upper portion of the spinal cord and medulla oblongata, connected with the roots of the vagus and glossopharyngeal nerves.

**Trini′trin.** Nitroglycerin.

**Trinitrocell′ulose.** Pyroxylin.

**Trinitroglycerin′.** Nitroglycerin.

**Trinitrophen′ic acid.** Picric acid.

**Trinitrophe′nol.** Picric acid.

**Triocepha′lia.** Aprosopia. See *Triencephalus.*

**Trioceph′alus.** Triencephalus.

**Trio′lein.** Olein.

**Tri′onal.** Diethylsulphone methylethylmethane. Allied in composition to sulphonal; hypnotic; dose, ʒss (2.0).

**Trior′chid** (*orchis,* testicle). Having three testicles.

**Trior′chis.** One who has three testicles.

**Triosteosper′mum.** Triosteum.

**Trios′teum.** Bastard ipecacuanha, fever root, feverwort, tinker's weed, horse ginseng or gentian, ipecac, wild coffee, white ginseng, gentian, white gentian, sweet bitter; ord. *Caprifoliaceæ.* Indigenous; cathartic in doses of twenty or thirty grains; sometimes operates as a diuretic, also as an emetic. **T. angustifo′lium** or **T. mi′nus** has similar virtues.

**Trioxyacetophe′none.** Gallacetophenone.

**Trioxybenzophe′none.** Salicyl-resorcin-ketone.

**Trioxymeth′ylene.** Paraformaldehyde.

**Tripalmitin′.** Solid fat, forming an ingredient of olive oil, being in combinaton with oleic acid, of which last olive oil is largely composed.

**Trip′ara** (*pario,* to bring forth). A woman who has borne three children.

**Triphar′macum** (*pharmakon,* medicine). A medicine composed of three ingredients.

**Triphenin′.** Methyl-phenacetin. Propionyl phenetidin. Antipyretic, antineuralgic, hypnotic. Dose, gr. viij–xv (0.5–1.0).

**Triphe′nyl-albu′min.** Procured by heating dry egg albumen with phenol. Nutritive material for the culture of bacilli.

**Tripier's′ amputa′tion.** Modification of subastragaloid amputation of the foot by leaving the upper part of the calcaneum, which is sawn through on a level with the sustentaculum tali and at right angles to the axis of the leg; external incisions are made as in Chopart's amputation.

**Trip′le.** Composed of three ingredients or substances. **T. phos′phate,** phosphate of ammonium, calcium, and magnesium. See *Calculi, urinary.*

**Trip′let** (*triplex,* triple). One of three children born at the same time of the same mother. **T. mon′sters,** such as have parts of the body tripled; a rare condition.

**Trip′lex.** Threefold. **T. pills,** pills having three ingredients, as aloin, strychnine, and cascara.

**Triploblas′tic** (*triplex,* triple, *blastos,* germ). Having three germ-layers. **T. em′bryo,** see *Trilaminar.*

**Triplo′pia** (*triplex,* triple, *ops,* eye). Triple vision.

**Tri′pod** (*pous,* foot). Having three feet. Anything with three supports. **Hal′ler's t.,** cœliac axis. **Vi′tal t.,** the heart, lungs, and brain have been so called, as their united action is necessary for the maintenance of life.

**Trip′olite** or **Trip′olith.** A silicious earth used in fixation dressings, in the same manner as plaster-of-Paris.

**Trip′sis** (rubbing). Contusion; trituration.

**Tri′pus.** Monster having three feet.

**Triquet′rous.** Three-cornered.

**Triquet′rum.** Wormian bone. Cuneiform bone of the carpus.

**Trira′dial** or **Trira′diate.** Radiating in three directions, as *triradiate sulcus,* or the orbital surface of the brain.

**Tris′moid.** Trismus of the newborn, probably caused by pressure on the bones of the head during childbirth.

**Tris′mus** (*trizo,* to gnash). Masticatory spasm, lock-jaw. Spastic closure of the under jaw, a partial tetanus, arising from erethism of the masticatory or motor branch of the fifth pair of nerves. **T. capistra′tus,** adhesions between the gums and cheeks impeding the movements of the jaws. **T. catarrha′lis maxilla′ris,** neuralgia of the jaw. **T. clon′icus,** neuralgia faciei. **T. cyn'icus,** see *Canine laugh.* **T. dias'trophe Sauvages'ii,** Bell's paralysis. **T. dolorif'icus,** neuralgia faciei. **T. maxilla'ris,** neuralgia faciei. **T. nascen'tium** or **T. neonato'rum,** nine-day fits, a form of tetanus attacking infants during the two weeks after birth, due to infection through the navel wound. **T. sardon'icus,** risus sardonicus. **Traumat'ic t.,** the sequence of a wound or injury.

**Trisplanchnia,** tri-splank'ne-ah. Cholera.

**Trisplanch'nic.** Relating to the three cavities—head, chest, and abdomen. **T. nerve,** great sympathetic or ganglionic nerve. Termed trisplanchnic because of its distribution to the organs in the three great splanchnic cavities—the cranium, chest, and abdomen. It is composed of ganglia united by intermediate branches, passing along the side of the spine to the lowest part of the trunk, communicating by a branch with each of the thirty pairs of spinal nerves and several of the cerebral nerves, and detaching nerves from its several ganglia which accompany the arteries and are distributed particularly to the organs of involuntary functions. At its upper part it is concealed in the carotic canal and cavernous sinus, and is joined there by a branch of the sixth pair of nerves and by a twig from the Vidian nerve of the fifth pair. It forms three ganglions in the neck—the superior, middle (thyroid ganglion), and inferior (vertebral ganglion); twelve in the back, the thoracic; five in the loins, the lumbar; and three or four sacral. It unites at the coccyx with its fellow from the opposite side, forming a small ganglion—the coccygeal, ganglion impar, or azygous ganglion. The great sympathetic is a distinct nervous system, supplying the organs of involuntary motion.

**Trisplanchni'tis.** Cholera.

**Trissa'go.** Teucrium chamædrys. **T. palus'tris,** Teucrium scordium.

**Tristearin'.** Ordinary or neutral stearin.

**Trister'nal bone.** Third portion of the sternum, corresponding to the third intercostal space.

**Tristima'nia** (*tristis,* sad + *mania*). Melancholy.

**Tristi'tia** (*tristis,* sad). Despondency; prostration of spirits; melancholy.

**Tritæoph'yes** or **Tritæoph'ya** (*tritæus,* tertian, *phyes,* form). Fever whose type approaches the tertian. **T. america'na,** yellow fever.

**Tritæ'us.** Tertian fever.

**Trithial'dehyde.** Sulphoparaldehyde.

**Triticeoglos'sus.** An aberrant muscle occasionally arising from the cartilago triticea in the lateral thyrohyoid ligaments, and inserted in the side of the tongue.

**Triti'ceous.** Relating to or resembling wheat. **T. nod'ule,** corpus triticeum; cartilago triticea. See *Triticeus.*

**Triti'ceum.** Triticeous nodule. See *Triticeus.*

**Triti'ceus.** Resembling a grain of wheat; hence *cartilago triticea,* nodule in the thyrohyoid ligament.

**Trit'ici fari'na.** Wheat flour. See *Triticum.*

**Triticin'.** Principle derived from triticum, especially T. repens.

**Trit'icum.** A genus of grasses. The official (Ph. U. S.) name of the rhizome of Argopyrum repens, or *Triticum repens,* which see. **T. æsti'vum,** summer wheat. **T. arven'se,** T. repens. **T. cerea'le,** T. æstivum. **T. ceval'los,** T. æstivum. **T. compac'tum,** T. æstivum. **T. erina'ceum,** Triticum æstivum. **T. fa'ginum,** Polygonum fagopyrum. **T. gaertneria'num,** T. æstivum. **T. hyber'num,** winter wheat. **T. linnæa'num,** T. æstivum. **T. mu'ticum,** wheat. **T. pruino'sum,** T. æstivum. **T. re'pens,** dog-grass, couch-grass, twitch-grass; the roots are sweet, and possess aperient and diuretic properties; used in genito-urinary irritation and inflammation. Triticum (Ph. U. S.) is the rhizome of T. repens; diuretic; used in cystitis, pyelitis, and gonorrhœa; dose, ʒij–iv (8.0–16.0) in infusion. The fluid extract, *extrac'tum trit'ici flu'idum,* is official; dose, ʒij–iv (8.0–16.0). **T. sati'vum,** common wheat. **T. sic'ulum,** T. hybernum. **T. spel'ta,** spelt, T. sativum.

**Trit'ol.** Oil emulsified with extract of malt.

**Tri'ton palus'tris.** See *Ectozoa.*

**Tritopine'.** $C_{42}H_{54}N_2O_7$. Alkaloid obtained from opium.

**Trito'rium** (*tero,* to wear away). Infundibulum.

**Tritox'ide.** Trioxide.

**Trituber'cular.** Having three cusps or prominences.

**Trit'urable.** Capable of being triturated.

**Trit'urate** (*trituro,* to thresh). To rub into a powder. Also the powder thus formed, milk-sugar being used as the excipient.

**Tritura'tio.** The official (Ph. U. S.) name for a preparation made by rubbing up an active substance with sugar of milk in the proportion of 1 part of the former to 9 of the latter; see *Trituration.* The only official trituration is **T. elateri'ni,** containing elaterin in the proportion mentioned; dose, gr. $\frac{1}{3}$–$\frac{2}{3}$ (0.021–0.042).

**Tritura'tion** (*tero,* to rub). The act of reducing a substance to powder. Triturations are made as follows: Take one part of the drug to be incorporated into trituration, reduce to moderately fine powder; to this add about equal bulk of sugar of milk, then rub them thoroughly together. Add fresh portions of sugar of milk until nine parts have been used, and continue to triturate until the drug is intimately mixed with the sugar of milk.

**Tri'valent** (*tri,* three, *valeo,* to be worth). Element having an atomicity equivalent to three atoms of hydrogen.

**Tri'valve.** Having three valves. **T. spec'ulum,** an instrument having three blades used for exploration of the vagina and cervix uteri.

**Triven'ter** (*tri,* three, *venter,* belly). Trigastric.

**Tro'car.** An instrument used for evacuating fluids from cavities, particularly in ascites, hydrocele, etc. It consists of a perforator, or stylet, and a cannula so adapted to the perforator that when the puncture is made both enter the wound with facility, after which, the stylet being withdrawn, the cannula remains in the cavity and affords the fluid a ready passage outward. (See cut under *Cannula.*) **Duchenne's' t., Dur'ham's t.,** see these names.

**Troch,** troke (*trochos,* a wheel). Trochiscus.

**Trochanter,** tro-kan'ter (*trochao,* to roll). Anatomists have given the names great and small trochanter to two processes at the upper extremity of the femur. The great trochanter is the one on the outside; the small trochanter is lower down and more internal. Both afford attachment to the rotator muscles of the thigh, and hence their name. Chaussier used the term trochanter for the larger and *trochantin* for the smaller process.

**Trochante'rian.** Relating to the great trochanter.

**Trochanter'ic.** Relating to or near a trochanter.

**Trochan'tin.** See *Trochanter.*

**Trochantin'ian.** Relating to the lesser trochanter.

**Troche,** tro'ke. See *Trochisi* and *Trochiscus.*

**Trochia,** tro'ke-a (*trochia,* the rut of a wheel). Orbit.

**Trochil'ia.** Trochlea.

**Tro'chin,** tro'kin. Trochinus.

**Trochin'ian.** Relating to the smaller tuberosity of the humerus.

**Troch'inus.** The smaller tuberosity of the upper extremity of the humerus.

**Trochis'ci.** Medicated lozenges or troches; see *Trochiscus.* Several of these are official in the Ph. U. S. and Br. **T. ac'idi benzo'ici** (Br.), each containing half a grain of benzoic acid; used for hoarseness as a voice lozenge. **T. a. carbol'ici** (Br.), contain one grain each with balsam of tolu. **T. a. tan'nici** (U. S.), contain about one grain each; (Br.) contain one-half grain each. **T. ammo'nii chlo'ridi** (U. S.), each contains gr. iss (0.1) ammonium chloride and gr. iv (0.26) of extract of licorice. **T. bismu'thi compos'iti** (Br.), contain bismuth carbonate and magnesium carbonate, of each gr. ij (0.13) and calcium carbonate, gr. iv (0.26). **T.**

**cat′echu** (U. S. and Br.), contain each 1 grain (0.65) of catechu. **T. cre′tæ** (U. S.), contain each gr. iv (0.26) prepared chalk. **T. cubeb′æ** (U. S.), contain each oleoresin of cubeb, gr. $\frac{2}{3}$ (0.04). **T. eucalyp′ti gum′mæ** (Br.), contain each gr. j (0.65). **T. fer′ri** (U. S.), contain each hydrated oxide of iron, gr. v (0.32). **T. f. redac′ti** (Br.), contain each gr. j (0.65) reduced iron. **T. glycyrrhi′zæ et o′pii** (U. S.), Wistar's lozenges, contain extract of licorice, gr. $2\frac{1}{3}$ (0.15) and powdered opium, gr. $\frac{1}{12}$ (0.005). **T. guai′aci res′inæ** (Br.), contain each gr. iij (0.2). **T. ipecacuan′hæ** (U. S. and Br.), contain gr. $\frac{1}{3}$ (0.02), or (Br.) gr. $\frac{1}{4}$ (0.016) of ipecac. **T. krame′riæ** (U. S. and Br), contain gr. j (0.65) of extract of krameria. **T. k. et cocaï′næ** (Br.), the same as the preceding with gr. $\frac{1}{20}$ (0.0032) of cocaine. **T. men′thæ piper-i′tæ** (U. S.), contain each ♏$\frac{1}{6}$ (0.01) of oil of peppermint. **T. morphi′næ** (Br.), contain each gr. $\frac{1}{36}$ (0.0018). **T. m. et ipecacuan′hæ** (U. S. and Br.), contain morphine, gr. $\frac{1}{40}$ (0.0016), or (Br.) gr. $\frac{1}{36}$ (0.0018), and ipecac, gr. $\frac{1}{12}$ (0.005); used to allay cough. **T. morphi′næ** (Ph. Br.), morph. hydrochlorat., gr. xx; tinct. tolu, ʒss; sacchar. purificat., ʒxxiv; acaciæ, ʒj; mucilag. acaciæ, q. s.; aquæ destillat., ʒss; divide into 720 lozenges. **T. nitra′tis potas′sii,** nitre troches, contain one part of potassium nitrate to three of sugar. **T. o′pii** (Br.), each lozenge contains gr. $\frac{1}{10}$ (0.0065) extract of licorice and gr. $\frac{1}{10}$ (0.0065) of extract of opium, which, according to the B. P. standard, should represent gr. $\frac{1}{50}$ of morphine. **T. pectora′les,** Jackson's pectoral lozenges; the following formula was proposed by the late Professor Jackson, of the University of Pennsylvania: Ipecac., gr. x; antim. sulphur. præcip., gr. v; morphinæ muriat., gr. vj; acaciæ, sacchar., ext. glycyrrhiz., āā ʒxj; tinct. tolut., ʒiv; ol. sassaf., gtt. iv; to be made with syrup into 200 lozenges, or into lozenges of ten grains each. **T. potas′sii chlora′tis** (U. S. and Br.), the U. S. lozenges containing gr. v (0.32), the Br. gr. iij (0.2) of chlorate of potassium; used in affections of the throat and fauces. **T. santoni′ni** (U. S. and Br.), the U. S. lozenge contains gr. ss (0.032), the Br. gr. j (0.065) of santonin. **T. so′dii bicarbona′tis** (U. S. and Br.), containing each gr. iij (0.2) of sodium bicarbonate. **T. sul′phuris** (Br.), contain each gr. v (0.32). **T. zingib′eris** (U. S.), contain each ♏iij (0.2) of tincture of ginger.

**Trochis′cus.** A troche or lozenge. A solid medicine prepared from powders, incorporated by means of mucilage, crumb of bread, juices of plants, etc.; adapted for the purpose of allowing the medicines of which the troche is composed to pass gradually into the stomach as the lozenge is dissolved in the mouth. See *Trochisci.*

**Trochiter,** trok′it-er. The greater tuberosity at the upper extremity of the os humeri.

**Trochite′rian.** Relating to the trochiter.

**Troch′lea** (*trochao*, to turn). An anatomical pulley. **T. articula′ris,** smooth, grooved surface at the end of a bone over which its articulating fellow glides. **T. astrag′alus,** broad, smooth surface of the astragalus for articulation with the tibia. **T. cartilagin′ea,** cartilaginous portion of the inferior calcaneoscaphoid ligament. **T. of the fe′mur,** continuation of condyles in front, forming a smooth surface at lower end of femur over which the patella glides. **T. humera′lis,** the articular surface at the lower extremity of the os humeri; it forms a kind of pulley on which the ulna moves in flexion and extension of the forearm. **T. labyrin′thi,** cochlea. **T. of supe′rior oblique′ mus′cle,** the cartilaginous pulley over which the tendon of the trochlearis muscle passes at the upper and inner part of the orbit.

**Troch′leæ digito′rum.** Fibrocartilages of the fingers.

**Troch′lear.** Pertaining to a trochlea. **T. fos′sa,** depression in the orbital surface of the frontal bone for attachment of the trochlea of the superior oblique muscle. **T. nerve,** fourth or pathetic nerve. **T. spine,** small tubercle on the orbital surface of the frontal bone, to which the pulley of the superior oblique muscle is occasionally attached. **T. sur′face of hu′merus,** articular surface at the lower end of the humerus, on which the ulna moves.

**Trochlea′ris.** Obliquus superior oculi muscle. Pathetic nerve.

**Trochlea′tor.** Trochlear nerve.

**Trochoceph′alous.** Spherical or rounded appearance of the head, due to partial union of the parietal and frontal bones by osseous material.

**Trochogin′glymus.** A combined pivot and hinge joint.

**Trochoid,** tro′koid (*trochos*, a wheel, *eidos*, resemblance). An articulation in which one bone turns upon another like a wheel upon its axle, as the atloidoaxoid articulation.

**Trochoi′des.** Pivot-joint.

**Troisier's′ gan′glion.** Enlargement of the lymph glands of the region above the left clavicle, a sign of malignant disease in the interior of the abdomen. **T.'s sign,** T.'s ganglion.

**Trolard's′ vein.** Anastomotic vein, between the superior longitudinal sinus and the superior petrosal or cavernous sinus.

**Troll′ius lax′us.** Globeflower, ord. *Ranunculaceæ;* indigenous; has the same medicinal properties as the ranunculus.

**Tröltsch's cor′puscles.** Corpuscles imbedded between the fibres of the two layers making up the middle fibrous layer of the membrana tympani, analogous to the corpuscles of the cornea. **T.'s spaces,** two small pouches in the attic of the middle ear formed by mucous folds.

**Trom′mer's test.** A test for grape-sugar. To the liquid to be tested add one-third of its volume of liquor potassæ and a few drops of 10 per cent. cupric sulphate solution; boil, and, if glucose be present, a reddish-yellow turbidity appears, due to precipitation of cuprous oxide.

**Tromoma′nia** (*tromos*, tremor) or **Tromoparanœ′a** (*paranoia*, mental delusion). Delirium tremens.

**Trompatil′a.** Parts of the Mexican tree Bouvardia triphylla, used in hydrophobia.

**Tro′mus** (*tromos*, tremor). Paralysis agitans. Tremor.

**Tro′na.** Native sesquicarbonate of sodium, of Egyptian or North African origin.

**Tropacocaïne′.** Benzoylpseudotropeine. An alkaloid found in the leaves of Java coca, but produced also by synthesis. It is in white, soluble crystals, and is a local anæsthetic. The hydrochloride is the preparation employed.

**Tropæolin′.** Coal-tar derivative, of deep yellow color, used as a dye and as a test for free acid in the stomach.

**Tropæ′olum ma′jus.** Indian cress, ord. *Geraniaceæ.* An antiscorbutic. **T. tubero′sum,** ulluco, a tuberous plant, smaller than the potato, cultivated in the Sierras, Peru.

**Tro′pates.** Salts of tropic acid.

**Tropeins′.** Chemical compounds formed by the replacement of a tropic acid molecule by a molecule of another acid.

**Troph′alis** (*trophe*, nourishment). Colostrum.

**Tro′phe.** Aliment; pabulum; nourishment.

**Trophe′sial** or **Trophe′sic.** Relating to trophesy.

**Troph′esy.** Condition due to trophic nerve disorder.

**Tro′phi** (*trophe*, nourishment). Parts of the mouth in insects employed in receiving and preparing the food.

**Troph′ic** (*trophe*, nourishment). Relating to nourishment or nutrition. **T. cen′tres,** those giving rise to trophic nerves or regulating the nutrition of nerves. **T. fi′bres,** nerve-fibres supposed to regulate nutrition of the area to which they are distributed. **T. nerves,** motor spinal nerves; the organic nerves of the sympathetic system, from the belief that they are concerned in nutrition. **T. neuro′ses,**

diseases supposed to be due to derangement of the trophic nerves.

**Troph′oblast.** Epiblast outside of the germinal area.

**Trophol′ogy.** Science of nutrition.

**Trophoneuro′sis** (*trophe*, nourishment). Local disturbance of nutrition owing to modified trophic action of the nerve supply to the part.

**Trophoneurot′ic.** Relating to a trophoneurosis.

**Trophon′osus** (*trophe*, nourishment, *nosos*, disease). Diseases of nutrition.

**Trophopathy,** trof-op′ath-e. Disease of nutrition.

**Troph′oplasm.** Achromatic portion of a cell.

**Troph′oplast.** An aggregation of formative plasma.

**Trophot′onos** (*tonos*, tension). Tension or rigidity of the flagella of a microbe.

**Trophot′ropism.** Disposition shown by organic cells to attract or repel certain nutrient liquids.

**Tro′pic acid.** Derivative of atropine, formed by boiling with hydrochloric acid or with baryta-water.

**Trop′ical.** Belonging to or occurring in the tropics. **T. ab′scess,** abscess of the liver resulting from dysentery. **T. aph′thæ,** psilosis. **T. chloro′sis,** ankylostomiasis. **T. li′chen,** prickly heat. **T. phagedæ′na,** acute infectious ulcerative disease of Tonkin and other tropical regions, of microbic origin presumably; the disease, if not healed, may assume the form of a chronic atonic ulcer.

**Tropidine′.** Product of decomposition of atropine by hydrochloric acid.

**Tropine′.** Strong, crystallizable mono-acid base formed by decomposition of atropine with hydrochloric acid or with baryta-water. **T. tro′pate,** atropine, less one molecule of water.

**Tropom′eter** (*tropos*, turning). Instrument to measure the power of rotation of the eye.

**Tro′pon.** Brownish powder, made from albumin derived from vegetable and animal sources; it is about 80 to 90 per cent. pure albumin, and is employed as a nutritive agent both in health and in disease.

**Tropon′osus** (*trope*, solstice). Any tropical disease.

**Trousseau′s** (troo-soze′) **apoph′ysary points.** Sensitive points discovered by pressure made over the spine in certain cases of neuralgia. **T.′s disease′,** stomachal vertigo. **T.′s marks,** T.′s spots. **T.′s phenom′enon,** T.′s sign. **T.′s rose′ola,** German measles, rötheln, or rubella. **T.′s sign** or **symp′tom,** paroxysm artificially produced in tetanus by pressure upon the larger arteries and nerves of the arm. **T.′s spots,** red spots appearing upon the skin after slight mechanical irritation; tache cérébrale.

**Trubs.** Lycoperdon tuber.

**True.** Functionally perfect, having reference to organs or tissues. **T. car′tilage,** hyaline cartilage. **T. cor′pus lu′teum,** corpus luteum of pregnancy. **T. lig′aments of blad′der,** two lateral, two anterior ligaments, and remains of urachus acting as a ligament. **T. mo′lar teeth,** twelve largest teeth of the permanent set. **T. pel′vis,** part of the pelvic cavity situated beneath the iliopectineal line. **T. pep′tone,** tryptone. **T. ribs,** those connected with the sternum. **T. skin,** corium. **T. su′ture,** one articulating by dovetails. **T. ver′tebræ,** those having individual motion, and not welded together as in the sacrum and coccyx. **T. vo′cal cords,** those concerned in the production of voice.

**True′love.** Paris; Trillium latifolium.

**Tru′ffle.** Lycoperdon tuber. **Hart′s t.,** Elaphomyces granulatus.

**Trum′pet creep′er.** Tecoma radicans. **T. flow′er,** T. radicans. **T. hon′eysuckle,** Lonicera sempervirens. **T. leaf,** Sarracenia flava. **T. weed,** Eupatorium purpureum.

**Trun′cal.** Relating to the trunk of a body, as *t. muscles*, the muscles of the trunk.

**Trun′cated.** Deprived of limbs.

**Trun′cus.** Trunk. **T. arterio′sus,** arterial trunk in association with the fetal heart.

**Trunec′ek′s se′rum.** An artificial serum for treating arteriosclerosis, and diseases due to high arterial tension; contains sodium phosphate 0.15, sodium carbonate 0.21, sodium sulphate 0.44, sodium chloride 4.92, and potassium sulphate 0.40 in distilled water 100; it is employed subcutaneously in doses of ♏xv (1.0) gradually increased.

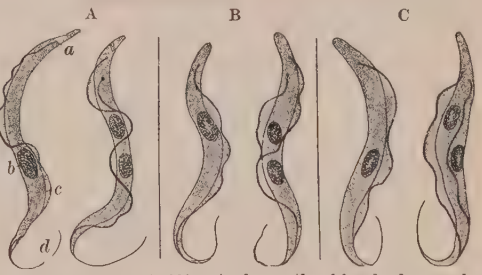
**Trunk.** The principal part of the body, to which the limbs are articulated. The trunk of an artery, vein, nerve, or lymphatic is its largest part, which has not yet given off branches. Also applied to the parent vessel after branches have been sent off.

**Truss.** Instrument or bandage for keeping hernia reduced. A good truss should make equable and continuous pressure on the aperture of the sac, and yield to the change of form in the abdominal parietes. **Frame t.,** one in which the pad is attached to a spring steel band encircling the body, countersupport being made against the lumbar region. **Hank t.,** t. extemporized from a skein of wool attached to a belt; affords a slight support without pressure, and is used especially in infantile hernia. **Hood t.,** frame t. **Na′sal t.,** apparatus like a truss for keeping fractured nasal bones in apposition. **Op′posite-side t.,** t. with a pad attached to the extremity of a steel band which passes across the abdomen. **Same-side t.,** t. with a pad attached to the extremity of a steel band which does not cross the abdomen, but is curved around from the back on the same side as the hernia.

**Tryp′anon.** Trephine.

**Trypanoplas′ma.** A genus of *Protozoa*, family *Trypanosomidæ;* distinguished from the genus *Trypanosoma* by having two flagella, one at each extremity; found in leeches and other organisms of a low order.

**Trypanoso′ma** (*trypanon*, gimlet, *soma*, body). A genus of *Protozoa*, class *Mastigophora*, ord. *Monadidæ;* possesses one flagellum. **T. bru′cii,** the specific cause of tsetse disease. **T. castella′nii,** a species found by Castellani in the cerebrospinal fluid in cases of African sleeping sickness. **T. equiper′dum,** the organism causative of dourine. **T. equi′num,** the protozoon of mal de caderas. **T. ev′ansi,** the microorganism of surra. **T. gambien′se,** a species found by Dutton in the blood of man, possibly identical with T. castellanii. **T. lew′isi,** a blood parasite of rats.



Trypanosoma, × 2000: A, from the blood of a mule with surra; B, from a horse with nagana; C, from a horse with mal de caderas; *a*, centrosome; *b*, nucleus; *c*, undulating membrane; *d*, flagellum; the right-hand figure in each pair represents the parasite in process of division. (Laveran.)

**Trypanosomi′asis.** The presence of trypanosoma parasites in the blood.

**Trype′sis** (*trypao*, to bore). Trephining.

**Tryp′sin.** Ferment of pancreatic juice acting upon proteids and converting them into peptone and other substances.

**Trypsin′ogen.** Substance in the pancreas, the splitting up of which results in the formation of trypsin.

**Tryp′sis.** Friction.

**Tryp′tic.** Pertaining to trypsin.

**Tryptonæ′mia.** The presence of tryptone in the blood; a similar condition to peptonæmia.

**Tryp′tone.** Substance produced by the action of trypsin upon proteids.

**Tryp′tophane.** A product of the digestion of hemipeptone with trypsin.

**Tsaraäth.** True leprosy, so called by the Jews.

**Tsa-tsin.** Rhynchosia excavata.

**Tset′se.** Glossina morsitans. **T. disease′** or **T.-fly disease′,** nagana; a disease, analogous to malaria and to Texas fever, occurring in South Africa. It is due to the presence of a flagellate protozoön in the blood, Trypanosoma brucii, which enters the body by means of the sting of the tsetse-fly. It occurs under three forms: *acute,* in the mouse, rat, dog, and monkey; *subacute,* in the rabbit, guinea-pig, horse, ass, and pig; *chronic,* in the bovidæ, sheep, and goat; man is probably immune. The chief symptoms are fever, œdema, and anæmia, which vary in intensity and individual preponderance in different animals.

**T-shaped bron′chi.** Bronchi bifurcating at nearly right angles to the bronchus from which they arise.

**Tsit′la.** South African root of the *Araceæ* family, containing a large quantity of sweet starch.

**Tsu′ga.** A coniferous tree, from one variety of which *T. canadensis,* Canada pitch, is procured.

**Tu′ba** (a trumpet). Tube. **T. acus′tica,** Eustachian tube. **T. aristotel′ica,** Eustachian tube. **T. cæ′ca,** Fallopian tube. **T. Eusta′chii,** Eustachian tube. **T. fallopia′na** or **uteri′na,** Fallopian tube. **T. voca′lis,** vocal tube.

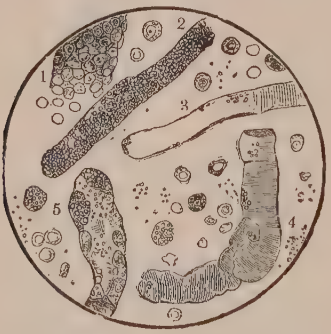
**Tu′bage.** See *Catheterismus.*

**Tu′bal.** Relating to a tube or tubes, and especially to the Fallopian tube. **T. drop′sy,** salpingian or Fallopian dropsy. **T. nephri′tis,** Bright's disease of the kidney. **T. preg′nancy,** see *Pregnancy, tubal.* **T. respira′tion,** see *Murmur, respiratory.* **T. wall,** anterior wall of the tympanum, including the Eustachian tube.

**Tub′bing.** The use of the cold bath in fevers.

**Tub′boe.** Form of frambœsia or yaws attacking the feet.

**Tube.** Name given to parts or canals which are hollow, having at times the shape of a trumpet. **Alimen′tary t.,** the canal leading from the fauces to the anus. **Aud′itory t.,** see *Auditory canal.* **Boch′dalek's t., Bouchut's′ t., Crookes's t., Geiss′ler's t., O'Dwy′er's t.,** etc., see the proper names. **T. casts,** microscopic casts or moulds of uriniferous tubes of the kidney, observed in diseases of those organs. *Blood t. c.,* those having blood corpuscles entangled in coagulated fibrin. *Epithe′lial t. c.,* those having epithelium entangled in albuminoid exudate. *Fat′ty t. c.,* oily tube casts. *Gran′ular t. c.,* those composed of granular débris of degenerated epithelium or blood cells. *Hy′aline t. c.,* structureless, transparent, gelatinous moulds probably formed of coagulated fibrin. *Mu′cous t. c.,* moulds of uriniferous tubule composed of mucus; not indicative of organic disease of the kidney. *Oil′y or fat′ty t. c.,* those loaded with oil drops, either free or in epithelial cells. *Wax′y t. c.,* hyaline casts resembling molten wax. **T. of the coch′lea,** see *Scalæ of the cochlea.* **Cor′neal t.,** one of the interlamellar spaces between the several layers of the cornea; called also Bowman's t.; these spaces are believed to be artefacts. **T. cul′ture,** test-tube culture. **Drain′age t.,** glass or rubber tube introduced into wounds for the purpose of giving exit to the secretions. *Decal′cified drainage t.,* shaft of a small bone having the bone salts removed, used as a drainage tube. **Enterot′omy t.,** tube employed to prevent prolapse of the intestine after colotomy. **Eusta′chian t.,** see *Eustachian.* **Fallo′pian t.,** oviduct, uterine tube, vector canal; a canal lined with columnar ciliated epithelium situated in the free margin of the broad ligament, extending from each superior angle of the uterus to the sides of the brim of the pelvis. Each tube is four or five inches in length; its canal is very minute, hardly admitting a fine bristle; near the uterus it is straight and very narrow, but in its course, widening, becomes tortuous, and terminates by a free expanded and fimbriated extremity. One of the fimbriæ is connected with the outer end of the ovary. These tubes establish a communication between the cavity of the peritoneum and that of the uterus, the abdominal termination being called *ostium abdominale, internum,* or *oäricum;* the uterine, *ostium uterinum, apertura uterina.* When the tube embraces the ovary a funnel-shaped cavity—*càrolla infundibuliformis*—is formed at its extremity, into which the ovule passes and is transmitted to the uterus. **Hard t.,** a Crookes t. with high vacuum, producing *x*-rays of great intensity and penetrating power. **Intes′tinal t.,** alimentary canal. **Intuba′tion t.,** tube introduced into the larynx during the operation of intubation. **Lithot′omy t.,** perineal t. **Œsophag′eal t.,** stomach t., a long elastic gum tube, capable of being passed into the œsophagus or stomach. **Otopharyn′geal t.,** Eustachian tube. **Perine′al t.,** tube introduced, for the purpose of drainage, through the wound into the bladder after perineal section. **Pol′len t.,** see *Pollen.* **Rec′tal t.,** defecation tube, an elastic gum tube, similar to the stomach tube, which is sometimes passed into the colon, to remove air from that intestine or to enable enemata to be thrown up into it. **Soft t.,** a Crookes t. with low vacuum, producing *x*-rays of weak penetrating power. **Stom′ach t.,** see *Tube, œsophageal.* **Test t.,** see *Test.* **Tra′cheal t.,** tube which is inserted into the trachea after tracheotomy, usually consisting of a cannula within a cannula, the inner of which may be removed and cleansed, while the outer remains in position. **U′terine t.,** Fallopian t. **Vo′cal t.,** the part of the air-passages above the inferior ligaments of the larynx, including the passages through the nose and mouth.



Tube casts: 1, blood cast; 2, granular cast; 3, hyaline cast; 4, waxy cast; 5, epithelial cast.

**Tu′ber** (a bump or protuberance). Hump; tubercle. Fleshy stem or root-stock, usually containing starchy matter. **T. annula′re,** pons Varolii. **T. atlo′ido-occipita′le,** rectus capitis posticus minor. **T. cal′cis,** the posterior extremity of the os calcis. **T. cervi′num,** Elaphomyces granulatus. **T. ciba′rium,** Lycoperdon tuber. **T. cine′reum,** a grayish tubercle, seen at the base of the brain behind the commissure of the optic nerves, which is continuous with the infundibulum. **T. coch′leæ,** promontory of the tympanum. **T. cor′poris callo′si,** see *Corpus callosum.* **T. dorsa′le,** t. posticum. **T. fronta′le,** frontal protuberance. **T. guloso′rum,** Lycoperdon tuber. **T. gutturo′sum,** bronchocele. **T. ischiad′icum,** tuberosity of the ilium. **T. is′chii,** see *Ischiatic.* **T. ischiotrochante′rium,** quadratus femoris. **T. maxil′læ,** tuberosity of the superior maxillary bone. **T. ni′grum,** Lycoperdon tuber. **T. olfacto′rium,** olfactory tubercle. **T. omenta′le hep′atis,** tubercle on the superior border of the lobe of the liver opposite the upper curvature of the stomach. **T. omenta′le pancrea′tis,** prominence on the pancreas corresponding to the lesser omentum. **T. parieta′le,** see *Parietal bones.* **T. pell′agræ,** pellagra. **T. posti′cum,** posterior segment of the vermis inferior. **T. tym′pani,** promontory of the tympanum. **T. val′vulæ,** short commissure.

**Tu′bera ter′ræ.** Lycoperdon tuber.

**Tu′bercle.** Tumor in the substance of organs or in the skin, rounded and of small size, somewhat larger than a papule. A small prominence or projection from the surface of bone, smaller than a tuberosity. A small, rounded elevation upon a tooth crown. In pathological anatomy the term is generally given to well-defined, roundish, non-vascular nodules which may reach the size of millet-seed, presenting at the periphery numbers of round cells like leucocytes, nearer the centre larger cells often called epithelioidal cells, and in more central parts one or more giant cells having numerous nuclei; the central part may appear opaque, due to caseous necrosis. In and about the giant cells are seen tubercle bacilli in greater or less abundance, and it is to their presence in the tissues that the formation of tubercles is due. The presence of these bodies in a tissue constitutes the condition of *tuberculosis*. Tubercles may occur symmetrically in diverse organs as minute, globular bodies, giving rise to a condition called *miliary tuberculosis*, or as larger, unsymmetrical lesions known as *local tuberculosis*. There is usually a tendency to apposition of tubercles, with formation of larger nodules, which finally undergo cheesy necrosis; the lesion is then known as yellow or crude tubercle in contradistinction to gray tubercle, which it is first called. Yellow tubercles tend to undergo liquefaction necrosis, and if possible to be discharged; if on external parts, an ulcer may be formed; if in the lungs, a cavity results. Occasionally connective tissue is formed in these tubercles which holds cheesy material in its meshes. This is called fibrous tubercle. The word tubercle is also employed rather loosely to denote the condition characterized by the presence of tubercles—tuberculosis. See also *Tubercula* and *Tuberculum*. **Acous′tic t.**, projection on the floor of the fourth ventricle of the brain. **Adduc′tor t.**, termination of the inner supracondylar line of the femur. **Amyg′daloid t.**, t. on the roof of the descending cornu of the lateral ventricle. **Anatom′ical t.**, verruca necrogenica. **T. of Aran′tius**, see *Tubercula*. **T. of the are′ola**, see *Mamma*. **T. bacil′lus**, see *Bacillus*. **Black t.**, melanosis. **Can′cerous t. of the face**, lupus. **Carot′id t.**, anterior tubercle of the sixth vertebra. **Chassaignac's′ t.**, anterior tubercle of the sixth vertebra. **T. of clav′icle**, conoid tubercle; rough eminence surmounting the coracoid process of the scapula and giving attachment to the conoid ligament. **Co′noid t.**, tuberosity on the posterior border of the clavicle; see *T. of clavicle*. **Creta′ceous t.**, see *Cretaceous*. **Crude t.**, yellow form of tubercle, with a tendency to caseous degeneration. **T. of cu′boid**, eminence with a convex facet for articulation with the sesamoid bone in the tendon of the peroneus longus. **Darwin′ian t.**, see *Darwinian*. **Del′toid t.**, rough surface on the anterior portion of the clavicle. **Dissec′tion t.**, verruca necrogenica. **Farre's t.**, see *Farre*. **T. of fe′mur**, prominence projecting from the upper and front part of the neck of the femur at its junction with the great trochanter. **Fi′brous t.**, one with connective tissue in it. **Ge′nial t.**, see *Genial*. **Gen′ital t.**, see *Genital*. **Ger′dy's t.**, see *Gerdy*. **Gray t.**, infectious neoplasm of gray round cells, surrounded by a circle of proliferating tissue. **Gray t. of Rolan′do**, see *Tubercle of Rolando*. **Infragle′noid t.**, rough ridge beneath the glenoid fossa of the scapula. **Lac′rymal t.**, rough surface on the superior maxillary bone. **Lam′inated t. of cerebel′lum**, nodule at the anterior pointed termination of the inferior vermiform process. **Lisfranc's′ t.**, scalene t. **T. of Low′er**, see *Lower, tubercle of*. **Mam′millary t.**, see *Mammillary eminence*. **Mas′toid t.**, mastoid process. **Men′tal t.**, rough surface on the body of the lower jaw. **Mil′iary t.**, gray t. **Montgom′ery's t.**, see *Mamma* (tubercles of the areola). **Morgagn′i's t.**, mammillary t., olfactory bulb. **Mu′cous t.**, see *Condyloma*. **Ob′turator t.**, one of two tubercles, inferior and superior, limiting the obturator groove of the pubic bone. **Olfac′tory t.**, olfactory bulb. **Op′tic t.**, quadrigemina tubercula. **Pain′ful subcuta′neous t.**, see *Neuroma*. **Pearl′y t.**, small collections of sebaceous matter in the thin skin of the lower eyelid, often attaining considerable size. **Pharyn′geal t.**, rough surface on the basilar process of the occipital bone for attachment of the superior constrictor muscle of the pharynx. **Poste′rior t.**, vertebral t. **Post-mor′tem t.**, anatomical t. **Pter′ygoid t.**, tubercle situated to the inner side of and below the Vidian canal on the sphenoid bone. **T. of the quadra′tus**, rough surface on the great trochanter of the femur for attachment of the quadratus muscle. **Rab′ic t.**, a collection of round or oval cells about the nerve-cells in rabies. **T. of the ra′dius**, rough surface for the extensor secundi internodii pollicis. **Resorp′tion t.**, miliary t. forming in lymph passages in the immediate vicinity of another miliary tubercle. **T. of rib**, eminence on the posterior surface of the rib at the junction of the neck with the shaft. **T. of Rolan′do**, tubercle formed by the blending of the lateral crescentic portions of the gray matter of the medulla oblongata with the fibres of the corpora restiformia. **Scalene′ t.**, rough impression on the first rib for the scalenus anticus muscle. **T. of scaph′oid of car′pus**, eminence giving attachment to the anterior annular ligament of the wrist. **T. of scaph′oid of tar′sus**, eminence giving attachment to part of tibialis posticus. **Seba′ceous t.**, pearly t. **Supragle′noid t.**, tubercle situated above the glenoid cavity of the scapula, for attachment of the long head of the biceps. **T. of tib′ia**, oblong elevation on the anterior surfaces of the tuberosity of the tibia. **T. of ul′na**, prominence on the coronoid process of the ulna giving attachment to the oblique ligament. **Ver′tebral t.**, see *Mammillary processes*. **Yel′low t.**, mass of caseous substance considered as a later stage of gray or miliary tubercle. **T. of zygo′ma**, projection on the anterior root giving attachment to the external lateral ligament of the jaw.

**Tuber′cula** (pl. of tuberculum) **Aran′tii.** Tubercles of Arantius or Aranzi; small eminences at the middle part of the convex edges of the semilunar valves of the pulmonary artery and aorta. **T. are′olæ**, see *Mamma*. **T. arthrit′ica**, arthritic calculi. **T. cer′ebri**, tubercles of the brain. **T. dolo-ro′sa**, small, subcutaneous painful tumors on the nerves of the skin, chiefly about the joints; see *Neuroma*. **T. gonorrho′ica**, gonorrhœa. **T. gum′mata**, see *Gumma*. **T. hep′atis**, tubercles of the liver. **T. intestino′rum**, tubercles of the intestines **T. mammilla′ria**, see *Mammillary eminence*. **T milia′ria**, milium. **T. nervo′rum nodo′sa**, nervou ganglions. **T. par′va du′ræ ma′tris**, glandulæ Pacchioni. **T. peritonæ′i**, tubercles of the peritoneum **T. pulmo′num**, see *Phthisis pulmonalis*. **T. quadrigem′ina**, quadrigemina tubercula. **T. seba′cea**, milium.

**Tuber′cular.** Tuberculate, tuberculated, nodulated. Relating to a tubercle or nodule; characterized by the presence of nodules. Sometimes employed as synonymous with tuberculous. **T. disease′ of the foot**, fungous foot. **T. lep′rosy**, that form of leprosy characterized by the formation of nodules or tubercles in the skin. **T. liv′er**, cirrhosis of the liver. **T. sarco′ma**, see *Tuberculate*.

**Tuber′culate.** Tubercular, nodular. **T. sarco′ma of Ab′ernethy**, a growth characterized by the presence of firm, round, and clustering nodules or tubercles, pea-sized, yellowish, or brownish-red; when large they are disposed to ulcerate and produce a painful, malignant, and often fatal sore; found chiefly in the lymphatic glands of the neck; often simultaneously in other glands and organs.

**Tuber′culated.** Tubercular. **T. liv′er**, cirrhosis.

**Tuber′culide.** A cutaneous lesion of tuberculous nature.

**Tuberculin′.** Koch's lymph. Yellowish liquid, glycerin extract of the cultures of the tubercle bacillus, used in the diagnosis of tuberculosis and as a remedy for tuberculosis of the lungs, joints, etc. There are several preparations called tuberculin: **Old t.**, or **T. A.**, is that above described as originally made. **T. O.** (*obere* or *upper t.*) and **T. R.** (*t. rest*, or *residual t.*) are prepared by drying and pulverizing pure cultures of the tubercle bacillus and then oxidizing; the product separates into two layers, the upper of which is T. O., the lower (after further oxidation), T. R.

**Tuberculinose′.** Modified form of tuberculin.

**Tuberculi′num.** Tuberculin.

**Tuberculi′tis.** Inflammation of tubercles.

**Tuberculiza′tion.** Formation of tubercles. Rendering the organism immune against tuberculosis by repeated injections of tuberculin.

**Tuber′culize.** To become tuberculous.

**Tuber′culocele.** Tuberculous disease of the testicle.

**Tuberculocidin′.** Proposed by Klebs as a substitute for tuberculin, being a preparation of the albumose, which he considers the active material in tuberculin.

**Tuberculoder′ma.** Tuberculous disease of the skin.

**Tuberculofi′broid.** Having fibroid tubercles.

**Tuberculo′ma.** Tuberculate tumor. Also neoplasm caused by the action of the Bacillus tuberculosis.

**Tuberculo′sis.** Disease caused by the growth and development of the tubercle bacillus. It is characterized usually by the presence of the peculiar formations called tubercles. It may affect any organ or tissue in the body, but is particularly prone to attack the lungs in adults, the intestines and mesenteric glands in children; the bones and joints are also frequent seats of tuberculous disease, especially in children. **Acute′ t.**, hasty or galloping consumption; also miliary t. **T. aspergilli′na**, condition like general tuberculosis caused by a species of aspergillus transmitted from pigeons; pneumonoconiosis aspergillina; see *Aspergillus*. **A′vian t.**, t. of birds, especially barnyard fowls. **Bo′vine t.**, t. of horned cattle. **Cesto′dian t.**, disease of cattle caused by cysticerci. **T. cu′tis**, condition of the skin in which numerous lesions, characterized by inflammatory, plastic, or retrogressive changes in the skin and subcutaneous tissues, occur, due to infection by the bacillus of tuberculosis or its toxins. **T. c. exanthemat′ica**, condition of indolent multiple lesions following the exanthematous fevers of children. **T. c. orificia′lis**, characterized by indolent, shallow, discrete granulating ulcers occurring about the mucous orifices of patients with pulmonary tuberculosis. **T. c. serpigino′sa ulcerati′va**, characterized by degeneration of nodules into a centrifugally spreading ulcer; resembles serpiginous syphiloderm. **Dissem′inated t.**, see *Disseminated*. **T. fungo′sa cu′tis**, characterized by tumors like those occurring in mycosis fungoides, secondarily affected with tubercle bacilli from other organs. **T. laryn′gis et tra′cheæ**, phthisis laryngea. **Mil′iary t.**, acute generalized t., characterized by the presence of numerous minute tubercles in many of the organs and tissues. **T. papilloma′tosa cu′tis**, characterized by exuberant, soft, and florid excrescences, closely packed, with fissures between. **Pul′monary t.**, t. of the lungs. **T. suppurati′va et bullo′sa acu′ta**, pustular scrofuloderm. **Sur′gical t.**, t. of the bones, joints, and other parts accessible to operative measures. **T. verruco′sa cu′tis**, characterized by dark brown plaques covered with minute pustules, vegetations, and crusts. **T. vertebra′rum**, vertebral disease. **Zoöglœ′ic t.**, pseudotuberculosis.

**Tuber′culous.** Relating to the disease tuberculosis. **T. depos′it**, tubercle. **T. disease′**, see *Tubercle* and *Tuberculosis*.

**Tuber′culum** (dim. of tuber). Tubercle. See *Tubercula* and *Tubercle*. **T. acus′ticum**, collection of nerve-cells behind the accessory auditory nucleus connected with fibres of the auditory nerve. **T. adeno′sum**, molluscum contagiosum. **T. atlan′tis anti′cum**, prominence on the anterior arch of the atlas, giving attachment to the longus colli muscle. **T. atlan′tis posti′cum**, prominence on the posterior arch of the atlas, taking the place of the spinous process of other vertebræ. **T. calca′neum**, tubercle of the calcaneum. **T. capit′uli fib′ulæ latera′le**, prominence on the head of the fibula giving rise to the peroneus longus. **T. carot′icum**, carotid tubercle. **T. cartilag′inis thyroide′æ**, triangular prominence at the upper border of the thyroid cartilage. **T. cauda′tum**, caudate lobe of the liver. **T. cine′reum**, a mass of cineritious substance at the top of the calamus scriptorius; continuous with the same substance in the cord, and on the sides with the corpus restiforme. **T. col′li fem′oris infe′rius**, tubercle of the femur. **T. col′li fem′oris supe′rius**, prominence at the upper end of the intertrochanteric line. **T. cos′tæ**, costal tubercles. **T. cunea′tum**, protuberance in the median cuneate funiculus of the medulla oblongata. **T. deltoide′um**, deltoid tubercle of the clavicle. **T. doloro′sum**, small, subcutaneous painful tumor on the nerves of the skin, chiefly about the joints; painful swelling caused by enlargement of the tip of a sensory nerve; see *Neuroma*. **T. ephip′pii**, olivary body. **T. epiglot′tidis**, eminence on the epiglottis. **T. exter′num hu′meri**, greater tuberosity of the humerus. **T. exter′num mandib′uli**, prominence on the inferior border of the lower jaw. **T. fas′ciæ denta′tæ**, prominence in the fascia dentata. **T. fib′ulæ**, styloid process of the fibula. **T. ileopectine′um**, pubic spine. **T. il′ii ante′rius i′mum**, eminence occasionally found on the upper surface of the ilium, which forms a groove with the ileopectineal prominence for the passage of the femoral vessels. **T. im′par**, small elevation from which the tongue develops, appearing about the fifth week of embryonal life, behind the inferior maxillary arch. **T. inter′num**, lesser tuberosity of the humerus. **T. jugula′re**, jugular tubercle. **T. la′bii superio′ris**, teat-like projection in the middle of the upper lip in nursing babies. **T. lacryma′le**, see *Lacrymal puncta*. **T. latera′le ta′li** or **media′le ta′li**, small eminence on the posterior border of the astragalus bounding the sides of the groove for the flexor longus pollicis. **T. linea′rum**, ridge below the occiput from which proceed the inferior curved lines. **T. Lisfranc′i**, tubercle on the first rib, giving attachment to the scalenus anticus. **T. Low′eri**, tubercle of Lower. **T. ma′jus**, greater tuberosity of the humerus. **T. mandibula′re**, articular eminences of the inferior maxillary bone. **T. menta′le inter′num**, genial tubercle. **T. mi′nus**, lesser tuberosity of the humerus. **T. olfacto′rium**, olfactory tubercle. **T. os′sis cuboide′i**, tubercle of the cuboid. **T. os′sis il′ii ante′rius i′mum**, iliopectineal spine. **T. os′sis multan′guli majo′ris**, ridge on the trapezium bounding externally the groove for the tendon of the flexor carpi radialis. **T. os′sis navicula′ris**, tubercle on the palmar surface of the scaphoid. **T. os′sis pu′bis**, spine of the pubis. **T. papilla′re**, papillary tubercle of the liver. **T. pharynge′um**, the tubercle from which springs the medial band connecting the pharynx with the occipital bone. **T. poste′rius** or **posti′cum**, greater tuberosity of the humerus. **T. pros′tatæ**, middle lobe of the prostate. **T. pu′bicum** or **pu′bis**, pubic spine. **T. Rolan′di**, tubercle of Rolando. **T. santorinia′num**, small eminences made by the cartilages of Santorini in the larynx. **T. scale′ni**, scalene tubercle. **T. seba′ceum**, milium. **T. sel′læ**, olivary body. **T. spino′sum**, spinous process of the sphenomaxillary bone. **T. supe′rius**, mammillary processes. **T. supracondyloide′um exter′num** and **media′le**, external and internal supracondyloid tubercle. **T. supracotyloide′um**, prominence at the junction of the acetabular margin and the anterior border of the ilium. **T. supratrag′icum**, small cartilages occasionally entering into the formation of the tragus. **T. vagi′næ**, prominence on the anterior wall of vaginæ. **T. wrisbergia′num**, whitish elevations on the inner surface of the arytenoepiglottidean fold produced by the cartilages of Wrisberg.

**Tu′berose.** Like a tuber or rhizome, as *t. carcinoma*.

**Tuberos′ity** (*tuber*, protuberance). An eminence or process, the surface of which is unequal and rough, giving attachment to muscles or ligaments. **Bicip′ital t.**, rough surface below the neck of the radius for insertion of the biceps muscle. **Cos′tal t.**, rough impression on the inferior surface of the clavicle for the rhomboid ligament. **Great t.**, thick projection from the external surface of the shaft of the humerus. **T. of the hu′merus**, see *Great t.* and *Small t.* **Il′iac t.**, t. on the ilium for the sacro-iliac ligament. **T. of is′chium**, a prominence on the ischium continued forward into the ramus. **T. of pal′ate**, pyramidal t. **Pubo-ischiat′ic t.**, rough surface at the junction of the rami of the pubis and ischium. **Pyram′idal t.**, tuberosity between the pterygoid plates of the palate-bone. **T. of scaph′oid**, tuberosity on the scaphoid bone for insertion of the tibialis anticus. **Scap′ular t.**, conoid tubercle. **Small t.**, tuberosity on the humerus separated from the great tuberosity by the bicipital groove. **T. of supe′rior maxil′la**, tuberosity on the posterior surface of the superior maxillary bone. **T. of tib′ia**, two tuberosities, internal and external, on the superior extremity of the tibia. **T. of trape′zium**, ridge on the anterior surface of that bone for the annular ligament. **T. of the tym′panum**, promontory of the tympanum. **Ul′nar t.**, ridge at the angle of junction of the coronoid process with the shaft of the ulna.

**Tu′berous.** Tuberose.

**Tu′biform.** Having the shape of a tube.

**Tu′bing.** See *Drainage-tubes* and *Intubation*.

**Tu′bo-abdom′inal preg′nancy.** See *Pregnancy*.

**Tuboligamen′tous.** Relating to the Fallopian tube and the broad ligament of the uterus.

**Tu′bo-ova′rial** or **Tu′bo-ova′rian.** Relating to the ovary and Fallopian tube. **T.-o. cyst**, caused by adhesion of a sactosalpinx to a cystic ovary, and the subsequent bursting of a small ovarian cyst into the tube and the establishment of permanent communication between the two. **T.-o. preg′nancy**, see *Pregnancy*.

**Tuboperitone′al.** Relating to the Fallopian tube and the peritoneum.

**Tubotym′panal canal′.** An embryonic invagination of the hypoblast, eventually forming the Eustachian tube and tympanum.

**Tu′bo-u′terine preg′nancy.** See *Pregnancy*.

**Tu′bula.** Tubule. **T. medulla′ris**, medullary tubule of the kidney.

**Tu′bular.** Relating to or having the form of a small tube. Applied to glands—*glandulæ tubulosæ*—having the shape of small tubes. Also applied to the primary nervous and muscular tissues. **T. blow′ing sound**, see *Murmur, respiratory*. **T. breath′ing**, bronchial respiration. **T. gesta′tion**, extra-uterine pregnancy in the Fallopian tube. **T. mem′brane**, perineurium. **T. neu′rine**, see *Neurine*. **T. sub′stance of the kid′ney**, see *Kidney*.

**Tu′bule** (dim. of *tubus*, tube). A small tube. **Den′tinal t.**, branches of canals traversing the basis substance of dentine. **Segmen′tal t.**, t. of Wolffian body. **Seminif′erous t.**, see *Tubuli seminiferi*. **Urinif′erous t.**, urinary tubules of the kidney.

**Tu′buli** (pl. of tubulus) **Belli′ni.** Uriniferous tubes. **T. contor′ti**, see *Uriniferous tubes*. **Den′tal t.**, see *Dental*. **T. du′ræ ma′tris**, sinuses of the dura mater. **T. Ferrei′ni**, see *Uriniferous tubes*. **T. galactoph′ori**, see *Lactiferous vessels*. **T. lactif′eri**, see *Lactiferous vessels*. **T. Morgag′nii**, see *Prostate*. **T. ner′vei**, nerve-fibres. **T. pel′vis re′num**, see *Calix*. **T. rec′ti**, see *Rete testis* and *Uriniferous tubes*. **T. semicircula′res membrana′cei**, see *Semicircular canals*. **T. semina′les**, see *Testicle*. **T. seminif′eri rec′ti**, see *Rete testis*. **T. urinif′eri Belli′ni**, uriniferous tubes.

**Tubuloracemose,** tu′bu-lo-ras′e-moze. Tubular and racemose or like a bunch of grapes. Some glands are of this description.

**Tu′bulose** or **Tu′bulous.** Tubular.

**Tu′bulus** (dim. of *tubus*, tube). Cannula; tubule. See also *Tubuli*. **T. centra′lis modi′oli**, see *Tractus spiralis foraminulentus*. **T. col′ligens**, collecting tubule. **T. conjuncti′vus**, conjunctival tubule. **T. intercala′ris**, distal convoluted tubule of the kidney. **T. laqueifor′mis**, descending loop-tube of Henle. **T. spira′lis modi′oli**, see *Tractus spiralis foraminulentus*.

**Tu′bus.** Tube. **T. acus′ticus**, ear-trumpet. **T. alimenta′rius** or **ciba′rius**, alimentary canal. **T. digesto′rius** or **digesti′vus**, part of the intestinal tract below the cardiac end of the stomach. **T. ingesto′rius**, part of the alimentary tract above the cardiac end of the stomach. **T. intestino′rum**, alimentary canal. **T. nervo′rum**, neurilemma. **T. pollin′icus**, see *Pollen*. **T. prox′imus convolu′tus**, wide canal formed by the urinary tubes of the kidney. **T. vermicula′ris cæ′ci**, appendix vermiformis cæci.

**Tuck′aho.** Lycoperdon tuber.

**Tu′cum oil.** Oil obtained from the fruit of Astrocaryum vulgare.

**Tuerck.** See *Türck*.

**Tuffier's** (tue-fe-aze′) **infe′rior lig′ament.** Portion of the mesentery attached to the iliac fossa. **T.'s syn′drome**, general debility of the tissues, congenital, and leading to faulty position and location of various organs, producing, for instance, visceral prolapse, varicocele, displacement of the uterus, etc.

**Tuf′nell's meth′od.** Treatment of aneurysm by means of dry diet and absolute rest.

**Tuft, Malpigh′ian.** Collection of tubular vessels in the kidney.

**Tug′ging, tra′cheal.** Strong traction on the trachea in a downward direction, in aneurysm of the arch of the aorta.

**Tulbagh′ia allia′cea.** South African plant, ord. *Asphodeleæ*, the bulbs of which, boiled in milk, are recommended in phthisis and as an anthelmintic. T. cepacea and T. violacea serve the same purpose.

**Tu′lip, Cape.** Homeria collina. **T. tree**, liriodendron.

**Tulipif′era lirioden′dron** (*tulipa*, tulip, *fero*, to bear). Liriodendron tulipifera.

**Tulipine′.** Alkaloid from the garden tulip. Sialagogue. In therapeutic action, like veratrine or colchicine.

**Tul′ly's pow′der.** Pulvis morphinæ compositus.

**Tul′pius's valve.** Valve of Bauhin.

**Tumefa′cient.** Swollen. Producing swelling.

**Tumefac′tion** (*tumeo*, to swell, *facio*, to make). Swelling; puffiness.

**Tu′menol.** Substance derived from mineral oils, consisting of *t. oil* or *t. sulphone*, and *t. powder* or *t. sulphonic acid*. Antipruritic and desiccative in affections of the skin. **T. sulphon′ic acid**, tumenol.

**Tumes′cence.** Process or act of swelling.

**Tumescen′tia pituito′sa.** Dropsical habit. Anasarca; œdema.

**Tu′mid.** Swollen; enlarged.

**Tumid′ity.** State of being swollen or puffed up.

**Tu′mor** (*tumeo*, to swell). Circumscribed enlargement of a part due to the presence of a morbid growth. The following (by Beach) is a conveniently arranged table of the

CLASSIFICATION OF TUMORS ACCORDING TO THE PHYSIOLOGICAL TYPE:

*Histoid or Connective-tissue Tumors.*

| | |
|---|---|
| Fibrillar connective tissue . . . | Fibroma. |
| Mucous tissue . . . . . . . | Myxoma. |
| Embryonal connective tissue . . . | Sarcoma. |
| Endothelial cells . . . . . . | Endothelioma. |
| Adipose tissue . . . . . . | Lipoma. |
| Cartilage . . . . . . . | Chondroma. |
| Bone . . . . . . . . | Osteoma. |
| Neuroglia-cells . . . . . . | Glioma. |
| Lymphoid tissue . . . . . . | Lymphoma. |

| | |
|---|---|
| *Muscle-tissue Tumors or Myomata.* | |
| Smooth-muscle tissue | Leiomyoma. |
| Striated-muscle tissue | Rhabdomyoma. |
| *Vascular-tissue Tumors or Angiomata.* | |
| Blood-vessels | Angioma. |
| Lymphatic vessels | Lymphangioma. |
| *Epithelial Tumors.* | |
| Nerve-tissue | Neuroma. |
| Skin and mucous membrane | Papilloma. |
| Glands | Adenoma. |
| Various forms of epithelial cells and associated tissue | Carcinoma. |

**Ad′enoid t.**, adenoma. **T. adipo′sus**, lipoma. **T. al′bus**, hydrarthrus. **Anom′alous t.**, hæmatodes fungus. **Benign′ t.**, tumor of slow growth, usually limited in size and encapsulated, approximating in structure normal tissue, having no tendency to recur after removal or to extend by metastasis. **Bu′tyroid t.**, see *Butyroid*. **T. cap′itis sanguin′eus**, cephalæmatoma. **T. car′neus**, sarcoma. **T. cartilagino′sus**, chondroma. **Cav′ernous t.**, telangiectatic tumor; tumor having a loosely reticulated structure resembling the corpora cavernosa of the penis. **Cel′lular t.**, tumor occurring in cellular tissue which does not contain fat. **Cellulofi′brous t.**, fibrocellular tumor. **T. cheloi′des**, see *Cancroid*. **Col′loid t.**, tumor containing colloid material. **T. cys′ticus**, an encysted tumor. **T. cys′ticus sero′sus**, hygroma. **Dendrit′ic t.**, warty growth having a number of branches. **Den′tinoid t.**, dental osteoma. **T. desmoi′des**, fibrous tumor. **Dilata′tion t.**, retention cyst. **Epithe′lial t.**, see *Epithelial*. **Erec′tile t.**, tumor composed of a soft, vascular tissue which is susceptible of elevation and depression; see *Erectile*. **Fat′ty t.**, lipoma. **T. fibroadipo′sus**, fibrofatty tumor. **Fibrocalca′reous t.**, fibrous tumor containing earthy matter. **Fibrocel′lular t.**, cellulofibrous tumor; soft and elastic form of fibrous tumor. **Fibrocys′tic t.**, fibrous t. containing cysts. **Fibrofat′ty t.**, fibrous t. containing fat. **Fi′broid t.**, fibrous t. **Fibromus′cular t.**, see *Myoma*. **Fibronu′cleated t.**, t. composed of fibrous tissue mixed with elongated nuclei. **Fibroplas′tic t.**, myeloid sarcoma. **Fi′brous t.**, dermoid tumor, fibrous growth, fibroma, fibroid, tumor fibrosus; tumor or growth formed of fibrous tissue. When recurring after repeated removal the term recurrent fibroid, sarcoma fusocellulare, tumor fibrosus recurrens, is applied to it. **T. fico′sus**, ficus. **Flat t.**, tumor having a slightly elevated, broad, flat surface. **T. flatulen′tus**, emphysema. **Float′ing t.**, movable mass in the abdomen, about the size and shape of the kidney; it may be a movable kidney or a loosely attached ovarian cyst, collection of fæces, etc. **T. fu′gax**, a swelling that appears and disappears. **Fun′gating t.**, see *Fungating*. **T. fungo′sus artic′uli**, spina ventosa. **T. fungo′sus sanguin′eus**, hæmatodes fungus. **Fun′gous t.**, cauliflower excrescence; tumor having a short, thick neck or pedicle. **T. ganglifor′mis**, nervous ganglion. **T. gena′rum**, meloncus. **T. ge′nu al′bus**, white swelling of the knee. **T. glan′dulæ parotide′æ**, swelling or tumor of the parotid. **Glan′dular t.**, tumor growing in or near a gland, and resembling it in structure; see *Adenoma*. **Granula′tion t.**, see *Granulation*. **Gum′matous t.**, gumma. **Gum′myt.**, gumma. **Hard t.**, term applied to tumors of hard consistence. **Heterol′ogous t.**, a tumor composed of different tissue from that from which it springs. **His′toid t.**, see *Sarcoma* and *Histoid*. **Homol′ogous t.**, a tumor which is composed of the tissue from which it springs. **In′filtrating t.**, tumor devoid of a distinct line of demarcation between itself and healthy tissue. **In′nocent t.**, benign tumor. **T. lac′teus**, galactocele. **Lam′inated na′creous fat′ty t.**, cholesteatoma. **T. lar′deus**, steatoma. **Leukæ′mic t.**, lymphoma. **Lymph′oid t.**, lymphoma. **T. mala′rum**, meloncus. **Malig′nant t.**, tumor of rapid growth, without limit as to size, differing in structure from surrounding tissue which it infiltrates, and the tendency of which is destructive. **Med′ullary t.**, tumor of soft consistence due to excess of cellular over connective tissue. **Mil′iary t.**, minute, circumscribed growth, usually secondary rather than primary. **Milk′-like t.**, encephaloid. **Mixed t.**, tumor composed of more than one kind of tissue—the fibromuscular, for example. **Mu′cous t.**, myxoma. **Mus′cular t.**, myoma. **T. myelo′des**, see *Myeloid*. **Myelogen′ic t.**, see *Myelogenic*. **Nerve t.**, neuroma. **Neural′gic t.**, tumor which, without perceptible reason, is the seat of neuralgic pain. **Or′ganoid t.**, tumor following the type of an organ in that it is composed of more than one tissue. **Os′seous t.**, see *Exostosis*. **T. ova′rii**, ovarian tumor. **Pap′illary t.**, papilloma. **T. parot′idis**, tumor or swelling of the parotid gland. **Pearl′y t.**, cholesteatoma. **Phan′tom t.**, see *Phantom*. **Pol′ypoid** or **pedun′culated t.**, tumor having a long, narrow pedicle. **T. pros′tatæ**, swelling of the prostate gland. **Pulp t.**, hyloma. **Pul′sating t.**, tumor having pulsation due to the state of the intramural blood-vessels, independently of its proximity to large vessels. **T. rena′lis**, tumor of the kidney. **Reten′tion t.**, retention cyst. **Rind t.**, lepidoma. **Sand t.**, psammoma acervuloma. **Sanguin′eous t.**, hæmatocele; hæmatoma. **Sarco′matous t.**, see *Sarcoma*. **Scir′rhous t.**, tumor having hard consistence, due to excess of connective over cellular tissue. **Seba′ceous t.**, fatty t., see *Sebaceous*. **Soft t.**, term applied to tumor of soft consistence. **T. squamiform′is carno′sus**, a fleshy tumor covered with scales. **Splen′ic t.**, hypertrophied spleen. **Sys′temoid t.**, teratoid t. **Tar′sal t.**, chalaza. **Telangiectat′ic t.**, cavernous t. **Ten′dinous t.**, see *Tendinous*. **Ter′atoid t.**, tumor made up of a number of tissues resembling an organ or system of organs—dermoid cyst. **Transi′tion t.**, recurrent tumor having a disposition to assume a more malignant form. **T. tuberculo′sus**, tuberculate sarcoma. **T. tunica′tus**, an encysted tumor. **T. u′teri**, tumor of the uterus. **Vag′inal t.**, elytroncus. **Var′icose t.**, circumscribed, bluish tumor, formed by the dilatation and turgescence of the capillary vessels of a part. **Vas′cular t.**, nævus, hemorrhoid, angioma. **T. villo′sus**, papilloma. **Wart′y t. of cica′trices**, see *Warty tumor*.

**Tumul′tus cor′dis.** Irregularity of action of the heart. **T. sermo′nis**, stuttering method of reading.

**Tun′belly.** Physconia.

**Tun′da oc′uli.** Conjunctival membrane.

**Tun′dus cor′dis.** Apex of the heart.

**Tun′ga.** Chique.

**Tung′state.** A salt of tungstic acid; several are used as tests. **Cal′cium t.**, a salt used in x-ray examinations.

**Tung′sten.** A metal, symbol W.

**Tung′stic acid.** $H_2WO_4$.

**Tu′nic.** Envelope. One of the membranes which envelop organs or hollow structures, as the tunics of the eye, intestine, blood-vessels, etc. See *Tunica*. **Bichat's′ t.**, tunica intima. **Brück′e's t.**, tunica nervea. **Ja′cob's t.**, tunica Jacobi. **Ruysch's t.**, tunica ruyschiana.

**Tu′nica.** Tunic. **T. abdomina′lis**, deep layer of superficial fascia of quadrupeds. **T. acina′lis**, uvea. **T. acinifor′mis**, uvea. **T. acino′sa**, uvea. **T. adipo′sa re′num**, fatty investment of the kidney. **T. adna′ta**, conjunctiva; also applied to the visceral portion of the tunica vaginalis testis. **T. adventit′ia**, external coat of an artery. **T. agna′ta**, conjunctiva. **T. al′ba oc′uli**, sclerotic. **T. albugin′ea**, albuginea; see *Kidney*. **T. a. cor′porum cavernoso′rum pe′nis**, fibrous investment of the corpora cavernosa. **T. a. epidid′ymis**, fibrous investment of the epididymis. **T. a. lie′nis**, fibrous capsule of the spleen. **T. a. oc′uli**, sclerotic. **T. a. ova′rii**, condensed layer of stroma on the surface of the ovary. **T. a. tes′tis**, albuginea testis. **T. allantoi′des**, allantois. **T. amphiblestroi′des**, retina. **T. arachnoide′a oc′uli**, lamina fusca. **T. arachnoi′des**, arachnoid membrane. **T. cadu′ca**, decidua. **T. can′dida oc′uli**, sclerotic. **T. car′nea**, dartos. **T. carno′sa**, panniculus carnosus. **T. cellula′ris**, t. adventitia. **T. cellulo′sa**, mucous membrane. **T. cer′ebri**, dura mater. **T. c. pro′pria**, pia mater. **T. choroide′a**, choroid coat of the eye. **T. cilia′ris**, ciliary muscles and processes. **T. commu′nis**, cremaster muscle. **T. conjuncti′va**, conjunctiva. **T. c. palpebra′rum**, conjunctiva covering the inner surface of the eyelids. **T. cor′nea opa′ca**, sclerotic coat. **T. c. pellu′cida**, cornea. **T. costa′lis**, pleura. **T. cras′sa**, decidua. **T. crystal′lina**, arachnoid membrane. **T. dar′tos**, see *Dartos*. **T. decid′ua reflex′a**, see *Decidua reflexa*. **T. d. u′teri**, see *Decidua vera*. **T. demorsia′na**, membrane of Descemet. **T. du′ra oc′uli**, sclerotic. **T. du′rior et cras′sa**, sclerotic. **T. elas′tica**, t. media. **T. elytroi′des**, vaginal coat. **T. erythroi′des**, cremaster. **T. exte′rior o′vi**, decidua. **T. exter′na**, t. adventitia. **T. e. oc′uli**, sclerotic. **T. farcimina′lis**, allantois. **T. fibro′sa albugin′ea tes′tis**, see *Cavernous bodies* and *Folliculi graafiani*. **T. f. commu′nis**, vaginal coat of the testicle. **T. f. oc′uli**, fibrous coat of the eye formed by the sclerotic and cornea. **T. f. re′num**, fibrous investment of the kidney. **T. f. of spleen**, fibrous investment of the spleen. **T. filamento′sa**, decidua. **T. gla′bra**, t. intima. **T. horten′sis**, Dianthus caryophyllus. **T. hyali′na pro′pria**, transparent layer of membranous semicircular canals situated between layers of connective tissue and of papilliform processes. **T. innomina′ta oc′uli**, sclerotic. **T. inter′na oc′uli**, retina. **T. in′tima**, internal coat of an artery. **T. i. oc′uli**, retina. **T. Jaco′bi**, Jacob's coat or membrane, bacillar layer of the retina; layer of rods and cones situated between the membrana limitans externa and the pigmentary layer of the retina; these rods and cones are connected with the internal layers of the retina by means of the fibres of Müller. **T. me′dia**, middle coat of an artery. **T. muco′sa pharyn′gis**, mucous membrane of the pharynx. **T. muscula′ris**, dartos. **T. ner′vea oc′uli**, retina. **T. nervo′rum**, neurilemma. **T. perfora′ta**, uvea. **T. pharyn′gis**, fibrous investment of the pharynx. **T. præten′sa abdom′inis**, peritoneum. **T. pro′pria hep′atis**, fibrous investment of the liver. **T. p. lie′nis**, splenic capsule. **T. p. ova′rii**, tunica albuginea of the ovary. **T. p. pharyn′gis**, pharyngeal mucous membrane. **T. p. re′nis**, fibrous capsule of the kidney. **T. p. tes′tis**, tunica albuginea of the testicle. **T. reticula′ris**, retina. **T. retifor′mis**, retina. **T. rhagoi′des**, tunica choroidea; uvea. **T. rubicun′da scro′ti**, dartos. **T. ru′bra**, Dianthus caryophyllus. **T. ruyschia′na**, see *Choroid*. **T. scle′ra bul′bi**, sclerotic coat. **T. sero′sa tes′tis**, tunica vaginalis propria. **T. subcosta′lis**, pleura. **T. tendino′sa oc′uli**, see *Sclerotic*. **T. thora′cis**, corset. **T. uva′lis**, uvea. **T. u′vea**, uvea. **T. uvifor′mis**, uvea. **T. vagina′lis**, see *Vaginal*. **T. v. bul′bi**, capsule of Bonnet. **T. v. commu′nis et funic′uli spermat′ici**, vaginal coat of the testicle. **T. v. lin′guæ**, see *Tongue*. **T. v. oc′uli**, capsule of Ténon of the eye. **T. v. pro′pria**, vaginal coat of the testicle. **T. v. p. funic′uli spermat′ici**, infundibuliform fascia. **T. v. reflex′a**, vaginal coat of the testicle. **T. v. tes′tis**, see *Testicle*. **T. vasculo′sa Hal′leri**, one of the two layers of vessels of the choroid formed by the coarser arterial and venous trunks. **T. vasculo′sa len′tis**, vascular membrane surrounding the crystalline lens in the fœtus. **T. v. oc′uli**, choroid; see *Eye*. **T. v. tes′tis**, vascular coat of the testis, an extremely delicate vascular membrane situated immediately within the tunica albuginea and enclosing the substance of the gland. **T. vit′rea**, hyaloid membrane.

**Tunic′ula** (dim. of tunica). Tunicle. Fine membrane, coat, or skin. Clitoris.

**Tun′nel anæ′mia.** Tunnel disease. **T. of Cor′ti**, see *Corti*. **T. disease′**, caisson disease; also ankylostomiasis.

**Tu′pelo.** Tree indigenous to the United States, the bark of which is sometimes used in making uterine tents.

**Tupina′ria.** Talpa.

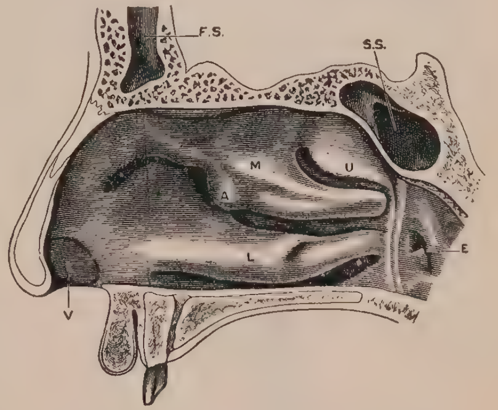
**Turbatio′nes an′imi** (*turbo*, to disorder). Affections of the mind.

**Tur′beth min′eral.** Hydrargyri subsulphas flavus. **Montpel′lier t.**, Globularia alypum. **T. plant**, Convolvulus turpethum.

**Tur′binal.** Term sometimes applied to the inferior turbinated bones.

**Tur′binate.** Turbinated. **T. bod′ies**, formed by the turbinate bones and their vascular spongy covering.

**Tur′binated bones** (*turbo*, a top). Very thin bony plates rolled up in the form of scrolls and situated in the nasal fossa: 1. Superior spongy bone, the highest. 2. Middle spongy bone; this bone projects inward and downward into the cavity of the nose from the ethmoid cells at the side of the nasal lamella. 3. Inferior spongy or turbinated bone, lowest of the turbinated bones, and connected to the os maxillare, os palati, and os unguis. 4. Sphenoidal cornu. Sometimes the posterior part of the superior turbinated is detached, forming a separate bone, the concha santoriana or fourth t. b. **T. crests**, ridges on the os maxillare and os palati for articulation with the inferior and middle turbinated bones. **T. pro′cesses**, turbinated bones.



Anteroposterior section of the nose, showing the outer wall of the right nasal cavity; L, inferior turbinate; M, middle turbinate; A, anterior end of middle turbinate; U, superior turbinate; F, S, frontal sinus; S, S, sphenoidal sinus; E, orifice of Eustachian tube; V, vestibule. (Zuckerkandl.)

**Turbinec′tomy.** Excision of a turbinated bone.

**Turbin′otome.** Instrument for the performance of turbinotomy.

**Turbinot′omy.** Incision into or operation on a turbinated body or bone.

**Tur′bo cer′ebri.** Pineal gland.

**Türck's bun′dle.** Temporo-occipital tract of the crusta. **T.'s col′umn**, direct pyramidal tract of the spinal cord. **T.'s degenera′tion**, secondary degeneration of the parenchyma of the nerve-tracts of the spinal cord. **T.'s hemianæsthe′sia**, loss of sensation implicating the functions of the posterior spinal roots of one side; also occasionally those of nerves of special sense. **T.'s tracho′ma**, laryngitis sicca.

**Turgen′tia.** Turgescence.

**Turges′cence** (*turgeo*, to swell). Turgescency, turgidity, turgidness. Swelling or distention of a part. Turgescence of bile formerly denoted the passage of that fluid into the stomach and its discharge by vomiting.

**Tur′gid.** Swollen.

**Turgid′ity.** Turgescence.

**Tur′gidness.** Turgescence.

**Tur′gor.** Absolute fulness. A state of turgidity. **T. vita′lis**, normal fulness of the blood-vessels.

**Tur′key corn.** Corydalis formosa. **T. galls**, nutgalls from Turkey. **T. gum**, term applied to various species of Egyptian gums. **T. o′pium**, opium imported from Turkey, produced in various countries of Asia Minor. **T. pea**, Gephrosia virginiana.

**Tur′kish bath.** Bath in which the individual passes into apartments of increasing air temperature, which induces profuse sweating, after which he undergoes shampooing of the whole body, followed by a cold douche.

**Tur′meric.** Curcuma longa; Sanguinaria canadensis. **T. pa′per,** unsized paper stained yellow with decoction of turmeric, used as a test for free alkali, which changes its color to brown.

**Tur′merol.** Aromatic volatile principle of turmeric.

**Turn.** To perform version on the child in utero. **T. of life,** menopause.

**Turn′bull's blue.** Ferrous ferricyanide.

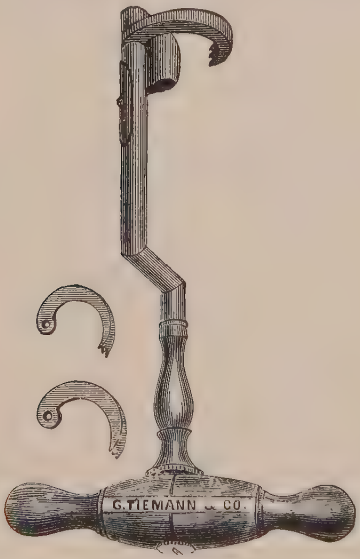
**Turne′ra aphrodisi′aca.** Mexican plant from which damiana is said to be derived. **T. microphyl′la,** plant indigenous to Mexico, also supposed to be a source of damiana. **T. opif′era,** plant indigenous to Brazil; leaves have astringent properties. **T. ulmiflo′ra,** plant of West Indies; aromatic tonic properties.

**Tur′ner's ce′rate.** Calamine ointment.

**Turn′ing.** See *Version.*

**Tur′nip.** Brassica rapa. **T. dra′gon,** Arum triphyllum. **In′dian t.,** Arum triphyllum. **Pep′per t.,** Arum triphyllum. **Prai′rie t.,** Camasia esculenta.

**Turn′key.** Instrument used for extracting teeth.



Turnkey.

**Turns.** Menses.

**Turn′sick.** Vertiginous.

**Turn′sole.** Lichen roccella.

**Turn′table.** Instrument having a revolving plate, used in mounting microscopic slides.

**Tur′pentine.** Terebinthina. **Bordeaux′ t.,** see *Pinus sylvestris.* **Brian′con t.,** see *Pinus cembra.* **T. cam′phor,** $C_{10}H_{10}HCl$, terpene hydrochlorate; internally antiseptic, externally a local anæsthetic. **Can′ada t.,** Canada balsam. **Chi′an t.,** see *Pistacia terebinthus.* **Com′mon Amer′ican t.,** see *Pinus sylvestris.* **Cy′prus t.,** see *Pistacia terebinthus.* **Damar′ra t.,** see *Pinus damarra.* **Dom′beya t.,** see *Dombeya excelsa.* **T. e′ther,** æther terebinthinatus. **Horse t.,** see *Pinus sylvestris.* **Hunga′rian t.,** t. from Pinus pumilio. **Larch t.,** Venice t. **Stras′burg t.,** see *Pinus picea.* **T. tree,** Pistacia terebinthus. **Ven′ice t.,** see *Pinus larix* and *Pistacia terebinthus.* **White t.,** see *Pinus sylvestris.*

**Tur′peth.** Root of Ipomæa turpethum; purgative. **T. min′eral,** hydrargyri sulphas flava.

**Turpethin′.** $C_{34}H_{56}O_{16}$. Glucoside from turpeth.

**Turpe′thum.** Convolvulus turpethum. **T. minera′le,** hydrargyri sulphas flava. **T. ni′grum,** hydrargyri oxydum cinereum.

**Tur′tle bloom.** Chelone glabra. **Green t.,** Chelonia mydas. **T. head,** Chelone glabra.

**Turun′da, Turun′dula.** Tent.

**Tus.** See *Pinus abies.*

**Tusk.** Enormously prolonged tooth projecting beyond the lips.

**Tussa′ca reticula′ta.** Goodyera pubescens.

**Tus′sal** (*tussis,* cough). Pertaining to cough.

**Tusse′do.** Tussis.

**Tussic′ula.** A slight cough.

**Tussic′ular** or **Tussic′ulous** (*tussicula,* slight cough). Relating to a slight cough.

**Tussila′go.** Coltsfoot, foalfoot; ord. *Compositæ.* Demulcent and expectorant, and used in pulmonary affections and in some cutaneous diseases. **T. far′fara,** tussilago. **T. hy′brida,** T. petasites. **T. petasi′tes,** butturbur, pestilentwort; roots are said to be aperient and alexipharmic. **T. petasi′tes hermaphrodi′ta,** T. petasites. **T. vulga′ris,** tussilago.

**Tus′sis.** Cough, coughing. Harsh, sonorous sound produced by deep, long-drawn inspiration, followed by complete closure of the glottis and then forced expiration, in the midst of which the glottis suddenly opens. The cough is said to be dry when unaccompanied by expectoration. **T. amphemer′ina,** pertussis. **T. asini′na,** pertussis. **T. bron′chica,** tubal cough; see *Bronchitis.* **T. cani′na,** pertussis. **T. catarrha′lis sim′plex,** catarrh. **T. clamo′sa,** pertussis. **T. clango′sa,** pertussis. **T. convulsi′va,** pertussis. **T. delas′sans,** pertussis. **T. feri′na,** pertussis. **T. pu′eros stran′gulans,** pertussis. **T. quin′ta,** pertussis. **T. seni′lis,** chronic bronchitis of the aged. **T. spasmod′ica,** pertussis. **T. stomacha′lis,** pertussis. **T. suf′focans,** pertussis. **T. suffocati′va,** pertussis. **T. tussiculo′sa,** pertussis.

**Tus′sive** (*tussis,* cough). Belonging or relating to cough, as tussive vibration, the vibration of the parietes of the chest, caused by coughing.

**Tus′sol.** Antipyrin mandelate or phenylglycolate. A salt of antipyrin employed in whooping-cough, in doses of gr. ¾–v (0.05–0.32), according to the age of the child.

**Tuta′mina** (*tutamen,* protection). Parts which defend or protect others. **T. cer′ebri,** the scalp, pericranium, bones of the skull, and the meninges. **T. oc′uli,** eyebrows, eyelids, and lacrymal apparatus.

**Tu′thia** or **Tu′tia.** Tutty. The oxide of zinc that attaches itself in the form of gray incrustations to the chimneys of furnaces in which ores of zinc are smelted. Sometimes used for making an eye-salve.

**Tu′tu.** Coriaria myrtifolia.

**Twang.** Nasal tone of the voice. Sharp after-taste.

**'Tween-brain.** Thalamencephalon, interbrain, or second vesicle of the embryonic brain.

**Twelfth cra′nial nerve.** Hypoglossal nerve. **T. year mo′lar,** second permanent molar.

**Twin.** Gemellus; one of two children born of the same mother at the same labor. Twofold; double. **T. la′bor,** labor in which twins are born.

**Twinge.** See *Pain.*

**Twin′leaf.** Jeffersonia bartoni or diphylla.

**Twin′root.** Orchis.

**Twins.** Plural of twin. **Homoge′neous t.,** two fœtuses in one uterus, similar in sex and physical characteristics. **Joined t.,** two beings united together, as the Siamese twins. **Siamese′ t.,** two brothers, Chang and Eng, connected by a ligamentous band from the epigastrium of one to that of the other. See *Xiphopages.*

**Twitch′grass.** Triticum repens.

**Twitch′ing.** Tic.

**'Twixt-brain.** 'Tween-brain.

**Two-needles opera′tion.** Operation of discission of cataract.

**Tych′ica** (*tyche,* accident). Fortuitous lesions or deformities.

**Ty′le** (*tylos,* callus). Callosity.

**Tyl'ion.** Craniometrical point on the anterior border of the optic groove in the middle line.

**Tylo'ma** (*tylos*, callus). Callosity.

**Tyloph'ora asthmat'ica.** Ipecacuanha of the Isle of France; ord. *Asclepiadaceæ.* A native of the East Indies; root is acrid; in large doses emetic; in smaller, often repeated, cathartic aud diaphoretic.

**Tylophorine'.** Alkaloid from Tylophora asthmatica.

**Tylo'sis.** Callosity. Inflammation of the lids when the substance of the lid, along the margin, is thickened and hardened. **T. bulbo'sa,** clavus. **T. gom'phos,** clavus. **T. lin'guæ,** leucoplakia buccalis.

**Tylostere'sis** (*tylos*, callus, *steresis*, privation). Removal of callus.

**Ty'lus** (*tylos*, callus). Callosity.

**Tym'ma** (*tymma*, a blow). Wound.

**Tym'panal.** Tympanic.

**Tympanec'tomy** (*ektome*, excision). Excision of the membrana tympani.

**Tympan'ia** or **Tympan'ias.** Tympanites.

**Tympan'ic.** Relating to the tympanum. Tympanitic. **T. an'gle,** angle formed by the junction of the basilar membrane of the ductus cochlearis with the cochlear wall. **T. ar'teries,** arteries of the tympanum; tympanic branch of the internal maxillary to the membrana tympani; stylomastoid branch of the posterior auricular to the back part of the tympanum and mastoid cells; petrosal branch of the middle meningeal; branch from the ascending pharyngeal; and tympanic branch of the internal carotid. **T. at'tic,** attic of the tympanum. **T. bone,** curved plate of bone in the adult, forming the front and lower parts of the auditory canal, but existing in the fœtus as a separate ring. **T. mem'brane,** see *Tympanum.* **T. nerve,** see *Petrous ganglion.* **T. pas'sage,** scala tympani. **T. plate,** t. bone. **T. plex'us,** nervous anastomosis on the promontory of the tympanum. **T. res'onance,** tympanic resonance. **T. ring,** bony ring, becoming, at a later period, the tympanic plate. **T. ten'sor,** tensor tympani muscle.

**Tym'panichord.** Chorda tympani.

**Tympanicolingua'lis.** Common trunk from the junction of the chorda tympani, gustatory nerve, and branch from the otic ganglion.

**Tympanicomas'toid.** Tympanomastoid. **T. fis'sure,** furrow indicating the junction of the mastoid with the tympanic portion of the temporal bone.

**Tym'panism.** State of parts affected with tympanites.

**Tympani'tes** (*tympanon*, drum). Tympany, meteorism, drum belly, wind dropsy. A swelling of the abdomen, caused by the accumulation of air in the intestinal tube or in the peritoneal cavity. Tympanites may be idiopathic or symptomatic. The former is due to the collection of gas from fermentation or decomposition of the intestinal contents; the latter to retention of gas resulting from an organic lesion, usually obstructive in its nature. Sometimes air is contained in the peritoneal cavity, constituting *tympanites abdominalis*—the accumulation in the intestines being called *tympanites intestinalis.* **U'terine t.,** physometra.

**Tympanit'ic.** Relating to tympanites or to tympanitis. Possessing a hollow sound. **T. dul'ness,** subnormal percussion resonance. **T. res'onance,** sound produced by percussion over cavities distended by air.

**Tympani'tis.** Inflammation of the lining membrane of the middle ear or tympanum; otitis media.

**Tympanocer'vical.** Relating to or affecting the tympanum and neck conjointly.

**Tym'pano-Eusta'chian.** Relating to or affecting both the tympanum and Eustachian tube.

**Tympanohy'al.** Fetal ossicle separated from the hyoid bone in the embryo, and later disappearing by becoming ossified to the adjacent parts of the periotic capsule.

**Tympanomal'leal.** Relating to the tympanic bone and malleus.

**Tympanomandib'ular.** Tympanomaxillary.

**Tympanomas'toid.** Relating to the tympanum and mastoid process. **T. exentera'tion,** Stacke's operation.

**Tympanomax'illary.** Relating to the middle ear and lower jaw. **T. car'tilage,** Meckel's cartilage.

**Tympanoph'ony** (*tympanon*, drum, *phone*, voice). Abnormal sounds in the ear; tinnitus aurium.

**Tympano'sis.** Tympanites.

**Tympanotem'poral.** Relating to or affecting the tympanum and temporal region.

**Tympanot'omy.** Operation on the tympanum; paracentesis of the membrana tympani.

**Tym'panum** (*tympanon*, drum). Drum or barrel of the ear. A cavity of an irregular shape, constituting the middle ear, situated in the petrous portion of the temporal bone, between the meatus auditorius externus and the labyrinth. This cavity has six walls: 1. The roof. 2. The outer wall, formed by the tympanic plate and membrana tympani, a thin, semitransparent, circular membrane, convex within, concave without, closing the inner extremity of the meatus auditorius externus; this wall presents for examination the aperture of the iter chordæ posterius, Gasserian or glenoid fissure, and opening for the iter chordæ anterius. 3. Floor. 4. Internal wall, on which are fenestra ovalis, fenestra rotunda or foramen rotundum, promontory, ridge of the aquæductus Fallopii, pyramid, and opening for the stapedius. 5. Posterior wall, presenting for examination the opening of the mastoid cells. 6. Anterior wall, on which are the processus cochleariformis, orifice of the Eustachian tube, and canal for the tensor tympani. **T. mi'nus,** see *Fenestra.* **T. secunda'rium,** see *Fenestra.*

**Tym'pany.** Tympanites. **U'terine t.,** physometra.

**Tyndaliza'tion** (after J. Tyndall). Intermittent or fractional sterilization, effected by heating the fluid repeatedly to a point below 100° C. (212° F.), but sufficiently high to destroy the developed germs. The spores are not killed, but as they develop into the adult forms these are destroyed, and the repeated heatings thus finally render the fluid absolutely sterile.

**Type** (*typos*, a stamp). Character. Form in which the symptoms of a disease exhibit themselves and succeed each other. **Test-t.,** see *Test.*

**Ty'pha.** Genus of plants, ord. *Typhaceæ.* **T. angustifo'lia** has the same properties as **T. aromat'ica,** Acorus calamus, and **T. latifo'lia,** cat-tail, reed-mace, bull's egg; plant common in marshes and ponds in this country and in Europe; the roots have been used in dysentery and blennorrhagia; the down of the flower has been applied to burns.

**Typhæ'mia.** Typhus fever. See *Putrefaction.*

**Typhfe'ver.** Typhus or typhoid fever.

**Ty'phic.** Typhoid. Relating to typhus fever.

**Typhin'ia.** Relapsing fever.

**Typhlenteri'tis.** Typhlitis.

**Typhli'tis** (*typhlos*, blind). Inflammation of the cæcum, occasionally leading to perforative ulceration, and usually accompanied with inflammation of the ascending colon. **T. stercora'lis,** typhloenteritis.

**Typhlo-** (*typhlos*, blind). In composition, cæcum.

**Typhlodiclidi'tis** (*diklis*, a doubling). Inflammation of the iliocæcal valve.

**Typhloempye'ma.** Abscess accompanying typhlitis or appendicitis.

**Typhloenteri'tis.** Typhlitis.

**Typhloen'terum** (*typhlos*, blind, *enteron*, intestine). Cæcum.

**Typhlolithi'asis.** Formation of concretions in the cæcum.

**Typhlol'ogy** (*typhlos*, blind). Science in relation to blindness, its causes and treatment.

**Typhlo'sis.** Blindness.

**Typhlosteno'sis.** Stricture of the cæcum.

**Typhloteri'tis.** Typhloenteritis.

**Typhlot'omy.** Operation on the cæcum.

**Typhlotroph'ium.** Blind asylum.

**Typho-** (*typhos*, stupor). In composition, typhus, typhoid.

**Typhoæ′mia.** Typhæmia.

**Typhobacillo′sis.** Toxic constitutional effects of the toxins of Bacillus typhosus.

**Typho′des.** Typhous.

**Typhohæ′mia** (*typhos*, stupor, *haima*, blood). Typhæmia.

**Ty′phoid** (*eidos*, resemblance). Resembling typhus. **T. bacil′lus,** Eberth bacillus, specific microbe of typhoid fever; it is active, rod-shaped, with rounded ends, three times as long as it is broad, occurring alone in tissue sections, but in long chains in cultures. **Bil′ious t.,** icteric form of relapsing fever. **Chol′era t.,** typhoid condition after the cold stage of cholera. **T. condi′tion,** this includes all the symptoms of prostration, such as delirium, dry tongue, feeble pulse, subsultus tendinum, met with in typhoid, typhus, and other diseases. **T. erysip′elas,** name given to an epidemic disease prevailing in Canada and the United States from 1832 to 1850, believed to have been erysipelas, but by some to have been diphtheria or dysentery. **T. fe′ver,** abdominal typhus, enteric fever, gastric fever; an acute febrile disease dependent upon entrance into the system of a specific microbe; it is attended by lesions of Peyer's patches, spleen, blood, and mesenteric glands, and accompanied by cerebral, abdominal, and thoracic symptoms. Toward the end of the first week rose-colored spots appear on the surface of the abdomen. It is not considered contagious in the ordinary sense, except so far as the excretions are concerned, the poison not being given off from the skin or in the breath, but in the fæces and urine. **T. fe′ver of In′dia,** cholera. **T. spine,** a painful condition of the spinal region after typhoid fever, which may be either neurotic or due to perispondylitis. **T. spots,** characteristic pale rose-red, slightly elevated papulæ, momentarily disappearing on pressure, appearing in typhoid fever about the seventh day after the patient takes to bed. **T. state,** t. condition. **T. tongue,** appearance of the tongue in enteric and typhus fevers; at first heavily coated in the centre, later becoming dry, brown, and fissured. **Walk′ing t.,** typhus ambulatorius.

**Typhoid′al.** Resembling typhoid fever or a typhoid state.

**Typhoidette′.** Mild form of typhoid fever.

**Typhomala′rial fe′ver.** Chickahominy fever. A fever once believed to be due to the combined action of the infection of typhoid and malarial fevers; now generally regarded as an anomalous form of typhoid fever or of malaria. The term Chickahominy was applied to it from the locality in which it prevailed during the Civil War in the United States.

**Typhoma′nia.** Subdelirium. Low, muttering delirium common in typhus and severe cases of typhoid fever.

**Typho′nia.** Typhomania. Coma vigil.

**Typhopneumo′nia.** Pneumonia with typhoid symptoms.

**Typhorube′oloid.** Typhus fever in which the cutaneous eruption is like that of rubeola.

**Typhosep′sis.** Typhoseptosis.

**Typhosepto′sis** (*typhos*, stupor, *sepsis*, putrefaction). Typhæmia.

**Typho′sis** (*typhos*, stupor). The typhous condition.

**Typho′sus** (*typhos*, stupor). Typhoid; typhous.

**Typhotoxin′.** $C_7H_{17}NO_2$. Ptomain obtained from cultures of typhoid bacilli. It has no specific action; isomeric with gadinin.

**Ty′phous.** Belonging or relating to typhus.

**Ty′phus fe′ver** (*typhos*, stupor). Putrid, jail, hospital, or ship fever, petechial, maculated, or spotted fever. Acute febrile disease dependent upon the entrance into the system of a specific microbe; characterized by high temperature, small, weak, but usually frequent pulse, with great prostration of strength and much cerebral disturbance; its duration is usually a fortnight to three weeks or longer. It is marked by lesions of the blood, but not of organs; is endemic, epidemic, and highly contagious. **T. abdomina′lis,** typhoid fever. **T. ambulato′rius,** typhoid fever in which subjective symptoms are so mild as to permit the patient to walk about until the course of the disease is somewhat advanced. **T. anthrac′icus,** plague. **T. aphthoide′us,** aphthæ. **T. bel′licus,** t. fever. **T. bengalen′sis,** cholera. **T. bubon′icus,** plague. **T. car′cerum,** typhus gravior. **T. castren′sis,** typhus gravior. **Cer′ebral t.,** cerebrospinal meningitis. **T. comato′sus,** typhus mitior. **T. commu′nis,** t. fever. **T. contagio′sus,** t. fever. **Convulsi′vo-cer′ebral t.,** electric chorea. **T. exanthemat′icus,** t. fever. **T. gangliona′ris abdomina′lis,** typhoid fever. **T. gra′vior,** t. fever. **T. gravis′simus,** plague. **T. hiber′nicus,** t. gravior. **T. ictero′des,** yellow fever. **T. intestina′lis,** typhoid fever. **T. le′vis** or **T. levis′simus,** light form of typhoid fever. **T. mit′ior,** typhoid fever. **T. morbillo′sus,** rubeola. **T. nervo′sus,** typhoid fever. **T. nos′tras,** t. fever. **T. pestilentia′lis,** plague. **T. pes′tis,** plague. **T. petechia′lis,** t. fever. **Puer′peral t.,** puerperal septicæmia. **T. recur′rens,** relapsing fever. **T. scarlati′nus,** scarlatina. **T. sid′erans,** violent and rapidly fatal typhus fever. **T. sim′plex,** typhus mitior. **T. sporad′icus,** a sporadic case of typhus fever. **Syn′copal t.,** cerebrospinal meningitis. **T. trop′icus,** yellow fever. **True t.,** typhus fever. **T. vesicula′ris,** pemphigus.

**Typ′ical.** Characterized by a particular type.

**Typo′ses.** See *Periodicity.*

**Ty′pus.** Type.

**Tyr′annism.** Morbid impulse to the exercise of cruelty, sometimes combined with sexual perversion—sadism.

**Tyr′be.** Agitation.

**Tyrein′** (*tyros*, cheese). Coagulated casein.

**Tyrem′esis** (*tyros*, cheese, *emesis*, vomiting). Vomiting of curdy matter.

**Tyr′ia.** Porrigo decalvans.

**Tyri′asis.** Lepra. Satyriasis.

**Tyrin′.** Casein.

**Ty′roid.** Cheesy.

**Tyro′ma.** Cheesy matter. Cheesy growth. Alopecia. Tuberculous tumor.

**Tyromato′sis.** Caseation, or the formation of cheesy matter.

**Tyrosin′.** Amido-acid, crystallizing in fine needles, usually in white, feathery masses, occurring as a result of pancreatic digestion or of decomposition of organic matter either by putrefaction or by acids. It has been found, like leucin, in typhoid fever and in acute yellow atrophy of the liver.

**Ty′rosinase.** An oxidizing ferment acting only on tyrosin, believed to be concerned in the production of many of the animal pigments.

**Tyro′sis** (*tyros*, cheese). Tyremesis; also the curdling of milk in the stomach.

**Tyrotem′esis** (*tyrotos*, made into cheese, *emesis*, vomiting). Vomiting of cheesy or curdy matter.

**Ty′rothrix** (*tyros*, cheese, *thrix*, hair). Genus of *Schizomycetes*, causing coagulation of milk and full development of cheese. Several bacilli, resembling Bacillus subtilis, are so named.

**Tyrotox′icon.** Ptomain occurring under certain conditions in cheese, milk, cream, and ice-cream. The symptoms of tyrotoxicon poisoning are those of acute gastroenteritis, with dilatation of the pupil, peculiar pricking or tingling sensation in the limbs, and dryness of the throat and mouth.

**Tyrotoxin′.** Diazobenzene hydroxide. Ptomain-like substance from cheese.

**Tyr′rell's fas′cia.** Portion of the rectovesical fascia lying between the prostate gland and rectum. **T.'s hook,** blunt hook for drawing out the iris in iridectomy.

**Ty′son's glands.** Small, sebaceous follicles secreting smegma, situated on the cervix and corona glandis of the penis and labia pudendi.

# U.

**U′beris a′pex** (apex of the mamma). Nipple.

**Ucambin′.** African arrow poison.

**Ud′der.** See *Mamma.*

**Uf′felmann′s test,** for hydrochloric acid in the stomach contents: A solution of ferric chloride and carbolic acid in water is decolorized by free hydrochloric acid, but turned yellow by lactic acid.

**Uht′hoff′s sign.** Oscillatory movements of the eyes in multiple cerebrospinal sclerosis.

**Ulæmorrha′gia.** Hemorrhage from the gums.

**Ulatroph′ia** (*oulon,* gum, *atrophia,* atrophy). Shrinking or falling away of the gums.

**Ul′cer** (Lat., *ulcus*). A sore; surface of granulations in the soft parts, of longer or shorter standing, and kept up by some local disease or constitutional cause. **A′den u.,** see *Beriberi.* **Am′putating u.,** ulceration encircling a limb and destroying the soft parts down to the bone. **An′amite u.,** obstinate phagedenic ulceration occurring in hot climates. **Athero′matous u.,** breaking down of a patch of atheroma in the inner wall of a blood-vessel. **Cal′lous u.,** ulcer situated on the lower half of the leg, having a slightly concave surface covered with flattened granulations, discharging scanty pus, and surrounded by an elevated ring of dense, indurated tissue. **Can′croid u.,** lupus. **Chiro′nian u.,** hard, callous ulcer, difficult of cure. **Co′chin Chi′na u.,** see *Cochin China.* **Cold u.,** a term applied by Mr. Paget to small, inflammatory ulcers occurring spontaneously at the extremities of the body, sometimes preceded by gangrenous spots, and resembling in some respects ulcerated chilblains. **Corro′ding u.,** rodent ulcer. **Cruveilhier′s′ u.,** ulcer of the stomach. **Del′hi u.,** see *Delhi.* **Eczem′atous u.,** chronic ulcer surrounded by an eczematous area of skin. **Endem′ic u.,** an ulcer peculiar to a certain locality or country, as Aden ulcer. **Ero′sive u. of the der′ma,** lupus. **Follic′ular u.,** one in which the destructive process starts from one of the follicles on the mucous membrane. **U. of foot, per′forating,** intractable form of ulceration, usually occupying the anterior part of the plantar surface of the foot, and leading to destructive disorganization of the neighboring bones and joints. **Fun′gous u.,** collection of granulations which bleed easily, projecting above the level of the surrounding skin, occasionally spreading out as a mushroom or cauliflower growth. **Gout′y u.,** ulcer, usually superficial, observed over gouty deposits. **Hemorrhag′ic u.,** ulceration characterized by occasional bleeding from its surface; it may be connected with a hemorrhagic diathesis or be an outlet for vicarious menstruation. **In′dolent u.,** callous u. **Inflamed′ u.,** an u. the granulations of which are at first red, later become dusky, and finally break down, forming a gray, ragged, sloughing area, discharging profusely pus and tissue-débris; the surrounding skin is red and inflamed, and there are great pain and systemic disturbance. **Ir′ritable u.,** neuralgic ulcer; an ulcer, usually occurring in the tibial region, characterized by intense pain and hyperæsthesia. **Ja′cob′s u.,** rodent ulcer. **Lu′poid u.,** rodent ulcer. **Malig′nant u.,** hospital gangrene. **Mar′jolin′s u.,** ulceration of scar tissue; see *Warty tumor.* **Œdem′atous u.,** ulcer having large, flabby granulations, apparently distended with serum, not infrequently detached in large masses by sloughing. **Pep′tic u.,** round ulcer of the stomach or duodenum, caused by the corroding action of the gastric juice on devitalized tissue. **Per′forating u.,** ulcer of the stomach or intestine eating through all the coats of the organ; mycetoma; p. ulcer of the foot. **Phageden′ic u.,** aggravated sloughing ulcer, having dark red edges, discharging ichorous pus containing shreds of dead tissue, extending rapidly and accompanied by severe constitutional symptoms of adynamic type. **Phleg′monous u.,** inflamed ulcer. **Pu′trid u.,** hospital gangrene. **Ro′dent u.,** lupoid or corroding ulcer; a destructive local cancerous affection, beginning as a dry wart, afterward ulcerating, becoming converted into an indolent sore, without granulation; when of extensive size it is accompanied with a fetid, purulent discharge. **Round u.,** perforating ulcer of the stomach or duodenum. **Scorbu′tic u.,** an ulcer or sore modified in its progress by the general scorbutic taint. **Senile′ u.,** a sluggish ulcer commonly seen on the dry, withered limbs of those who have senile degeneration of the arteries, etc. **Serpig′inous u.,** an ulcer extending in one direction while healing in another, thus creeping along the surface irregularly. **Sim′ple u.,** roundish or oval surface of small, uniform, cherry-red granulations, with gently sloping, moderately indurated edges, discharging a small quantity of thick yellow pus. **Slough′ing u.,** aggravated inflamed ulcer, rapidly spreading, and attended by destruction of visible portions of tissue, which are thrown off as offensive gray sloughs. **U. of stom′ach,** gastrelcosis, gastric ulcer; an ulcerated condition of the stomach wall, dependent on obstruction of the blood-vessels of that organ, usually occurring in the posterior wall of the pyloric portion; when perforation of the serous coat occurs it has the appearance of having been cut with a punch, hence it is sometimes called round ulcer. **Stru′mous u.,** chronic, painless ulcer, having œdematous granulations discharging thick, oily pus, occurring in a strumous diathesis. **Var′icose u.,** ulcer of the leg associated with the presence of varicose veins. **Wart′y u. of Mar′jolin,** see *Warty tumor of cicatrices.* **Weak u.,** œdematous ulcer. **Yem′en u.,** Aden ulcer.

**Ul′cera** (pl. of ulcus). Ulcers.

**Ul′cerate.** To break down into an ulcer.

**Ul′cerated** (*ulcero,* to make sore). In the state of an ulcer. Affected with ulcers.

**Ulcera′tion.** Superficial ulcer. Molecular death of a part.

**Ul′cerative.** Relating to ulceration.

**Ul′cerous** (*ulcus,* ulcer). Having the character of an ulcer. Affected with ulcers.

**Ul′cus.** Ulcer. **U. ambustifor′me,** chancroid having the appearance of a simple excoriation. **U. aton′icum,** rupia. **U. cancro′sum,** cancer; chancre. **U. cor′neæ ser′pens,** Saemisch′s ulcer, infecting ulcer; deep, sloughing ulcer, having a tendency to spread over the cornea. **U. cru′ris,** indolent ulcer of the leg. **U. dacryo′des,** weeping ulcer, or one from which a serous discharge exudes in droplets. **U. depas′cens,** phagedenic ulcer. **U. ex digestio′ne,** peptic ulcer. **U. du′rum,** chancre. **U. ero′dens,** lupus. **U. exe′dens,** rodent ulcer. **U. feri′num,** phagedenic ulcer. **U. fistulo′sum,** hypophora. **U. gra′ve,** mycetoma. **U. hyp′ulum,** ulcer healed at the top, but not at the bottom. **U. indura′tum,** chancre. **U. mol′le,** chancroid. **U. na′rium fœ′tens,** ozæna. **U. obam′bulans,** phagedenic ulcer. **U. phagedæ′nicum,** phagedenic ulcer. **U. p. co′lis,** phagedenic chancre. **U. p. corro′dens,** phagedenic corrosive or gangrenous ulcer of the vaginal portion of the uterus. **U. pulmo′num,** phthisis pulmonalis. **U. ro′dens cu′tis,** rodent ulcer. **U. rotun′dum,** round ulcer. **U. scorbu′ticum,** persistent ulcer occurring in scurvy. **U. ser′pens cor′neæ,** see *Keratitis.* **U. sim′plex,** chancroid. **U. sinuo′sum,** hypophora. **U.**

**syphilit'icum,** chancre. **U. syri'acum,** cynanche maligna. **U. tuberculo'sum,** lupus. **U. u'teri,** ulceration of the uterus; leucorrhœa. **U. vene'reum du'rum,** chancre. **U. ventric'uli,** ulcer of the stomach.

**Ul'cuscle** or **Ulcus'cule.** Small ulcer.

**Ulcus'cula** (pl. of ulcusculum) **præpu'tii.** Herpes præputii.

**Ulcus'culum** (dim. of *ulcus*, ulcer). Small ulcer.

**U'le** (*oule*, scar). Cicatrix.

**Ulegy'ria.** Convolutions in the cortex of the brain made irregular by cicatricial growth or formation.

**Ulerythe'ma.** Erythematous skin affection characterized by the formation of cicatrices. **U. acneifor'me,** acne necrotica. **U. centrif'ugum,** lupus erythematosus. **U. ophryog'enes,** form of ulerythema commencing at the eyebrows and later giving rise to alopecia; chronic form of the disease; the hair follicles are choked up with a hard plug, and the skin is erythematous. **U. sycosifor'me,** rare form of chronic folliculitis barbæ, frequently destroying the skin.

**Ulet'ic** (*oulon*, gums). Relating to the gums.

**U'lex europæ'us.** Common furse or gorse, a prickly shrub of Europe said to have diuretic principles.

**Ulexine'.** Alkaloid, having local anæsthetic properties, obtained from the seeds of Ulex europæus. Also has a tonic effect upon the nerves, muscles, and respiration, and is a diuretic; antidote to strychnine. Cytisine.

**Uliginous,** u-lij'in-us (*uligo*, moisture). Relating to or growing in a marshy soil.

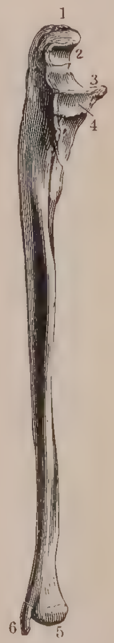
**Uli'tis** (*oulon*, gum). Inflammation of the gums. **U. sep'tica,** cancer aquaticus.

**Ullu'co.** Tropæolum tuberosum.

**Ulma'ria** or **U. palus'tris.** Spiræa ulmaria.

**Ul'mus.** Common elm, ord. *Ulmaceæ*. The inner bark has a bitter and mucilaginous taste; tonic, alterative, and diuretic, and has been used chiefly in leprosy and other cutaneous affections. **U. ala'ta,** Lynn wahoo; the bark of this root has been used successfully as a cataplasm in phlegmonous inflammation. **U. america'na,** rough-leaved, red, or slippery elm. **U. campes'tris,** ulmus. **U. ful'va,** the inner bark, *ulmus* (Ph. U. S.), slippery elm, is highly mucilaginous, and is used in the form of mucilage as a vehicle for disagreeable medicines and as a poultice; may be employed, also, as a tent for dilating openings or passages. **U. gla'bra,** ulmus. **U. mon-ta'na,** ulmus. **U. un'da,** ulmus. **U. ru'bra,** U. fulva. **U. sati'va,** ulmus. **U. sca'bra,** ulmus.

**Ul'na.** Cubitus; inner bone of the forearm which forms the prominence of the elbow. Its upper extremity has two eminences, olecranon and coronoid, which are separated from each other by the greater sigmoid or semilunar fossa or olecranoid cavity. At the base of the coronoid process is the tubercle of the ulna for the insertion of the brachialis internus. On the outside of this extremity is the lesser sigmoid cavity, which articulates with the head of the radius. The inferior extremity of the ulna has a pointed process called the styloid process. The ulna is articulated with the humerus and radius, and, mediately, with the cuneiform bone.



Anterior view of ulna of right side. 1, olecranon process; 2, greater sigmoid cavity; 3, coronoid process; 4, lesser sigmoid cavity; 5, carpal surface; 6, styloid process.

**Ul'nad.** In a direction toward the ulna.

**Ul'nar.** Cubital. Relating to the ulna. **U. ar'tery,** the larger of the two subdivisions of the brachial artery, commencing immediately below the bend of the elbow, running along the ulnar side of the arm to the wrist, and passing across the palm of the hand to form the superficial palmar arch. The anterior and posterior ulnar recurrent, anterior and posterior interosseous and muscular arteries, are branches of the ulnar given off in the forearm. **U. as'pect,** an aspect toward the side on which the ulna is situated. **U. glands,** lymphatic glands situated in front of the elbow and above the internal condyle of the humerus; usually enlarged in syphilis. **U. groove,** furrow between the inner condyle of the humerus and the olecranon process for passage of the ulnar nerve. **U. nerve,** branch of the brachial plexus, from which it arises in common with the inner head of the median nerve; distributed to the muscles and integument of the forearm and hand. **U. recur'rent ar'tery,** see *Ulnar*. **U. veins** are two veins, anterior and posterior, collecting blood from the forearm.

**Ulna'ris.** Ulnar; cubital. **U. exter'nus,** see *Cubital muscles*. **U. grac'ilis,** palmaris longus. **U. inter'nus,** see *Cubital muscles*. **U. quin'ti,** extensor carpi ulnaris, having a narrow slip attached to the little finger.

**Ulnocar'pal.** Relating to both ulna and carpus.

**Ulnora'dial.** Relating to both ulna and radius.

**Ulocace,** u-lok'as-e (*oulon*, gum, *kakos*, evil). Cancer aquaticus; stomacace.

**Ulocarcino'ma.** Carcinoma of the gums.

**U'loid** (*oule*, a scar). Like a cicatrix or scar. **U. cica'trix,** appearance of the skin after degenerative changes in lupus and syphiloderma; resulting from subcutaneous degeneration of tissues.

**Ulon'cus** (*oulon*, gum, *onkos*, tumor). Swelling or tumor of the gums; epulis.

**Ulorrha'gia** (*oulon*, gum, *rhegnymi*, to break forth). Profuse bleeding from the gums. Ulæmorrhagia.

**Ulorrhœ'a** (*oulon*, gum, *rheo*, to flow). Bleeding from the gums.

**Ulo'sis.** Cicatrization.

**Ulo'tic.** Cicatrizing.

**Ulot'richus** (*oulos*, fleecy, *thrix*, hair). Having woolly hair.

**Ul'timate anal'ysis.** Detection and estimation of ultimate elements entering into the composition of an organic compound. **U. el'ements,** elements not further divisible. **U. prin'ciple,** ultimate element.

**Ultiminister'nal.** Sixth or last bony portion of the sternum, sometimes called *ensisternal*.

**Ul'timum mo'riens** (last dying). A term given to the part of the economy which dies last. The muscular contractility of the right auricle is said to be the last to disappear. See *Punctum saliens*.

**Ultrabrachyceph'aly.** Brachycephalism, or egg-shaped head, in which the cephalic index is more than 90°.

**Ultradolichoceph'aly.** Dolichocephalism in which the cephalic index is less than 64°.

**Ultraquinine'.** Homoquinine.

**Ultz'mann's test for bile.** See *Urine, examination of* (detection of bile).

**U'lum.** Gum.

**Ul'va cris'pa.** Fucus crispus. **U. latis'sima,** broad green laver, green sloke, oyster green; ord. *Algæ*; used for food. **U. umbilica'lis,** laciniated purple laver of Great Britain, is pickled and sold as laver; antiscorbutic.

**Ulvi'na ace'ti** (Kützing). Bacillus aceti.

**Ulyp'tol.** Antiseptic preparation composed of salicylic and carbolic acids and eucalyptus.

**Um'bel, yel'low.** Cypripedium luteum.

**Umbellula'ria califor'nica.** California laurel; C.

spice tree, the leaves of which are said to relieve neuralgia, colic, and diarrhœa.

**Umbil′ical.** Relating to the umbilicus or navel. **U. ar′teries,** allantoic or hypogastric arteries; fetal structures only, developed early as branches of the internal iliac; they carry blood from the embryo to the allantois, and in animals developed in a uterus to the placenta; they possess valves. They exist only in the fœtus; they clear the umbilical ring and proceed to the placenta, to which they carry the residuum of the blood sent to the fœtus by the umbilical vein. The portion of the artery within the abdomen is called the *hypogastric artery;* the portion external to that cavity, the *umbilical artery.* As soon as respiration is established the blood ceases to pass by the umbilical arteries, which become obliterated as well as the vein, and are transformed into two strong, ligamentous cords—the vein forming the round ligament or ligamentum rotundum of the liver. **U. circula′tion,** allantoic circulation; the second embryonic circulation, consisting of two umbilical veins and two arteries, carrying blood to and from the allantoic sac on the placenta; in the latter case the chief circulation of the embryo. **U. cord,** funiculus umbilicalis; an embryonic structure joining the placenta with the umbilicus of the fœtus, developed about the twentieth to thirtieth day, consisting of the allantois stalk and its vessels, two umbilical arteries, the umbilical vein, the atrophied yolk-stalk; a layer of the amnion and mucous tissue (jelly of the latter) form the covering. Length (human), 20–21 inches; diameter, $\frac{1}{3}$–$\frac{1}{2}$ inch. The vessels are tortuous; the arteries possess valves. **U. duct,** omphalomesenteric duct. **U. fis′sure,** portion of the longitudinal fissure of the liver in front of the transverse fissure; it contains the umbilical vein. **U. re′gion,** mesogastrium; middle region of the abdomen, in which the umbilicus is placed. In the umbilical region are the omentum, the jejunum, and the greater part of the mesentery, the aorta, vena cava, the trunks of the renal arteries and veins, the origin of the spermatic arteries, etc. **U. ring,** fibrous ring surrounding the aperture of the umbilicus, and through which umbilical hernia occurs in children. **U. souf′fle,** sibilant sound heard synchronously with the beat of the fetal heart, and believed to have its origin in the umbilical cord. **U. stalk,** a structure formed early in fetal life, being composed of the embryonic layers on the ventral side of the embryo, containing the beginning of the allantoic or yolk-sac; further growth and construction form the umbilical cord. **U. veins,** fetal vessels carrying blood to the embryo from the allantois or placenta. The right vein soon atrophies. At first they empty into the vitelline vein; later the left enters the portal and sends a branch, the ductus venosus, to the left hepatic. In the adult the vein, become a fibrous cord, forms the round ligament of the liver. **U. ves′icle** or **yolk-sac,** a sac formed in early fetal life containing the yolk; the splanchnopleuric layers of the head, tail, and lateral folds grow around the yolk, constrict near the ventral side of the embryo, and form this sac. It is greatly developed in oviparous ova. The vitelline circulation develops in the outer wall of this sac. **U. ves′sels,** these include two arteries and the umbilical vein; the umbilical vein arises from the placenta and terminates at the fissure on the inferior surface of the liver of the fœtus, to which it conveys the blood necessary for its nutrition.

**Umbilica′lis.** Umbilical.

**Umbil′icated.** Depressed in the centre like the umbilicus, as an umbilicated pustule. The term *umbilication* is applied to such a depression.

**Umbilica′tion.** Depression in the centre of a prominence, as that in the variolous pock.

**Umbili′cus.** The umbilic or navel. Round cicatrix, about the median line of the abdomen, corresponding to an aperture in the fœtus, affording passage to the vessels of the umbilical cord. **U. mari′nus,** submarine production found on rocks and shells in the south of France; reputed to be anthelmintic and diuretic. **Poste′rior u.,** pilonidal sinus.

**Um′bo.** Deepest part of the arched membrana tympani, corresponding to the termination of the handle of the malleus.

**Umbras′copy** (badly compounded from the Latin *umbra,* shade, and Greek *skopeo,* to see). Skiascopy.

**Umbrel′la tree.** Magnolia tripetala.

**Unavoid′able hem′orrhage.** Hemorrhage from placenta prævia.

**Unbow′elling.** Operation of taking out the bowels.

**Unca′ria gam′bir.** Nauclea gambir.

**Un′cas, In′dian.** Veratrum viride.

**Un′cia.** Ounce.

**Un′ciform** (*uncus,* hook, *forma,* shape). Having the shape of a hook. **U. bone,** fourth bone of the second row of the carpus; inward and forward is the unciform process, giving attachment to the annular ligament of the carpus; it is articulated with the os semilunare, os magnum, os cuneiforme, and the fourth and fifth metacarpal bones. **U. em′inence,** hippocampus minor. **U. fascic′ulus,** this connects the frontal and temporal lobes. **U. pro′cess,** great process of the ethmoid; hook-like lamina of bone projecting downward and backward immediately beneath the os planum, serving to close the upper part of the orifice of the antrum.

**Uncina′ria.** A genus of plants, ord. *Rubiaceæ.* Also a genus of nematoid worms, Ankylostoma or Dochmius. **U. america′na,** a species, parasitic in man, found in Florida, Cuba, and elsewhere in the tropics and subtropics of America; causes symptoms of profound anæmia. **U. duodena′lis,** Ankylostoma duodenale.

**Uncinari′asis.** Uncinariosis.

**Uncinario′sis.** Ankylostomiasis; anæmia resulting from the constant loss of blood caused by the presence of uncinaria in the intestine.

**Un′cinate.** Unciform. **U. gy′rus, U. lobe,** or **U. convolu′tion,** anterior inferior termination of the gyrus fornicatus extending to the fissure of Sylvius, being bounded above by the dentate fissure, and separated below from the temporosphenoidal lobe by the collateral fissure; terminates at the anterior extremity in a hook-like process termed the uncus or crotchet.

**Uncina′tum.** Unciform bone.

**Un′cinus.** Hook.

**Uncipres′sure** or **Uncipres′sion** (*uncus,* a hook, *premo,* to press). Compression of an artery by means of a hook to control hemorrhage.

**Uncon′scious.** Not conscious; without cerebral appreciation, or occurring without such appreciation, as an unconscious movement in unconscious cerebration, so called.

**Uncon′sciousness.** Condition of suspension of sensibility and temporary abolition of reflexes, occurring as a symptom of apoplexy, sunstroke, etc.

**Unc′tion** (*unguo,* to anoint). Inunction.

**Unctuos′itas elephan′tina.** Increased secretion of sebaceous matter in the congestive stage of elephantiasis Græcorum.

**Unc′tuous.** Fatty; greasy.

**Un′cus.** Hook. **U. gy′ri fornica′ti,** uncinate gyrus.

**Un′dercut.** Depression made in tooth-substance to ensure retention of a filling.

**Underhung′.** Having a projecting lower jaw.

**Undim′ia.** Tumor filled with a gelatinous matter like the white of an egg.

**Undo′sus** (*unda,* wave). Undulatory, as the pulse of adynamia.

**Un′dulant.** Waving. **U. fe′ver,** Malta fever.

**Undula′tion** (*unda,* wave). Fluctuation; propagation in waves.

**Un′dulatory.** Moving in undulations or waves, as light, heat, and electricity.

**U′nedo.** Arbutus unedo. **U. papyra′cea,** Arbutus unedo.

**Un′gual** or **Un′gueal** (*unguis,* nail). Belonging or relating to the nails. **U. bone,** lacrymal bone. **U. fur′row,** transverse groove in the nail from loss of substance—evidence of a cachectic condition. **U. ma′trix,** see *Nail.* **U. pha′lanx,** terminal bones of the fingers and toes.

**Un′guent.** Ointment.

**Unguenta′ria.** See *Myristica moschata.*

**Unguen′tum** (*unguo*, to anoint). Unction, salve, ointment. Ointments are topical applications of a consistence more or less analogous to that of lard. Unguentum (U. S.), unguentum simplex, simple ointment, contains lard 80, and white wax 20. Ointments are of less consistence than cerates, although the terms are often used indiscriminately. The following are the official (Ph. U. S. and Br.) and other important unguenta: **U. a′cidi bo′rici** (Br.), contains 10 per cent. boric acid. **U. a. carbol′ici** (U. S.), contains 5 per cent.; (Br.) contains 4 per cent. carbolic acid. **U. a. salicyl′ici** (Br.), contains 2 per cent. salicylic acid. **U. a. tan′nici** (U. S.), contains 20 per cent. tannic acid. **U. aconiti′næ** (Br.), contains 2 per cent. of aconitine. **U. ad′ipis,** u. ceræ. **U. adipoce′ræ ceto′rum,** ceratum cetacei. **U. ægypti′acum,** linimentum æruginis. **U. Ægyp′tium al′bum,** ointment of lilies and aromatic plants. **U. æru′ginis,** u. subacetatis cupri. **U. alabas′trinum,** see *Alabaster.* **U. al′bum,** unguentum cetacei. **U. al′bum resol′vens,** linimentum ammoniæ fortius. **U. de althæ′â,** marshmallow ointment. **U. antimo′nii** (formerly in the Ph. Br.), antimonial ointment, contains 20 per cent. tartar emetic. If a drachm of this ointment be rubbed upon any part night and morning it will excite in a few days a painful pustular eruption; hence it is employed as a counterirritant. This method of employing the tartrate of antimony and potassium as a revellent is at times called *stibiodermic.* **U. a′quæ ro′sæ** (U. S. and Br.), ointment of rose-water, cold cream, contains expressed oil of almond, spermaceti, white wax, rose-water, and borax. **U. atropi′næ** (Br.), contains 2 per cent. of atropine. **U. belladon′næ** (U. S. and Br.), contains 10 per cent. of the alcoholic extract of belladonna leaves. **U. benzo′ini,** benzoated lard. **U. calami′næ,** Turner's cerate, contains 20 per cent. prepared calamine. **U. canthar′idis** (Br.), blistering salve, contains 10 per cent. cantharis. **U. cap′sici** (Br.), contains about 20 per cent. capsicum. **U. ceta′cei** (Br.), spermaceti ointment, contains 20 per cent. spermaceti. **U. chrysarobi′ni** (U. S.), contains 5 per cent.; (Br.) contains 4 per cent. chrysarobin. **U. citri′num,** u. hydrargyri nitratis. **U. cocai′næ** (Br.), contains 4 per cent. cocaine. **U. coni′i** (Br.), contains hemlock juice 88, evaporated to 11, in wool fat 33. **U. creoso′ti** (Br.), contains 10 per cent. creosote. **U. Credé,** colloidal silver 15, distilled water 5, white wax 10, benzoinated lard 70; antiseptic. **U. diach′ylon** (U. S.) diachylon ointment, contains 50 per cent. lead plaster. **U. diapomphol′ygos,** unguentum oxidi zinci impuri. **U. el′emi,** ointment of elemi (elemi, ℥iv; simple ointment, ℥j; Ph. Br.); use same as the next. **U. el′emi compos′itum,** compound ointment of elemi, balsam of Arcæus (elemi, ℔j; terebinthinæ vulgaris, ℥x; sevi præparati, ℔j; olei olivæ, f℥ij); stimulant and digestive; to keep open issues, etc. **U. epispas′ticum for′tius,** cerate of cantharides. **U. e. mi′tius,** unguentum lyttæ. **U. eucalyp′ti** (Br.), contains 10 per cent. oil of eucalyptus. **U. gal′læ** (U. S. and Br.), nutgall ointment, contains 20 per cent. of nutgall. **U. g. cum o′pio** (Br.), compound ointment of galls, contains 7½ per cent. of opium in nutgall ointment. **U. glyceri′ni plum′bi subaceta′tis** (Br.), contains 20 per cent. glycerin of subacetate of lead. **U. gynocar′diæ** (Br.), contains 25 per cent. chaulmoogra oil. **U. hamamel′idis** (Br.), witch-hazel ointment, contains 10 per cent. liquid extract of witch-hazel in wool fat. **U. hydrar′gyri** (U. S. and Br.), mercurial ointment, Neapolitan ointment, blue ointment, contains 50 per cent. metallic mercury. **U. h. ammonia′ti** (U. S. and Br.), contains 10 per cent. ammoniated mercury. **U. h. compos′itum** (Br.), contains metallic mercury 40 per cent., camphor 10 per cent. **U. h. io′didi ru′bri** (Br.), ointment of red iodide of mercury, contains 4 per cent. **U. h. nitra′tis** (U. S. and Br.), citrine ointment; metallic mercury 7 per cent., nitric acid 17.5 per cent., in lard and olive oil. **U. h. n. dilu′tum** (Br.), contains 20 per cent. nitrate of mercury ointment. **U. h. olea′tis** (Br.), contains 25 per cent. oleate of mercury. **U. h. ox′idi fla′vi** (U. S. and Br.), contains 10 per cent. yellow mercuric oxide; (Br.) contains 2 per cent.; the oxide is perfectly amorphous, without any crystalline grains, and is therefore adapted for application to the conjunctiva. **U. h. o. ru′bri** (U. S. and Br.), contains 10 per cent. red mercuric oxide. **U. h. subchlo′ridi** (Br.), calomel ointment, contains 10 per cent. mercurous chloride. **U. i′odi** (U. S.), contains 4 per cent. iodine and 1 per cent. potassium iodide; (Br.) contains 4 per cent. of each. **U. iodofor′mi** (U. S. and Br.), contains 10 per cent. iodoform. **U. mylab′ridis** (Br.), contains 10 per cent.; substitute for u. cantharidis. **U. myrobal′ani** (Br.), contains 25 per cent.; a substitute for nutgall ointment. **U. m. cum o′pio** (Br.), contains opium 7½ per cent. in ointment of myrobalanus. **U. paraffi′ni** (Br.), a mixture of paraffin wax (hard) 3, and vaselin (soft) 7. **U. pi′cis liq′uidæ** (U. S.), tar ointment, contains 50 per cent.; (Br.) about 70 per cent. **U. plum′bi aceta′tis** (Br.), contains 4 per cent. in paraffin ointment. **U. p. carbona′tis** (U. S. and Br.), contains 10 per cent. carbonate of lead. **U. p. io′didi** (U. S. and Br.), contains 10 per cent. iodide of lead. **U. potas′sii io′didi** (U. S.), contains 12 per cent. of potassium iodide and 1 per cent. of sodium hypophosphite; (Br.) 10 per cent. **U. staphisa′griæ** (Br.), ointment of stavesacre, contains about 10 per cent. **U. stramo′nii** (U. S.), contains 10 per cent. extract of stramonium seed. **U. sul′phuris** (U. S.), contains 30 per cent. washed sulphur; (Br.) 10 per cent. **U. sul′phuris io′didi** (Br.) contains 4 per cent. iodide of sulphur. **U. terebin′thinæ,** ointment of turpentine; contains about 50 per cent. **U. veratri′næ** (U. S.), contains 4 per cent. veratrine; (Br.) 2 per cent. **U. zin′ci** (Br.), contains 15 per cent. oxide of zinc. **U. z. olea′ti** (Br.), contains 50 per cent. zinc oleate in vaseline. **U. z. ox′idi** (U. S.), contains 20 per cent. oxide of zinc.

**Un′gues adun′ci** (hooked nails). See *Onychogryphosis.* **U. fibro′si,** condition of the nails in which they appear to have a fibrous structure.

**Unguic′ulate** (*unguis*, claw). Resembling a claw or hook.

**Un′guinal.** Relating to a nail or the nails.

**Un′guis** (nail). Hippocampus minor. Nail. Onyx. Pterygion. **U. a′vis,** hippocampus minor. **U. involu′tus,** onyxis. **U. odora′tus,** blatta bysantia. **U. os,** lacrymal bone, bone situated at the anterior and inner part of the orbit; it aids in the formation of the lacrymal gutter and the nasal duct.

**Un′gula.** A hoof. **U. caballi′na,** tussilago.

**Un′gulæ palpebra′rum** (hoofs of the eyelids). The tarsal cartilages.

**Un′gulate** (*ungula*, a hoof). Having hoofs; a term applied to animals so constituted, as the horse.

**Unhealth′y.** Sickly.

**Uniax′ial.** Having one axis, or developed along a single axis.

**Unicel′lular.** One-celled.

**U′nicism.** The doctrine that there is but one venereal poison.

**U′nicist.** One who denies the existence of more than one specific virus, regarding all the venereal diseases as manifestations of but one poison; opposed to dualist.

**U′nicorn** (*unus*, one, *cornu*, horn). Having a single horn or horn-like process. **U. root,** Aletris farinosa; Chamælirium luteum. **U. u′terus,** uterus having but one cornu, usually from atrophy of a Müller's duct.

**Unicus′pid.** A tooth having a single cusp.

**U′niform.** Having one definite shape. Homogeneous.

**Unigrav′ida.** Pregnant for the first time.

**Unilat′eral.** Relating to one side.

**Unilo′bar.** Having only one lobe.

**Uniloc′ular** (*unus*, one, *loculus*, cell). Having one cavity or compartment; as bilocular means having two compartments; multilocular, having many compartments.

**Uninu′clear** or **Uninu′cleated.** Having only one nucleus.

**Unioc′ular.** Relating to or having only one eye.

**Unioc′ulus** (*unus*, one, *oculus*, eye). Having only one eye; cyclops; monoculus.

**U′nion.** Healing. **U. by first** and **sec′ond inten′tion,** see *Intention.*

**Unio′val** (*ovum*, egg). Having one egg.

**Unip′ara.** Woman giving birth to her first child.

**Unip′arous** or **Unipa′riens** (*unus*, one, *pario*, to bring forth). Producing one child at a birth.

**Unipo′lar** (*unus*, one, *polus*, pole). Having a single pole, said of a nerve-cell; opposed to bipolar or multipolar.

**Unis′ema deltifo′lia.** Shovel pickerel-weed, pond shovel, shovel-leaf, water plantain. Indigenous aquatic plant; root is emollient and astringent.

**Unisep′tate.** Having one septum.

**Unisex′ual.** Of one sex, as distinguished from hermaphrodite.

**U′nit.** A single thing. A standard of measurement. **Antitoxin′ u.,** immunizing u. **U. of elec-tric′ity,** the unit quantities in electricity are expressed in terms of the units of length, mass, and time, and for scientific purposes these are taken as one centimetre, one gramme, and one second, respectively (Steavenson and Jones). Thus the unit *of velocity* is one centimetre per second; the *unit of acceleration,* one unit of velocity, sometimes called a vel per second; that is, a velocity of one centimetre per second added per second. The *unit of force* is that force which when acting on a mass of one gramme gives it unit acceleration, or which when acting on one gramme for one second gives it a velocity of one centimetre per second, and is called one *dyne.* The *electrostatic unit of quantity* is that quantity which when placed at one centimetre from an equal and similar quantity repels it with the force of one dyne. This system is called the centimetre-gramme-second system of units (C. G. S.). For practical calculation and use these units are not of a convenient size, those of electromotive force and of resistance being inconveniently small and that of the current inconveniently large. A system of *practical units* has therefore been derived from these, as follows: *U. of capacity,* that capacity which would require one coulomb to change it to one volt. See *U. of quantity.* One one-thousand-millionth of the absolute unit of capacity is called one *farad. U. of current,* the current which is given by an electromotive force of one volt acting through a resistance of one ohm; that is, one-tenth of an absolute unit is called one *ampère* (formerly known as one weber). *U. of electromotive force,* the practical unit consists of one hundred million absolute units, and is called the *volt;* it is a little less than the electromotive force of one Daniell's cell. *U. of quantity,* one ampère for one second carries one coulomb of electricity past any point in the circuit, a *coulomb* being the quantity of electricity that passes in a second in a conductor which has the resistance of one ohm with one volt of electromotive force. Another unit of electricity is the quantity which would be carried by one ampère in an hour. This is called an ampère-hour and is equal to 3600 coulombs. *U. of resistance,* one thousand million absolute units is called the *ohm.* The Paris Congress of Electricians in 1884 defined a unit of resistance, to be called a *legal ohm,* represented by the resistance of a column of pure mercury at 0° C., one square millimetre in section, and 106 centimetres long; it is less than the true ohm by about 0.3 per cent. As these units are inconveniently great or small at times, certain prefixes are used to the names to denote multiples or submultiples of these quantities. Thus a *megohm* is one million ohms; a *microvolt* is one-millionth of a volt; a *microfarad* one-millionth of a farad; a *milliampère* is one-thousandth of an ampère, and is the unit of current used in medicine. **U. of heat,** *calorie,* the amount of heat required to raise the temperature of 1 kilogramme of water from 0° C. to 1° C.; a small calorie is the amount of heat required to raise one gramme of water from 0° to 1° C. The former English unit was the amount of heat that would raise one pound of water from 50° to 51° F., and was called the pound-degree. **Im′munizing u.,** unit of strength of an antitoxin, the amount of antitoxin which protects a guinea-pig weighing 250 grammes from one hundred times the fatal dose of toxin of standard strength. **Ther′mal u.,** u. of heat. **Tox′ic u.,** or **U. of u′rinary toxic′ity,** is the amount of urine which when introduced into the circulation is sufficient to kill a rabbit weighing one kilogramme. (For other units, see *Weights* and *Measures.*)

**U′nitary.** Relating to or having the nature of a unit. Also applied to monstrosities having the organs of a single individual. **U. the′ory,** the theory that all disease is single in its nature.

**Uni′ting ban′dage.** A bandage for bringing the edges of a wound into approximation.

**Univ′alent.** Term applied to a radical which replaces in combination one atom of hydrogen.

**Univer′sal joint.** Ball-and-socket joint.

**Univ′ocal genera′tion.** See *Generation.*

**Un′na's dermato′sis.** Seborrhœic eczema. **U.'s lay′er,** stratum granulosum; stratum or layer of epidermal cells above the rete mucosum. **U.'s pap′illary hair,** hair and hair follicle combined. **U.'s paste,** a mixture of zinc oxide in mucilage and glycerin. **U.'s plas′ma cells,** rhombic cells probably derived from lymphocytes. **U.'s plas′ter mulls,** squares of muslin spread with medicated plaster.

**Unoc′ulus.** Having one eye; cyclops; monoculus.

**Uno′na polycar′pa.** Cœlocline polycarpa.

**Unor′ganized.** Inorganic. Not organized.

**Unpo′larizable.** Not capable of polarization; some electrodes, for example.

**Unpo′larized.** Not polarized; said of light.

**Un′schuld's sign.** An early symptom of diabetes, being a disposition to cramps in the calf of the leg.

**Unsex′.** To spay.

**Unsound′.** Diseased; infirm; sickly.

**Unsound′ness of mind.** Disordered mental condition incapacitating the individual for management of his affairs.

**Unstri′ated** or **Unstriped′ mus′cular fi′bre.** See *Muscular fibre.*

**Unto′mool.** Tylophœa asthmatica.

**Unwell′.** Not well; menstruating.

**U′pas.** In the archipelagoes of Molucca and Sunda, a vegetable arrow poison. The tree producing it is said to be the Antiaris or Ipo toxicaria. Another species of upas, *U. tieuté, tshettik* or *tjettek,* is the product of Strychnos tieuté, Upas antiar, like corroval and vao, South American arrow poisons paralyzing the heart, while U. tieuté causes the most violent convulsions.

**Up′land bone′set.** Eupatorium sesilifolium. **U. su′mach,** Rhus glabra.

**Up′per po′lar circle.** Upper third of the uterine cavity.

**Urachal,** u′rak-al (*urachus*). Relating to the urachus. **U. fold,** duplicature of the peritoneum surrounding the urachus. **U. fos′sa,** a depression in the posterior surface of the anterior abdominal wall between the urachus and the hypogastric artery.

**Urachus,** u′rak-us (*ouron*, urine, *echo*, to contain). Remains of a tubular canal existing in the embryo and connecting the cavity of the bladder with the allantois, passing from the bladder to the umbilicus. In the adult it exists as a fibromuscular cord extending from the apex of the bladder to the umbilicus, *ligamentum suspensorium urachi* or *vesicæ.*

**Uracra′tia** (*ouron*, urine, *akratos*, powerless). Enuresis.

**Uræ′mia** (*ouron*, urine, *haima*, blood). Certain morbid phenomena, implicating the nervous centres more especially, due to retention in the blood of excrementitious substances which are normally excreted by the kidneys. The symptoms are mental disturbance, convulsions, coma, headache, nausea, dyspnœa, and disordered vision.

**Uræ′mic.** Relating to uræmia.

**U′ral** or **Ura′lium.** $C_5H_8NO_3Cl_3$. Bitter, crystalline substance, chloral-urethane, hypnotic. Dose, gr. xxx (2.0).

**Ura′li.** Curare.

**U′ramil.** $C_4H_5N_3O_3$. Crystalline substance derived from alloxanthin and chloride of ammonium.

**Uram′ine.** $CN_3H_5$. Guanidine.

**Uranal′ysis.** Analysis of the urine.

**Uraniscochas′ma.** Cleft palate.

**Uranisconi′tis** (*ouraniskos*, palate). Inflammation of the palate.

**Uranis′coplasty.** Operation for repair of fissure of the hard palate.

**Uraniscor′rhaphy** (*ouraniskos*, palate, *rhaphe*, suture). Staphylorrhaphy.

**Uranis′cus** (*ouraniskos*, a canopy). Palate.

**U′ranism.** Sexual perversion; uruism.

**Ura′nium.** A rare metal, symbol U, obtained from pitchblende; it possesses the property of radioactivity. **U. ac′etate,** yellow, soluble salt, cautiously employed in coryza, dry, in solution, or douche. **U. ammo′nium flu′oride,** yellow powder employed in fluoroscopy. **U. ni′trate,** in yellow, soluble crystals; employed in diabetes; dose, gr. j (0.065); is also used in spray form as an astringent in throat affections.

**Uranoma′nia** (*ouranos*, heaven). Megalomania, or delirium of grandeur, referring to a heavenly origin, etc.

**U′ranoplasty.** Uraniscoplasty.

**Uranorrhaph′ia.** Staphylorrhaphy.

**Uranoschisis,** u-ran-os′kis-is (*ouraniskos*, palate, *schisis*, separation). Cleft palate.

**Uran′oschism.** Cleft palate.

**U′ranyl ammo′nium flu′oride.** Uranium ammonium fluoride.

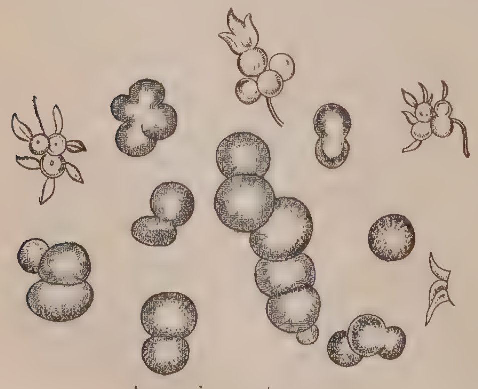
**Uraposte′ma** (*ouron*, urine, *apostema*, abscess). Tumefaction caused by the escape of urine; abscess containing urine.

**Ura′ri.** Curare.

**U′rase.** Ferment, caused by microbes, decomposing urea, producing ammonium carbonate and hippuric acid, from which result glycocoll and benzoic acid.

**Uratæ′mia.** Presence of urates in the blood.

**U′rate.** Lithate. A generic name for salts formed by the combination of uric or lithic acid with different bases. Urate or lithate of sodium, for example, is found in arthritic and certain urinary concretions; urate or lithate of ammonium in certain urinary deposits. The urate of ammonium, ammonii uras, has been used externally as an ointment in chronic cutaneous affections. The urate of quinine, a soluble yellow salt, has been employed in intermittents. See *Calculi, urinary*, and *Urine, examination of*.



Ammonium urate crystals.

**Urat′ic.** Relating to or composed of urates, as *u. calculi* or *u. degeneration*. **U. diath′esis,** gouty diathesis.

**Urato′ma.** A concretion formed by urates.

**Urato′sis.** Deposition of crystalline urates in the tissues or fluids of the body.

**Uratu′ria.** Condition of excess of urates in the urine.

**U′rea** (*ouron*). A white, pearly, brilliant substance, in transparent plates, inodorous, and of a cool taste; very soluble in water; deliquescent, and soluble in alcohol. A carbamide, $COH_4N_2$, carrying off the largest quantity of all the nitrogen taken in the food. Principal solid constituent of urine, and also found in several animal fluids, as chyle, blood, lymph, etc., and in muscular tissue. **U. en′zyme** or **fer′ment,** urase. **U. quin′ate,** urol. **U. sal′icylate,** ursal.

**U′real.** Relating or appertaining to urea.

**Uream′eter.** Apparatus for estimating amount of urea in urine. The process is termed *uream′etry*.

**U′rease.** Urase.

**Urec′chysis** (*ouron*, urine, *ekchysis*, effusion). Effusion of urine into the areolar tissue.

**Urechi′tes suberec′ta.** Savannah flower, yellow nightshade. Poisonous plant indigenous to Jamaica, with effects similar to those of strophanthus.

**Urechitin′** and **urechitoxin′.** Poisonous glucosides from the leaves of Urechites suberecta, recommended as an antidote to curare.

**Ure′do** (*uro*, to burn). Urticaria.

**U′reide.** Urea in which an acid radical replaces the hydrogen.

**Urelco′sis** (*ouron*, urine, *helkos*, ulcer). Ulcerative urethritis.

**U′rens** (*uro*, to burn). Caustic.

**Ureom′eter.** Ureameter.

**Ureorrhœ′a** (*ouron*, urine, *rheo*, to flow). Diabetes.

**Urerythrin′.** Uroerythrin.

**Uresiæsthe′sis** (*ouresis*, micturition, *aisthesis*, feeling). The desire to pass water.

**Ure′sis** (*ouresis*). Micturition.

**Ure′ter.** A cylindrical, fibromuscular tube, one on each side of the body, sixteen to eighteen inches in length, which conveys the urine from the kidney to the bladder. It extends obliquely between the pelvis of the kidney and the *bas-fond* of the bladder, into which it opens. It enters the bladder at the posterior angle of the trigonum vesicale.

**Ure′teral.** Relating to the ureter.

**Ureteral′gia** (*algos*, pain). Pain in the course of the ureter.

**Ureterec′tomy.** Excision of the ureter.

**Ureter′ic.** Relating to the ureter.

**Ureteri′tis.** Inflammation of the ureter.

**Ureterocystoncos′tomy.** Ureterocystostomy.

**Ureterocystos′tomy.** Operation of making a communication between the bladder and a part of the ureter not immediately connected with it.

**Ureteroenteros′tomy.** Establishment of fistulous communication between ureter and intestine.

**Ure′terolith** (*lithos*, stone). Calculus in the ureter.

**Ureterolith′ic.** Epithet applied to ischury or other affection caused by a stone in the ureter.

**Ureterolithot′omy.** Operation of removing a calculus from the ureter.

**Ureterol′ysis** (*lysis*, solution). Rupture of the ureter.

**Ureterophlegma′sia.** Ureteritis.

**Ureterophlegmat′ic** (*phlegma*, phlegm). Term applied to any affection accompanied by the presence of mucus in the ureter.

**Ureteropyeli′tis.** Inflammation of the ureter and pelvis of the kidney.

**Ureteropy′ic** (*pyon*, pus). Relating to an affection accompanied by the presence of pus in the ureter.

**Ureteropyo′sis.** Suppuration in the ureter.

**Ureterorrha'gia.** Hemorrhage from the ureter.

**Ureteror'rhaphy.** Suture of the ureter.

**Ureterostegno'sis, Ureterosteno'ma,** or **Ureterosteno'sis** (*stenos*, narrow). Narrowing of the ureter.

**Ureteros'toma** (*stoma*, mouth). Orifice of the ureter.

**Ureterostomat'ic.** Relating to the ureteral orifice.

**Ureteros'tomy.** Establishment of fistulous communication with the ureter.

**Ureterot'omy** (*tome*, incision). Incision in the ureter.

**Ure'tero-ure'teral.** Relating to or connecting different portions of the ureter, as *uretero-ureteral anastomosis,* operation for uniting two separated or divided portions of the ureter.

**Ure'tero-ureteros'tomy.** Establishment of fistulous communication between the two ureters.

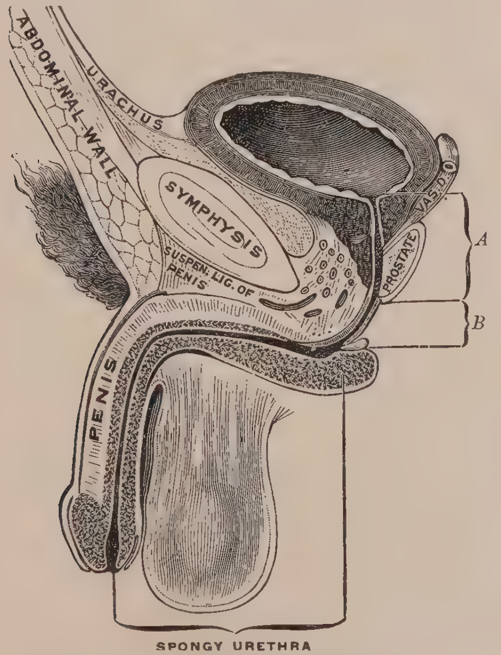
**Ure'tero-u'terine.** Relating to a ureter and the uterus.

**Ureterovag'inal.** Relating to ureter and vagina.

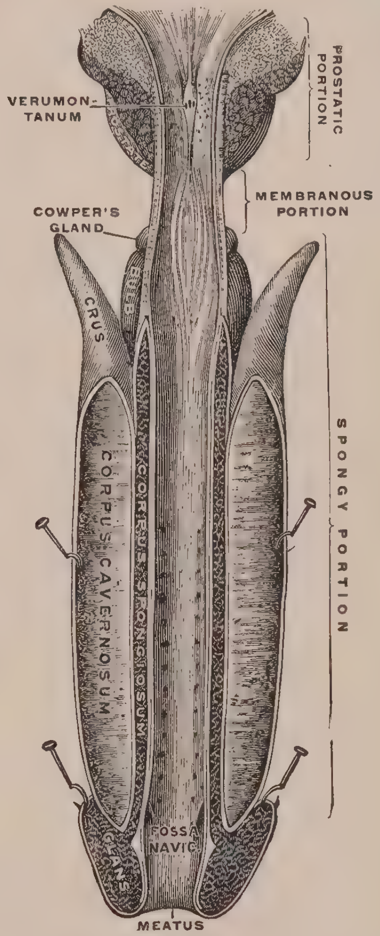
**Ure'thalan.** Methyl-urethane.

**Ure'thane.** Ethyl carbamate, produced by the action of nitrate of urea on ethyl alcohol; occurring in crystals or crystalline masses, and asserted to be antispasmodic, hypnotic, and antipyretic; dose, gr. x–xxx (0.65–2.0); also employed as an antidote for strychnine poisoning. **Chlo'ral-u.,** ural. **Eth'yl-u.,** urethane. **Meth'yl-u.,** urethylane.

**Ure'thra** (*oureo*, to pass the urine). Excretory duct for the urine in both sexes and for the sperm in man. In the latter it is eight or ten inches long, and extends from the neck of the bladder, ostium vesicale, to the extremity of the penis. In the *male urethra* three portions are distinguished: 1. Prostatic portion, traversing the prostate gland. 2. Membranous portion, between the layers of the triangular ligament. 3. Spongy portion, within the corpus spongiosum urethræ. On the floor of the prostatic portion is a ridge called the caput gallinaginis or verumontanum, and on either side of this is the so-called prostatic sinus containing the orifices of the prostatic ducts. In the centre, at the beginning of the verumontanum, is the sinus pocularis, into which open the ejaculatory ducts. The spongy portion presents two dilatations, the first, the bulb, at its commencement, where it pierces the bulb of the corpus spongiosum, the second just behind the meatus, the fossa or fovea or fossicula navicularis or Morgagnii. The orifice of the urethra is termed the meatus. The urethra is lined in its whole extent by a mucous membrane, in which are seen, particularly at the bulb, the orifices of a number of follicular ducts, lacunæ or sinuses or foramina of Morgagni, proceeding from or constituting the glands of Morgagni or of Littré. About an inch and a half from the opening of the meatus one of these lacunæ is generally found much larger than the rest, and is named lacuna magna. The *female urethra* is about an inch and a half long. It is very wide at its commencement, terminating at the top of the external aperture of the vagina by the meatus urinarius. **Blind ducts of the u.,** mucous lacunæ of the urethra. **Pe'nile u.,** the spongy portion of the u. **Stric'ture of the u.,** see *Urethrostenosis.* **Vas'cular tu'mor of the u.,** urethral hemorrhoid or polypus; small, scarlet, extremely sensitive, spongy vegetation at the opening of the female urethra.



Male urethra, sagittal section: *A*, prostatic portion; *B*, membranous portion. (Gerrish.)



Male urethra, laid open on its anterior (upper) surface. (Gerrish.)

**Ure'thral.** Relating to the urethra. **U. chan'cre,** concealed or masked c.; see *Chancre.* **U. cri'ses,** attacks of violent pain in the urethra occurring in tabes dorsalis and certain other affections. **U. fe'ver,** elevation of temperature, sometimes with chill and sweats, occasionally following the introduction of a sound or other instrument into the urethra. **U. hem'orrhoids,** vascular tumor of the urethra. **U. pol′ypus,** vascular tumor of the urethra. **U. rheum′atism,** see *Rheumatism, urethral.* **U. shock,** rigor and collapse following urethral operation or catheterization.

**Urethral′gia** (*algos,* pain). Pain in the urethra.

**Urethra′lis.** Urethral. Ischio-urethralis muscle.

**Urethram′eter** (*metron,* measure). Instrument used in measuring the calibre of the urethra.

**Ure′thrascope.** Urethroscope.

**Urethrec′tomy.** Excision of the urethra.

**Urethremphrax′is.** Obstruction of the urethra.

**Ure′thrism.** Irritability or excitability of urethra.

**Urethri′tis.** Inflammation of the urethra; it is either *simple* or *non-specific,* or *gonorrhœal* or *specific.*

**Urethroblennorrhœ′a** (*blenna,* mucus, *rheo,* to flow). Gonorrhœa; gleet.

**Urethrobul′bar.** Relating to the portion of the urethra contained within the bulb of the corpus spongiosum.

**Ure′throcele** (*kele,* tumor). Pouch-like thickening or protrusion of the mucous membrane of the female urethra, having the appearance of a tumor, and leading at times to ulceration and vesical catarrh.

**Urethrocysti′tis.** Inflammation of both bladder and urethra.

**Urethrohæmorrha′gia.** Hemorrhage from the urethra.

**Urethrom′eter.** Instrument for measuring the calibre of the urethral canal.

**Urethrope′nile.** Relating to the urethra and penis.

**Urethroperine′al.** Relating to the urethra and perineum.

**Urethroperineoscro′tal.** Relating to the urethra, perineum, and scrotum.

**Urethrophrax′is** (*phrasso,* to obstruct). Obstruction of the urethra.

**Urethroplas′tic** (*plasso,* to form). Relating to urethroplasty.

**Ure′throplasty.** Surgical procedures designed to repair defects in the urethra.

**Urethrorec′tal.** Relating to urethra and rectum.

**Urethrorrha′gia.** Hemorrhage from the urethra.

**Urethror′rhaphy** (*rhaphe,* suture). The operation of closing a urethral fistula by suture.

**Urethrorrhœ′a** (*rheo,* to flow). Discharge of any kind from the urethra.

**Ure′throscope** (*skopeo,* to examine). Form of endoscope for inspecting the interior of the urethra.

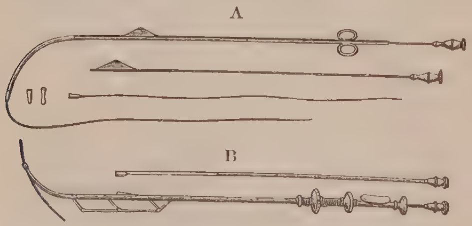
**Ure′throscopy.** Inspection of the interior of the urethra by means of the urethroscope.

**Ure′throspasm.** Spasm of the urethra.

**Urethrostegno′sis, Urethrosteno′ma,** or **Urethrosteno′sis** (*stenos,* narrow). Stricture of the urethra; may be spasmodic or organic. Organic stricture is caused by the contraction of inflammatory deposit upon, within, or beneath the mucous membrane, or of the cicatrix of a ruptured or injured urethra; the former being simple organic stricture, the latter traumatic or cicatricial stricture. Other varieties are described, as whipcord, ring, bridle, and ribbon strictures, according to the shape of the constricting portion.

**Urethros′tomy.** Establishment of fistulous communication with urethra. Perineal section in which the membranous urethra is fixed in the perineum.

**Ure′throtome** (*tome,* incision). An instrument for dividing strictures of the urethra.



A, Maisonneuve urethrotome with filiform guide; B, Otis dilating urethrotome.

**Urethrot′omy.** Division of a urethral stricture. **Exter′nal u.,** division of stricture by external section into the urethra. **Inter′nal u.,** division of stricture by internal section of the urethra.

**Urethrovag′inal.** Relating to the urethra and vagina, as urethrovaginal fistula.

**Urethroves′ical.** Relating to the urethra and bladder.

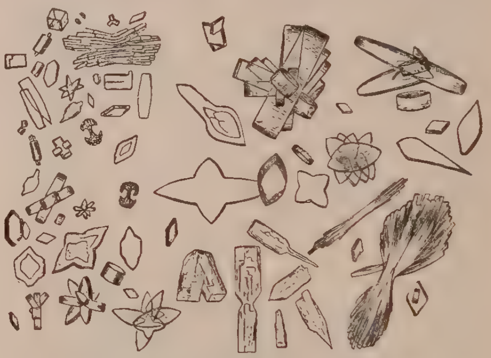
**Ure′thylane.** $C_2H_5NO_2$. Methylurethane. Hypnotic.

**Ure′tic.** Diuretic; urinary.

**Urgin′ea scil′la.** Scilla.

**Uri′asis.** Lithiasis; uresis.

**U′ric.** Relating to urine. **U. acid,** lithic acid; dibasic acid occurring normally in urine, chiefly as acid sodium urate, average amount being 0.05 per cent. of urine voided; also found in combination with potassium, ammonium, calcium, and magnesium; it crystallizes most often in wedge-shaped figures; other forms resemble barrels, sheaves, rosettes, combs, etc.; soluble in 15,000 parts of water, insoluble in alcohol; it is found in the excrement of some animals, as birds, molluscs, and insects, and solid urine of serpents, and in Peruvian guano; it is the principal eliminant of nitrogen next to urea. **U.-a. diath′esis,** lithæmia. **U.-a. leucomains′,** a group of leucomains related in structure to uric acid; this includes adenin, hypoxanthin, guanin, xanthin, heteroxanthin, paraxanthin, carnin, pseudoxanthin, gerontin, and spermin. **U.-a. show′ers,** occasional temporary increase of the amount of uric acid in chronic gout. **U. ox′ide,** xanthic oxide, xanthin, urous acid; substance first described in urinary calculus; more recently has been found as a normal, though scanty, constituent of urine, muscles, liver, spleen, and thymus gland. It is a colorless powder, insoluble in water, alcohol, and ether, but readily dissolves in dilute acids and alkalies.



Various forms of uric-acid crystals.

**Uricacidæ′mia.** Uricæmia; lithæmia.

**Uricæmia,** u-rik-e′me-ah (*haima,* blood). Condition of the blood in which there is presumed to be an excess of uric acid.

**Uridro′sis** (*ouron,* urine, *hydros,* sweat). Urinous sweating, as in uræmia. **U. crystal′lina,** deposit of crystals of uric acid on the skin.

**Uri′na.** Urine. **U. cerebel′la,** urine of whitish appearance. **U. ci′bi** or **chy′li,** urine secreted after digestion of a full meal. **U. galacto′des,** urine of a milky color. **U. genita′lis,** sperm. **U. hyster′ica,** pale urine passed in large amount after an hysterical attack. **U. jumento′sa** or **jumenta′ria,** jumentous urine. **U. muco′sa,** cystirrhœa. **U. nephelo′des,** cloudy urine. **U. oroboi′des** or **orobo′des,** urine with a fawn-colored deposit. **U. po′tûs,** urine secreted after the ingestion of fluids. **U. san′guinis,** urine of average density secreted independently of immediate stimulus of food and drink, as after a night's rest. **U. spas′tica,** u. hysterica.

**Urinaccelera′tor.** Accelerator urinæ muscle.

**Urinac′ulum.** Urachus. Urinal.

**Uri′næ proflu′vium** (a flux of urine). Diabetes.

**U. stillicid′ium**, strangury. **U. substil′lum**, strangury. **U. suppres′sio**, retention or suppression of urine.

**Urinæ′mia** (*ouron*, urine, *haima*, blood). Presence of urinary materials in the blood.

**U′rinal.** Name given to certain vessels used to pass the urine into, and to reservoirs of different shapes and character adapted to the penis in incontinence of urine, and intended to receive the urine as it flows off.

**Urina′lis.** Diuretic; urinary.

**Urinal′ysis.** Uranalysis.

**Urina′ria.** Antirhinum linaria; Leontodon taraxacum.

**U′rinary.** That which relates to the urine. **U. appara′tus**, urinary organs. **U. blad′der**, a musculomembranous reservoir situated in the hypogastric region, between the rectum and pubis in man, and between the pubis and vagina in the female. Its upper region is covered by the peritoneum posteriorly. Its lower region is bounded, anteriorly, by the prostate in man, and rests on the vesiculæ seminales and rectum; in the female it corresponds to the vagina. The lowest portion of this organ bears the name bas-fond, in which the ureters open and the urethra commences; the triangular space which the apertures of these three canals leave between them is termed *vesical triangle*, *trigonus* or *trigonum vesicæ* or *Lieutaudi*, *corpus trigonum*. The anterior surface of the bladder is not covered by peritoneum. It is attached to the symphysis pubis by a fibrocellular expansion, the anterior ligament. The posterior ligaments or rectovesical folds are duplicatures of peritoneum on its posterior surface, extending from this surface to the rectum in the male and the uterus in the female. The bladder is composed of four coats—serous, muscular, submucous, and mucous. In the neck of the bladder there is, at its lower part, a more or less prominent tubercle, the *vesical uvula*, *uvula vesicæ*, *valvula vesico-urethralis* or *pylorica*. This is the lower termination of a median ridge in the trigone, called *uvula of Lieutaud*. The following facts are of interest (Vierordt):

Weight of bladder and ureters, 193 g. (E. Bischoff).

| | |
|---|---|
| Height (from fundus to vertex) | 50–100 mm. |
| Breadth | 40– 90 |
| Antero-posterior thickness | 40– 70 |
| Natural capacity (in the living) | 200–400 c.cm. (Krause). |

| | Men. | Women. | |
|---|---|---|---|
| When urine is retained intentionally, | 710 | 650 | average figures (Hoffmann). |
| According to examinations of cadavers, | 735 | 680 | |

| | |
|---|---|
| Wall when contracted | 15 mm. (Luschka), 12 thick. |
| " when moderately distended | 3–4, at trigonum 6 |
| Mucous membrane | 0.1 |
| Epithelium | 0.06–0.1 |
| Acinous glands | 0.09–0.54 in size. |

**U. cal′culi**, the calculi which form in the urinary passages; see *Calculi, urinary*. **U. depos′it**, solid particles precipitated from the urine by reagents or which settle to the bottom after the urine has been standing for a few hours. **U. fe′ver**, urethral fever. **U. fis′tula**, abnormal communication between the urinary passages and the external surface. Urine sometimes finds an outlet through it. **U. or′gans**, urinary apparatus; organs concerned in the formation of urine—the kidneys; also the bladder and urinary passages. **U. pas′sages**, aggregate of canals and cavities containing the urine and conveying it externally; composed of excretory ducts, forming the tubular portion of the kidney—calices, pelvis, ureters, bladder, and urethra. **U. re′flex**, reflex action leading to micturition and the desire to empty the bladder, consisting of an impression passing from that organ to the micturition-centre, and back again to the bladder. **U. sed′iment**, u. deposit.

**Urina′tion.** Micturition. The act of passing water; also morbid frequency of passing the water. Urination may become pathologically interesting from abnormal change in this function as regards volume, continuity, or direction of the stream passed. It may thus become sometimes uncontrollable, or perhaps entirely checked, so that it may become impossible, as shown in the following table (E. Hurry Fenwick):

### I. Abnormal Urination.

- Abnormal urination.
  - Alterations in the volume of the stream (size of efflux).
    - Sense of obstruction developing suddenly.
      - Gonorrhœa.
      - Acute prostatitis.
      - Impaction of stone in urethra.
      - Congested senile prostate.
    - Sense of obstruction developing gradually.
      - Onanitic prostate.
      - Chronic prostatitis.
      - Stricture.
      - Chronic lesions of spinal cord.
      - Stone in the bladder.
      - Orificial valves of mucous membrane.
      - Stone in urethra.
      - Senile enlargement of prostate.
      - Pelvic tumors.
  - Alterations in the continuity of the stream (interruption of efflux).
    - Efflux arrested suddenly.
      - Stone, clot, pedunculated growth, foreign body.
      - Spasm.
    - Efflux arrested intermittently. (Stuttering urination.)
      - Atony, muscular or nervous.
      - Muscular enfeeblement of fever or old age.
  - Alterations in the direction of the stream (the parabola).
    - Stream bifid. — Stricture.
    - Stream vertical. — Enlarged prostate.

### II. Impossible Urination.

- Impossible urination (no urine passed).
  - Suppression of urine.
    - Non-obstructive.
      - Renal disease.
      - Shock.
      - Septicity.
      - Hysteria.
      - Reflex causes.
      - Injury to one kidney.
    - Obstructive. — Ureteral obstruction.
  - Retention of urine.
    - Peritonitis.
    - Fevers.
    - Pressure on bladder neck.
      - Rectal collections.
      - Pelvic growths; hydatids.
      - Soft malignant prostatic growths.
    - Urethral obstruction.
      - Acute prostatitis.
      - Congested stricture.
      - Impacted stone in children.
      - Ruptured urethra.
    - Reflex spasmodic action. — Anal and hernial operations, etc.
    - Nerve lesions.
      - Acute myelitis.
      - Tabes.

### III. Uncontrollable Urination.

- Uncontrollable urination.
  - Irrepressible urination.
    - Inflammatory.
    - Cystospastic reflex.
    - Chorea (?).
  - Involuntary urination.
    - Childhood.
      - True incontinence.
        - Sphincter paresis.
        - After perineal lithotomy.
      - False incontinence.
        - Nocturnal.
        - Dirty habits.
        - Reflex conditions.
          - Worms; polypus of rectum; over-acid or alkaline urine.
          - Phimosis.
    - Adult life up to fifty.
      - True incontinence.
        - Operative injury of sphincter.
        - Advanced tuberculosis of bladder with sphincteric impairment.
        - Other forms of sphincteric impairment.
        - Injury or disease of spinal cord and brain abolishing sphincter power.
      - False incontinence.
        - Nocturnal.
        - Ataxia with detrusor paresis.
        - Tight stricture.
        - Intoxication.
    - Old age.
      - True incontinence.
        - Unsymmetrical enlargement of prostate.
      - False incontinence.
        - Nocturnal.
        - Overflow of an atonic bladder from prostatic obstruction.

The influence of the nervous system and of arterial pressure on the secretion of urine is well exhibited in the following table (Kirkes):

*Secretion of urine may be increased*—
- *a.* By increasing the general blood-pressure, by
  1. Increase of the force or frequency of heart beat.
  2. Constriction of the small arteries of areas other than that of the kidney.
- *b.* By increasing the local blood-pressure, by relaxation of the renal artery, without compensating relaxation elsewhere; by
  1. Division of the renal nerves (causing polyuria).
  2. Division of the renal nerves and stimulation of the cord below the medulla (causing greater polyuria).
  3. Division of the splanchnic nerves; but the polyuria produced is less than 1 or 2, as these nerves are distributed to a wider area, and the dilatation of the renal artery is accompanied by dilatation of other vessels, and therefore with a somewhat diminished general blood-supply.
  4. Puncture of the floor of the fourth ventricle or mechanical irritation of the superior cervical ganglion of the sympathetic, possibly from the production of dilatation of the renal arteries.

*Secretion of urine may be diminished*—
- *a.* By diminishing the general blood-pressure, by
  1. Diminution of the force or frequency of the heart-beats.
  2. Dilatation of capillary areas other than that of the kidney.
  3. Division of spinal cord below the medulla, which causes dilatation of the general abdominal area, and urine generally ceases being secreted.
- *b.* By increasing the blood-pressure, by stimulation of the spinal cord below the medulla, the constriction of the renal artery which follows not being compensated for by the increase of general blood-pressure.
- *c.* By constriction of the renal artery, by stimulating the renal or splanchnic nerves or the spinal cord.

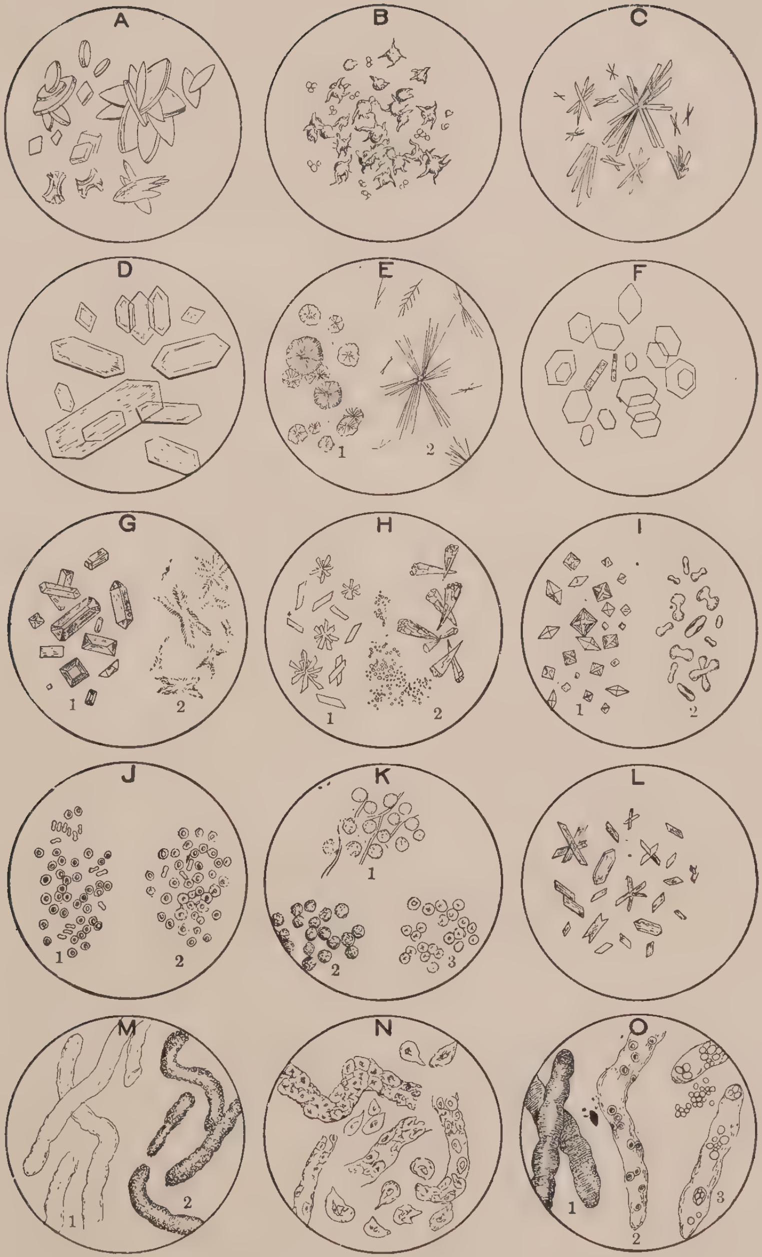
Special names have been given to the passage of urine containing abnormal constituents or normal constituents in abnormal amounts. Thus, that which is characterized by a deficiency of solid matters generally has been called hydruria; by a deficiency of urea, anazoturia; by a superabundance of urea, azoturia; by the presence of albumin, albuminuria; by greater density, baruria. Urine in which the deposit consists of uric or lithic acid and the lithates has been termed lithuria; that in which the deposit consists of the earthy and earthy alkaline phosphates, phosphaturia, ceramuria, etc. At times a pellicle forms on the surface (cremor urinæ), which consists of mucus and some salts; at others there is a cloud (nubecula, nubes) toward its upper part, which is sometimes suspended, as it were, about the middle of the liquid. Not infrequently there is a sediment.

**Urinato′rium.** Urinal.

**U′rine** (*ouron*). Excrementitial fluid secreted by the kidneys in which effete nitrogenized products are thrown out from the system. Urine is transparent, of a citron-yellow color, of a peculiar odor, and of an acid, saline, and slightly bitter taste. That which is passed some time after taking fluid is less colored, and less odorous and dense, than that which is voided some time after eating. The proportion of solid matters in 1000 parts of urine may vary from 30 to 70 and upward. The average composition of urine is affected by the water and food taken, amount of labor—mental or physical—time of day, age, sex, temperature of the air, etc. Urine also contains gaseous matter, equal to about 1 per cent. by volume; of this, chiefly carbon dioxide, 88 per cent., nitrogen, 11 per cent., and oxygen, 1 per cent. The following table shows the average composition of urine and the amount of each constituent voided daily:

| | | | Voided per day. | |
|---|---|---|---|---|
| | | | Grains. | Grammes. |
| Water | 950 | | | |
| Urea | 28 | Organic matter, 37.60. | 520.80 | 35.00 |
| Uric acid | 0.60 | | 11.16 | 0.75 |
| Hippuric acid | 0.35 | | 6.51 | 0.44 |
| Creatinine | 0.65 | | 12.09 | 0.81 |
| Extractives | 8.00 | | 148.80 | 10.00 |
| Sodium chloride | 8.00 | Inorganic matter, 12.40. | 148.80 | 10.00 |
| Phosphoric acid | 2.00 | | 37.20 | 2.50 |
| Sulphuric acid | 1.25 | | 23.45 | 1.56 |
| Lime (CaO) | 0.25 | | 4.65 | 0.31 |
| Magnesia (MgO) | 0.30 | | 5.58 | 0.37 |
| Potash ($K_2O$) and soda ($Na_2O$) | 0.60 | | 11.16 | 0.75 |
| Total | 1000.00 | | 930.20 | 62.49 |
| Water | 950.00 | | | |
| Organic matter | 37.60 | | 699.36 | 47.00 |
| Inorganic matter | 12.40 | | 230.64 | 15.49 |

The average quantity of urine voided in twenty-four hours is from forty to sixty fluidounces. Its specific gravity varies within wide limits in health, the average being about 1.020. **Ar′dent u.**, urine that is hot or of a deep red color. **Black u.**, melanuria. **Blood′y u.**, hæmaturia. **Chy′lous u.**, chyluria. **Crude u.**, urine that is thin, transparent, and but little colored, affording neither cloud nor deposit. **Cystin′ic u.**, urine containing cystin or cystic oxide in solution or as a deposit. **Diabet′ic u.**, saccharine urine; urine passed in diabetes mellitus, mellituria, or glycosuria, containing glucose, which may be separated in the form of crystals. The quantity of urine voided in diabetes mellitus is usually greater than in health, and the normal urinous odor is generally absent. It is pale, limpid, of sweet taste, specific gravity usually ranging between 1030 and 1050, or even 1060. Glucose may be present, varying from a trace up to 10–12 per cent., or even 14 per cent. **Drop′sical u.**, ammoniacal urine, often containing much albumin and scarcely any urea. **Dys-**



Urinary sediments: A, uric acid; B, ammonium urate; C, sodium urate; D, urea nitrate; E—1, leucin, 2, tyrosin; F, cystin: G, triple phosphate—1, triangular prisms, 2, star-shaped crystals; H, calcium phosphate—1, prisms, 2, wedge-shaped crystals; I, calcium oxalate—1, octahedra, 2, dumb-bell crystals; J, red blood-corpuscles—1, normal, 2, as usually seen in urine; K—1, mucus, 2, pus-cells, 3, pus-cells after treatment with acetic acid, showing the nuclei; L, hæmin crystals; M—1, hyaline casts, 2, granular casts; N, epithelial cells and casts; O—1, waxy casts, 2, blood-casts, 3, fatty casts. (Simon.)

**pep'tic u.** contains calcium oxalate, precipitates tannin abundantly, and putrefies quickly.

**U'rine, examina'tion of.** The examination of urine includes the complete study of that fluid, either normal or abnormal, in all its various relations. The following facts are to be investigated (after Simon):

I. *Points to be considered in the analysis of urine.* These are: 1. Color, odor, general appearance—whether clear, smoky, cloudy, turbid, etc. 2. Reaction: whether acid, neutral, or alkaline to test-paper. 3. Specific gravity. 4. Total amount of organic and inorganic solids. 5. Total amount of inorganic matter (ash). 6. Determination of urea. 7. Determination of uric acid. 8. Determination of inorganic acids and bases (hydrochloric, sulphuric, and phosphoric acids; sodium, potassium, calcium, magnesium, and iron). 9. Determination of albumin. 10. Determination of sugar. 11. Examination for bile. 12. Examination of any organic or inorganic sediment, either by chemical means or by the microscope. 13. Determination of the functionating power of the kidneys. Samples of urine should always be drawn from the well-mixed and exactly measured quantity of the total urine discharged in twenty-four hours.

1. *Color.* Reddish and smoky tint generally indicates the presence of blood, and a brownish-green suggests the presence of the coloring-matter of bile. The amount of indican is small, but it is increased in a number of diseases. The most convenient test is made by mixing equal volumes of urine and hydrochloric acid in a test-tube, and adding drop by drop a filtered solution of bleaching-powder until a green, violet, or blue color is noticed. Normal urine shows a green color only, while a violet-red or intense blue color indicates the presence of indican. By shaking the contents of the test-tube with a little chloroform, the indican is absorbed by the latter, imparting to it a distinct blue color. If the urine should contain albumin, this must be separated before applying the test. Abnormal coloring-matters are chiefly those of blood, bile, and of certain vegetables; rhubarb and senna leaves cause a reddish-yellow to deep red color, especially in alkaline urine; santonin produces a bright yellow color, changing to red or crimson on the addition of an alkali. Carbolic acid, resorcin, naphthalin, and other substances introduced into the system in full doses cause a dark or even black discoloration of the urine. The coloring-matters of blood may be recognized by adding to a few drops of urine a drop of freshly prepared tincture of guaiacum and agitating with a solution of ozonized ether (ethereal solution of hydrogen dioxide); the latter is colored blue in case hæmoglobin is present. In place of ozonized ether, oil of turpentine which has been in contact with atmospheric air for some weeks may be used, and the test made by allowing urine to flow down the test-tube containing a mixture of the oil and tincture; a blue coloration slowly appearing at the juncture of the liquids indicates the presence of blood.

2. *Odor.* The normal odor of fresh urine is sometimes spoken of as aromatic. The ammoniacal and putrescent odor of urine after standing is due to the products of decomposition, chiefly ammonia. Aromatic substances taken internally impart an odor to the urine; oil of turpentine, cubebs, copaiba, asparagus, garlic, valerian, and other substances promptly transfer their odor to the urine.

3. *Reaction.* This is generally acid in healthy urine recently passed, but may become neutral or alkaline within a short period by decomposition of urea and the formation of ammonium carbonate. The acid reaction is due chiefly to free uric and hippuric acids, and also to acid phosphates of sodium and potassium. Urine may show a neutral or even alkaline reaction; in many cases the latter points to decomposition of urea in the bladder, but it may be due also to the elimination of alkaline carbonates from food taken or drugs administered.

4. *Specific Gravity.* The normal specific gravity is about 1.020, but it varies, even in health, from 1.012 to 1.030 or more. A specific gravity above 1.030 may indicate the presence of sugar. Albuminous urine is frequently of low specific gravity, 1.010 to 1.012. The specific gravity of urine, considered separately from the quantity of urine passed in twenty-four hours, is of no value, and in some diseases (as acute nephritis with albuminuria) the specific gravity of albuminous urine may be as high as 1.030, while a diabetic urine may have a specific gravity of 1.025 or less, in consequence of the large volume passed. The specific gravity of urine is generally determined by the urinometer, a small hydrometer which can give correct results only at a certain degree of temperature, generally marked upon the instrument.

5. *Determination of Total Solids.* The last two figures of the specific gravity of urine, multiplied by 2.2, correspond to the number of grammes in 1000 c.c. of urine. If, for instance, 1750 c.c. of urine of a specific gravity of 1.018 have been discharged in twenty-four hours, then the quantity of total solids in 1000 c.c. will be 18×2.2, or 39.6 grammes; and in 1750 c.c. 69.3 grammes. This is a sufficiently exact method, but more minute ones are sometimes employed.

1750
39.6
[illegible]
69.3

6. *Determination of Inorganic Constituents.* The platinum dish containing the known quantity of total solids is exposed to a non-luminous flame until all organic matter has been destroyed and expelled. By reweighing and deducting the weight of the platinum dish, plus ash, from the weight of the dish, plus total solids, the quantity of total organic matter is determined; and by deducting the weight of the dish from the weight of the dish plus ash the total quantity of inorganic matter is found. In the analysis of the ash, chlorine is determined by precipitating the solution of the ash in nitric acid with silver nitrate; sulphuric acid by barium chloride; phosphoric acid by ammonium molybdate; calcium by ammonium oxalate; potassium by platinic chloride; iron by potassium ferrocyanide, etc. With many of the inorganic constituents it is not necessary to destroy the organic matter as described above, as the result can be effected directly. Thus, *chlorine* may be precipitated directly from urine (slightly acidulated with nitric acid) by silver nitrate; the precipitated silver chloride is collected upon a small filter, well washed, dried, and weighed in a porcelain crucible after the filter (to which particles of silver chloride adhere) has been burned separately and its ash added to the contents of the crucible, which is moderately heated before weighing. *Phosphoric acid* is found in urine, in part (about two-thirds) combined with alkalies, and in part (about one-third) with lime and magnesia. By adding any alkali the phosphates of calcium and magnesium (generally termed earthy phosphates) are precipitated; the phosphates of sodium or possibly potassium remain dissolved. These so-called earthy phosphates may be approximately determined by adding a few drops of an alkaline hydroxide to about 50 c.c. of urine, heating to the boiling point, collecting on a filter, washing, igniting, and weighing in a platinum crucible.

7. *Urea.* The average amount of urea excreted in the twenty-four hours is about 33 grammes. There are no very characteristic reactions by which urea can be well recognized. From organic mixtures it is separated by digesting them with from 3 to 4 volumes of alcohol in the cold; the filtered liquid is evaporated to dryness and extracted with alcohol, which again is evaporated. The dry residue may be tested for urea as follows: 1. Dissolved in a few drops of water, the addition of an equal quantity of colorless nitric acid causes the formation of white, shining crystalline plates or prisms of urea nitrate. 2. If a strong solution of oxalic acid is added instead of nitric acid, rhombic plates of urea oxalate form. 3. The residue (or urea) heated in a test-tube to

about 160° C. (320° F.), until no more vapors of ammonia are evolved, leaves a substance termed *biuret*, $C_2H_6N_3O_2$, which upon the addition of a few drops of potassium hydroxide solution and a drop of cupric sulphate solution causes the formation of cupric hydroxide with a reddish-violet color. The *quantitative estimation of urea* in urine is based upon the fact that urea is decomposed by hypobromites into carbon dioxide, water, and nitrogen. The liberated nitrogen is collected, and from its volume its weight and that of the urea are calculated. Other quantitative tests are those known as Liebig's, depending upon the fact that mercuric nitrate forms an insoluble white precipitate in contact with urea, and Fowler's differential density method, depending upon the reduction of specific gravity resulting from the decomposition of urea by the hypochlorites.

8. *Uric Acid.* Uric acid may be recognized by its crystalline form and by the murexide test, which is made by placing a fragment of the suspected substance in a porcelain dish, adding a drop of nitric acid, and carefully evaporating over a flame. To the dry residue a drop of ammonia-water is added, which produces a beautiful purplish-red color. This reaction occurs, however, also with a number of substances which are similar to but more complex in composition than uric acid. The *quantitative estimation of uric acid* in urine is best accomplished by adding 10 c.c. of hydrochloric acid to 250 c.c. of urine, setting aside for twenty-four hours in a cool place, and collecting the crystals of uric acid on a small filter which has been previously weighed. The crystals are washed with a little water and dried at 100° C. (212° F.). As uric acid is not entirely insoluble, 0.0038 gramme must be added for every 100 c.c. of urine employed for the analysis. If the urine to be tested for uric acid be very dilute, it should be evaporated to about one-half its bulk before hydrochloric acid is added; if it contain albumin, this should be removed by adding acetic acid, boiling, and filtering.

9. *Detection of Albumin.* Serum albumin and serum globulin are the forms most frequently present in urine, but peptones and other albuminoids are also met with. There are chiefly three methods by which the presence of albumin in clear urine may be demonstrated, based upon the coagulation of albumin by heat, by nitric acid, and by picric acid, but either metaphosphoric acid or trichloracetic acid may also be used. In most cases, if filtration through good filter-paper is not sufficient to render the urine clear, it may become necessary to use other means. Thus, if earthy amorphous phosphates are present, they may be removed by adding to the urine about a fourth part of potassium hydroxide solution, warming the mixture, and filtering. If the turbidity is caused by urates, the urine will generally become clear by passing the test-tube once or twice through a flame. The clear urine is then tested by either (or all) of the following methods:

(*a*) *Coagulation by Heat.* A test-tube is filled about one-half with urine, to which, if not distinctly acid to test-paper, a few drops of acetic acid are added. The test-tube is then held over the flame in such a manner that the heat acts upon the upper half of the urine only, heating this portion gradually to the boiling point. Two strata of fluid are thus obtained for comparison, and by holding the test-tube against the light or against a black background any difference in the appearance of the upper and lower strata may be noticed easily. Any cloudiness or opacity seen may be due to albumin, but may also be caused by phosphates. A few drops (10 to 15) of nitric acid allowed to flow gently down the side of the tube into the urine will cause the precipitate to disappear when it is caused by phosphates, but not when albumin is present. Or, instead of heating merely the upper half of the urine, the total quantity of urine (acidulated by a few drops of acetic acid) may be heated, and the test-tube set aside for several hours (after the addition of 10 to 15 drops of nitric acid), to allow the albumin to subside, when it can be more distinctly seen and its quantity noticed.

(*b*) *Nitric-acid Test.* A test-tube is filled to the depth of about half an inch with colorless nitric acid, and an equal quantity of urine is allowed to flow down the side of the test-tube, so that the specifically lighter urine forms a distinct and separate layer over the nitric acid. If albumin is present, a white band or zone of varying thickness (according to the quantity of albumin present) appears at the point of contact. If the urine is highly concentrated, a similar white zone is formed between the acid and urine, due to the separation of insoluble acid urates; but the coagulated albumin forms a sharply defined zone, while the urates diffuse into the urine above, and also dissolve on the application of heat. The separation of acid urates may be avoided by diluting the urine with an equal volume of water and placing this diluted urine upon the nitric acid.

(*c*) *Picric-acid Test.* By this test neither phosphates nor urates can be mistaken for albumin; it consists in slowly dropping urine into a test-tube filled to about one-fourth with a highly colored solution of picric acid in water. In the presence of albumin a white cloud or sharply defined white turbidity is formed, and on warming the liquid the albumin collects into balls, which rise to the surface of the liquid. Or a few drops of a saturated solution of picric acid may be gently poured over the surface of the suspected urine in a test-tube, a cloud forming where the two fluids meet if albumin is present.

(*d*) *Metaphosphoric acid* (glacial phosphoric acid) or *trichloracetic acid* may be used by dropping a fragment of either substance into a few c.c. of urine contained in a test-tube. As the acids dissolve a cloudy ring forms in the presence of albumin, which is not dissolved on warming

There are many other tests, as with sodium tungstate, mercuric nitrate, cupric sulphate, and caustic potash, alcohol, potassium ferrocyanide, etc.

The average amount of albumin present in acute albuminuria is 0.1 to 0.5 per cent., rarely over 1 per cent., though it may rise to 4 per cent. An approximate method for the comparative estimation of albumin is to precipitate it (with the precautions mentioned) in a graduated test-tube by heat and set it aside for twelve (or, better, for twenty-four) hours, when the proportion of coagulated albumin which has collected at the bottom of the fluid is noticed. If the albumin occupy one-fourth, one-sixth, one-tenth of the height of the liquid, there is said to be one-fourth, one-sixth, or one-tenth of albumin in the urine. If, however, scarcely any albumin has collected, there is said to be only a trace. A better method of exactly estimating the amount of albumin is its complete separation and weighing, as follows: Acidify 100 c.c. of clear, albuminous urine with acetic acid; heat to the boiling point in a water-bath for half an hour, and filter through a small filter, previously dried at 110° C. (230° F.) and weighed; wash with boiling water to which a little ammonia-water has been added (to remove uric acid and urates), then with pure water until the filtrate is not rendered turbid any longer by silver nitrate, next with pure alcohol, and finally with ether. Dry and filter the contents at 110° C. (230° F.) and weigh. As it may happen that the precipitated albumin encloses earthy phosphates, it is well to burn the filter with its contents in a platinum crucible, and to deduct the weight of the remaining inorganic residue (less the weight of the filter ash) from that of the albumin.

*Peptones* may be recognized by first precipitating all albumin by boiling the urine acidified by acetic acid, filtering, and pouring the cold filtrate carefully upon some Fehling's solution contained in a test-tube. At the junction of the two fluids a phosphatic cloud will appear, above which there will be seen a rosy tinted layer in the presence of peptones. In case the albumin should not have been separated completely, the color will be more violet.

10. *Blood in the Urine.* This is generally manifested by a blood-red or brownish color with a bluish, smoky, or greenish tint, and deposit of a red or reddish-brown sediment after standing. As a rule, all constituents of blood, including the corpuscles, are present, but in some cases hæmoglobin alone has been found. The tests for blood depend either on the microscope or on chemical changes. By the microscope is examined the deposit which forms on standing; almost unaltered blood corpuscles may be found, or they may be swollen, decolorized, and deformed, and they are generally accompanied by blood and fibrin casts. Whenever blood is present there are necessarily albuminoids, which are precipitated by acidulating with acetic acid and boiling, when a brownish coagulum of albumin and hæmatin is precipitated. Hæmoglobin is also tested for by adding to the urine a few drops of freshly prepared tincture of guaiacum, a little ozonized ether, and shaking well. If hæmoglobin is present, the ether assumes a blue color.

11. *Detection of Sugar.* Traces of sugar or as much as 0.01 per cent. are said to occur normally in urine. A large amount is often indicated by high specific gravity, which varies from 1.030 to 1.050; the quantities found vary from mere traces to 10 per cent., the latter, however, being very rare, while 3 to 5 per cent. is often found in the urine of diabetes mellitus. The four chief tests are generally known as the copper test (also termed Trommer's and Fehling's test), the bismuth test, the fermentation test, and the picric-acid test. The copper and the bismuth tests are based upon the deoxidizing or reducing power possessed by grape-sugar for many metallic oxides, as cupric, bismuthic, and silver oxide, which, in the presence of alkalies, are converted into the lower state of oxidation or are reduced to metals. Tests for sugar should always be preceded by tests for albumin, which, if present, should be removed by coagulation and filtration. Earthy phosphates interfere with the copper tests, because they are precipitated by the alkali, and this precipitate may be mistaken for precipitated cuprous oxide when no sugar is present, or it may cover the precipitated cuprous oxide so that this is not recognized when sugar is present. To avoid these errors it is well to render the urine slightly alkaline by a few drops of potash solution, filter after a few minutes, and use this urine for the tests.

(*a*) *Trommer's Test.* Two to four drops of a 5 per cent. solution of cupric sulphate are added to about 5 to 8 c.c. of urine in a test-tube, and then an equal volume of potassium (or sodium) hydroxide solution is added. The alkaline hydroxide precipitates both earthy phosphates and cupric hydroxide, the latter however, dissolving (especially if sugar be present) in the excess of alkali, producing a beautiful blue, transparent liquid. If no sugar is present the color is less blue, but more of a greenish hue. The liquid is now boiled for a few seconds, when if sugar be present a yellow precipitate of cuprous hydroxide is formed, which subsequently loses its water and becomes the red cuprous oxide, which falls to the bottom or adheres to the sides of the test-tube. As various organic substances (other than sugar) have a tendency to reduce cupric oxide at a temperature of 100° C. (212° F.), it is well to set aside a test-tube prepared as above (without heating it) for from six to twenty-four hours. If sugar be present the formation of cuprous hydroxide will gradually take place, while most other organic matters do not act upon cupric oxide at ordinary temperature. In drawing conclusions from the above test it should be remembered that a change of color does not indicate sugar; that a precipitate of earthy phosphates must not be mistaken for cuprous oxide; and that substances other than sugar may deoxidize cupric oxide at the temperature of 100° C. (212° F.).

(*b*) *Fehling's test* differs from Trommer's test in merely using a previously mixed reagent instead of producing this reagent, as it were, in the urine by adding to it cupric sulphate and an alkaline hydroxide successively. This reagent, known as Fehling's solution, is made as follows: Crystallized cupric sulphate, 34.65 grammes, dissolved in pure water, 200 grammes; this solution is poured gradually into a solution of crystallized sodium-potassium tartrate, 173 grammes, dissolved in solution of sodium hydroxide of sp. gr. 1.12, 500 grammes; the clear, well-mixed fluid is diluted to 1000 c.c. The addition of sodium-potassium tartrate in Fehling's solution prevents the precipitation of cupric hydroxide by the alkaline hydroxide. Fehling's solution is very apt to decompose, and if not recently made should be tested by boiling some of it alone and some of it mixed with about three volumes of water in test-tubes; if no precipitate occurs in either case, the fluid may safely be used. This is done by heating about 10 c.c. of Fehling's solution in a test-tube, and adding drop by drop the suspected urine; if the latter contains large quantities of sugar, a yellow or red precipitate of cuprous hydroxide and oxide will be produced very readily; if but small quantities are present, an equal volume of urine may be added to the solution, and the boiling repeated several times before the reaction takes place.

(*c*) *Böttger's* or *Boettcher's bismuth test* consists in adding to a mixture of equal volumes of urine and potassium (or sodium) hydroxide solution a few grains of subnitrate of bismuth and boiling for half a minute. If sugar is present, a gray or dark brown, finally black, precipitate of metallic bismuth is formed. If but very little sugar is present, the undecomposed excess of bismuthic nitrate (or bismuthic hydroxide) mixes with the metallic bismuth, imparting to it a gray color; the test should then be repeated with a smaller amount of the bismuth salt. If the urine contains hydrogen disulphide (sometimes produced by decomposition of certain urinary constituents), black bismuth sulphide will be formed, which may be mistaken for metallic bismuth; albumin itself may be the cause of the formation of alkaline sulphides; the previous complete separation of albumin is therefore indispensable.

(*d*) *The fermentation test* is based upon the decomposition of sugar by the action of yeast, with generation of carbon dioxide. The test is made by adding to about 50 or 75 c.c. of urine (contained in a large test-tube or small flask) a few c.c. of ordinary baker's or brewer's yeast. If sugar is present, fermentation will commence within twelve hours, and will manifest itself by the formation of carbon dioxide, which will force a portion of the fluid through the bent tube into the beaker placed there for its reception. The disadvantages of this process are the length of time required for its performance, the unreliability of the ferment, and the fact that small quantities of sugar (less than 0.5 per cent.) evolve so little carbon dioxide that a doubt may be felt as to the presence of sugar at all.

(*e*) *Picric-acid Test for Sugar.* In the presence of alkalies picric acid may also be used to advantage as a reagent for sugar. Urine is mixed with an equal volume of an aqueous solution of picric acid; a little caustic potash is added and gently heated; a marked reddish or reddish-brown coloration indicates sugar. By far the best method for the determination of sugar in urine is the decomposition of a copper solution of a known strength, and Fehling's solution, prepared as stated above, answers this purpose well. 1000 c.c. of Fehling's solution, containing 34.65 grammes of crystallized cupric sulphate, $CuSO_4 5H_2O$, are exactly decomposed by 5 grammes of grape-sugar, or 1 c.c. of solution by 0.005 of grape-sugar. The calculation of the amount of sugar present is easily made: 10 c.c. of Fehling's solution are decomposed by 0.05 gramme of sugar; this quantity must, therefore, be contained in the number of c.c. of urine used. Suppose 30 c.c. of urine, diluted with 9 parts of water, or 3 c.c. of pure urine, have been required to decompose the 10 c.c. of Fehling's solution; then 3 c.c. of urine contain of grape-sugar 0.05 gramme, or 100 c.c. of urine 1.666 grammes, according to the proportion: 3 : 0.005 :: 100 : 1.666. If the urine contains but very little sugar, it may be used directly without diluting it, or instead of diluting it with 9 parts of water it may be diluted with 4 volumes or with an equal volume of water. See *Fehling's solution.*

12. *Detection of Bile.* The presence of bile in urine is generally indicated by a decided color, from a deep brownish-red to a dark brown; the foam of such urine (produced by shaking) has a distinct yellow color, and a piece of filter-paper or a piece of linen dipped into the urine assumes a yellow color, which does not disappear on drying. The further detection of bile depends upon the reactions of the biliary coloring-matters or biliary acids; it frequently happens, however, that the pigments are present, while the acids are not.

(*a*) *Gmelin's test* for biliary coloring-matters may be applied by allowing a small quantity of nitric acid containing some nitrous acid to flow down the sides of a test-tube (containing the urine) in such a manner that the two fluids do not mix, or by placing upon a porcelain plate a few drops of the urine, near it a few drops of nitric acid to which one drop of sulphuric acid has been added, and allowing the two liquids to approach gradually. In both cases (if bile-pigment is present) a play of color is seen at the point of union between the two fluids, the colors changing from green to blue, violet-red, and yellow or yellowish-green; while the appearance of the green at the beginning is indispensable to prove the presence of bile, the presence of all the other colors is not essential. This test may be modified by mixing the urine with a concentrated solution of sodium nitrate, and pouring down the sides of the test-tube concentrated sulphuric acid in such a manner as to form two distinct layers; the colors are seen at the point of contact as above. If the urine is very dark in color, it should be diluted with water before applying these tests.

(*b*) *Ultzmann's test* for bile-pigment is made by mixing 10 c.c. of urine with 3 or 4 c.c. of potassium hydroxide solution (1 in 3 of water), and supersaturating with hydrochloric acid; the mixture assumes a beautiful emerald-green color after some time.

(*c*) *Pettenkofer's test* for biliary acids is made by dissolving a few grains of cane-sugar in urine contained in a test-tube, and allowing some concentrated sulphuric acid to trickle down the side of the inclined test-tube; a purple band is seen at the upper margin of the acid, and this, when the liquid is shaken, becomes at first turbid, then clear, and almost simultaneously it turns yellow, then pale cherry-red, dark carmine-red, and finally a beautiful purple-violet. The temperature must not be allowed to rise much above 38° C. (100° F.).

13. *Urinary Deposits* (*Sediments*). Urine may be turbid when passed, and this indicates an excess of mucus or the presence of renal epithelium, pus, blood, chyle, semen, bile, or phosphate or urate of sodium in excess, etc. A turbidity subsequent to the passage of the urine is generally due to the precipitation of phosphates or urates, or it may result from fermentation or decomposition. Either of the substances named will form a deposit on standing. When such a deposit is to be examined, a few ounces of the urine should be set aside for several hours in a tall, narrow, cylindrical glass; when the sediment has collected at the bottom, the supernatant urine may be decanted, or the sediment may be taken out by means of a pipette for examination. The solid portions of the urine may be obtained for examination more rapidly, however, by means of centrifugation. Sediments are either organized or unorganized. To the first belong mucus, blood, pus, urinary casts, epithelium, spermatozoids, fungi, infusoria, etc.; to the second belong uric acid, urates, calcium oxalate, phosphate, or carbonate, magnesium ammonium phosphate, cystin, hippuric acid, etc. Most of the unorganized and either crystalline or amorphous sediments may be easily recognized by chemical means. *Urates of ammonium, calcium,* and *sodium* dissolve on heating the urine, and are precipitated on cooling. The murexid test is used in addition. *Phosphates of calcium* or *ammonium-magnesium* dissolve in acetic acid, and ammonium molybdate dissolved in nitric acid produces a yellow precipitate on heating. *Calcium oxalate* is insoluble in acetic, but soluble in hydrochloric acid, from which solution it is reprecipitated on neutralizing with ammonia. *Uric acid* is not dissolved by heat or by acetic or hydrochloric acid, but dissolves on the addition of caustic potash, and burns on platinum foil without leaving a residue; it is recognized by the murexid test. *Cystin* is insoluble in water and alcohol, but soluble in mineral acids and in caustic alkalies; from either solution it is reprecipitated by neutralizing. Cystin contains 26 per cent. of sulphur, which causes the formation of black sulphide of lead when cystin is boiled with caustic potash to which a few drops of solution of lead acetate have been added. The chemical examination of any urinary sediment should always be preceded by a microscopic examination, which latter is in many cases the only way of determining the nature of the sediment, especially of the organized substances. *Uric acid* occurs in many different forms, mostly in rhombic plates with rounded obtuse angles, often joined into rosettes. Uric acid is found almost invariably colored red or reddish-brown, which generally distinguishes it from other sediments. The crystals or cluster of crystals are often large enough to be seen by the naked eye, and are then known by the terms "sand," "gravel," or "red-pepper grains." *Ammonium acid urate* is found generally associated with amorphous or crystalline phosphates in urine which has become alkaline. The crystalline globules are generally covered with spinous excrescences, which give them the characteristic "thorn-apple" appearance. *Sodium urate* forms generally a part in the pulverulent, heavy, variously tinted deposit of the mixed urates known as "brick-dust" or "lateritious" sediment. It occurs either in fine, amorphous granules, which cannot be distinguished microscopically from other amorphous sediments, or in a crystalline form. *Urea nitrate* crystallizes readily in large, six-sided plates on the addition of nitric acid to urine. *Leucin* or amido-caproic acid and *tyrosin* are but rarely met with in urinary deposits. *Leucin* is found either as rounded lumps, showing but little crystalline structure, or as spherical masses, exhibiting fine, radial striation. *Tyrosin* appears generally in fine, long, silky needles, forming bundles or rosettes. *Cystin* occurs occasionally as a grayish, crystalline deposit, forming transparent, six-sided plates; it also occurs in calculi. *Magnesium ammonium phosphate,* or triple phosphate, is found generally in triangular prisms with bevelled ends, but sometimes also in star-shaped, feathery crystals. *Calcium phosphate* is most frequently found in amorphous globules, but also crystallized, either in prisms or in "wedge-shaped" crystals. *Calcium oxalate* occurs either in quadratic octahedra with brilliant refraction or in the shape of "dumb-bells." *Blood corpuscles* appear under the microscope as reddish, circular disks, sometimes laid together in strings. If seen in profile they appear biconcave. *Mucus* and *pus* are often difficult to distinguish from one another under the microscope, as they both appear as little granular globules varying somewhat in appearance with the reaction of the urine. Pus is rendered slimy, ropy, viscid, and tenacious by the addition of caustic potash. *Hæmin crystals:* the formation of these crystals often serves for the recognition of blood; it is accomplished by mixing the suspected fluid on a glass slide with a little sodium chloride and a drop of glacial acetic acid and warming gently, when the

characteristic crystals will appear. By repeating the process several times larger and better-developed crystals are obtained.

*Hyaline casts* and *granular casts* are tube-like cylinders often found together with blood corpuscles and pus corpuscles, or holding in their substance or walls epithelial cells, mucous corpuscles, and fat globules. Hyaline casts are distinguished by their transparent appearance, while granular casts show a more or less granular surface. *Epithelial casts* and *cells*, according to their origin (from the vagina, urethra, bladder, etc.), differ somewhat, and it is difficult to recognize with certainty the source whence they are derived. *Waxy casts* resemble hyaline casts, but are less transparent. Casts containing blood corpuscles or fat globules are generally easily recognized. Other urinary deposits may also be found, various kinds of fungi, vibriones, spermatozoids, hair, or even such foreign matters as fibres of cotton, wool, or silk with their characteristic appearances.

14. *Urinary calculi* are solid deposits of larger or smaller size formed from within the urinary tract (kidneys, ureter, bladder, and urethra). The chemical composition of the calculi is generally that of either of the above-named unorganized sediments, and their nature can easily be determined. See *Calculi, urinary*.

15. *The functional activity* of the kidneys may be determined by cryoscopy, or the freezing test. This is based upon Raoult's law that a definite amount of any substance—expressed in molecules, not in weight or bulk—dissolved in a definite quantity of fluid reduces the freezing point of that liquid by a constant amount. If the freezing point is normal the kidneys are functionating properly, but it is raised in nephritis and in heart disease after the kidneys have become affected. The determination of the urotoxic coefficient is another method for ascertaining the amount of excrementitious material removed in this fluid. In order to express the comparative degrees of toxicity use is made of the urotoxic unit. This is the quantity of urine which when introduced into the circulation is sufficient to kill a rabbit weighing one kilogramme. The urotoxic coefficient is the number of toxic units formed, per kilogramme of weight, in the twenty-four hours. The urotoxic coefficient varies greatly in different conditions of health and disease.

**U′rine, feb′rile.** Concentrated urine of high color and strong odor discharged in cases of severe inflammation and fever. **U. fe′ver,** urethral f. **Filamen′tous u.,** urine containing thread-like substances. **Floc′culent u.,** urine when it is clouded by flocculi suspended in it. **Furfura′ceous u.,** urine containing a bran-like sediment. **Gout′y u.,** contains much phosphate of lime, and, after severe attacks of gout, precipitates a mixture of the uric and rosacic acids. **Hyster′ical u.** is clear and colorless. **Incon′tinence of u.,** see *Enuresis*. **Jumen′tous u.,** ammoniacal urine rendered turbid by a substance similar to small grains of dust, which causes it to resemble the urine of herbivorous animals. **Lactes′cent u.** or **milk′y u.,** white and turbid urine. **Mucilag′inous u.,** urine containing much mucus. **Ner′vous u.,** thin and very liquid urine, such as is passed shortly after an attack of hysteria. **Oil′y u.,** that which pours like oil or which has an oily pellicle at its surface. **Oxal′ic u.,** oxaluria, urine containing or depositing oxalates. **Phosphores′cent u.,** urine which is luminous or phosphorescent. **Purpu′ric u.,** see *Porphyruria*. **Reten′tion of u.,** see *Retention*. **Rick′ety u.,** contains much phosphate of calcium. **Sac′charine u.,** diabetic urine. **Salt of u.,** ammonii carbonas. **Sand′y u.,** urine which deposits a sandy sediment. **U.-se′rum,** see *Urinserum*. **Stop′page of u.,** ischuria; see also *Urination*. **Thin u.,** urine that is transparent, slightly colored, and of low specific gravity.

**Urinif′erous** (*urina, fero*, to carry). That which carries urine. **U. ducts** or **tubes of Belli′ni,** the collection of small tubes converging from the cortical part of the kidney to the apices of the papillæ. The tortuous uriniferous ducts are called tubes of Ferrein. **U. sub′stance of the kid′ney,** see *Kidney*.

**Urinip′arous** (*urina+pario*, to produce). Producing urine, said of the secreting portion of the kidney.

**Urinogen′ital.** Urogenital.

**Urinol′ogy** (*logos*, treatise). Urology.

**Urinom′eter** (*metron*, measure). Urometer. A small hydrometer for taking the specific gravity of urine.

**Urinom′etry.** The use of the urinometer to determine the specific gravity of the urine.

**U′rinoscopy** (*skopeo*, to see). Examination of the urine as a means of diagnosis.

**U′rinose** or **U′rinous.** Having the character of urine. Similar to urine.

**Urinse′rum.** If a small quantity of albuminous urine is injected repeatedly into the veins of an animal, in time the blood serum of that animal will acquire the property of causing a precipitate when added to albuminous urine; the serum possessing this property is called urinserum. This reaction is specific, for if serum albumin has been injected the blood serum will not precipitate serum globulin, and *vice versa*.

**Uri′tis** (*uro*, to burn). Inflammation following a burn.

**Urn′ing.** An individual whose sexual desires and inclinations are exclusively for persons of the same sex, a form of sexual hyperæsthesia and perversion.

**Urn′ism.** Sexual perversion.

**Uro-** (*ouron*, urine). In composition, urine.

**U′ro-ammo′nia.** Containing or composed of uric acid and ammonia, as *u.-a. calculus*.

**Urobacil′lus duclaux′i** (Miquel). A microorganism found in water and in offal. **U. freudenreich′ii** (Miquel), from the atmosphere, offal, dust, etc. **U. liquefa′ciens sep′ticus,** pathogenic bacillus resembling in appearance B. septicus vesicæ. **U. maddox′i** (Miquel), in water and offal. **U. pasteu′ri** (Miquel), detected in urine that is undergoing decomposition. **U. schützenberg′ii** (Miquel), in water and offal.

**Urobilin′.** Reddish-yellow pigment, identical with hydrobilirubin, present in small quantity in normal urine, abundant in high-colored urine of fevers, and giving characteristic absorption spectrum. **U. jaun′dice,** urobilinicterus.

**Urobilinic′terus.** Jaundice due to retention of urobilin in the blood, occurring chiefly after absorption of large extravasations of blood.

**Urobilin′ogen.** A chromagen in urine which when decomposed produces urobilin.

**Urobilinu′ria.** Condition in which a large amount of urobilin is present in the urine, which becomes reddish-brown.

**Urocanin′ic acid** (*caninus*, relating to a dog). $C_{12}H_{12}N_4O_4$. A crystalline acid found in the urine of the dog. The base formed by it on fusion is called *urocanin*, $C_{11}H_{10}N_4O$.

**U′rocele.** Swelling due to effusion of urine into the areolar tissue or the cavity of the scrotum.

**Urochesia,** u-ro-ke′ze-ah (*chezo*, to go to stool). A discharge of urine by the bowels.

**Urochloral′ic acid.** A compound of glucuronic acid with chloral, found in the urine after the administration of this drug.

**U′rochrome** (*chroma*, color). The chief coloring-matter of the urine. Yellowish, amorphous substance yielding by oxidation uroërythrin, and by decomposition with acids a dark material called uromelanin.

**Uroclep′sia** or **Uroclep′sis** (*klepto*, to steal). Unconscious dribbling of urine.

**Urocris′ia** (*krisis*, judgment). A judgment formed either of the urine or of disease after inspecting the urine. Also the crisis of a disease by uresis. *Urocriterion* is the symptom by which such judgment is formed.

**Urocri'sis.** Crisis of disease accompanied with an increased excretion of urine.

**Urocrite'rion.** See *Urocrisia.*

**Urocyanin'.** Uroglaucin.

**Urocyan'ogen** (*kyanos*, blue). Blue sediment seen especially in the urine of cholera patients.

**Urocy'anose.** Urocyanogen.

**Urocyano'sis.** Blue color of urine due to the presence of indican.

**Urocys'tic** (*kystis*, bladder). Relating to the urinary bladder.

**Urocys'tis** (*kystis*, bladder). Urinary bladder.

**Urocysti'tis.** Inflammation of the urinary bladder.

**Urocystocatar'rhus.** Cystorrhœa.

**Urodæ'um.** Continuation of the entodermic canal into the tail of the embryo.

**Urodial'ysis** (*dialysis*, dissolution). A partial and temporary suspension of the function of the kidney occurring in the course of some acute diseases, but without local mischief. It has been termed, when occurring in infants, *u. neonatorum;* in the aged, *u. senum.*

**Urodochi'um** (*dechomai*, to receive). Urinal.

**Urodyn'ia** (*odyne*, pain). Pain during micturition.

**Urœde'ma** (*oidema*, a swelling). Tumefaction produced by the escape of urine.

**Uroërythrin'** (*erythros*, red). See *Porphyruria.*

**Urofuscohæmatin'** (*fuscus*, brown). Brown pigmentary matter found in the urine in some diathetic diseases.

**Urogas'ter.** The urinary canals, considered collectively.

**Urogen'ital.** Genito-urinary. Relating or appertaining to the urinary and genital apparatus, as the urogenital organs. **U. ducts,** ducts of Müller and of Wolff in the human embryo. **U. si'nus,** cavity or canal in the embryo of the mammalia opening externally, in which the excretory ducts of the Wolffian bodies, the ureters, and the efferent parts of the generative apparatus terminate internally. It is prolonged into the urachus. Subsequently it becomes separated by a process of division into *pars urinaria* and *pars genitalis.* The former, extending toward the urachus, is converted into the urinary bladder; the latter forms the urethra in the male and the vagina in the female.

**Urogenous,** u-roj'en-us. Producing urine.

**Uroglaucin'** (*glaukos*, pale blue). See *Uroxanthin.*

**Uroglyco'sis** (*glykys*, sweet). Diabetes mellitus.

**Urogravim'eter** (*gravis*, heavy, *metron*, measure). Urometer.

**Urohæmatin'.** A substance resembling hæmatoporphyrin found occasionally in the urine. Urohæmatoporphyrin.

**Urohæmatoporphyrin'.** Purplish pigment having a characteristic absorption spectrum, found in urine of rheumatism.

**U'rol.** $C_7H_{22}O_6.2CO(NH_2)_2$. The quinate of urea, recommended as a remedy for gout, renal colic, and the so-called uric-acid diathesis; it restricts the formation of uric acid in the system.

**U'rolith** (*lithos*, stone). Urinary calculus.

**Urolithi'asis.** Lithia.

**Urolithol'ogy** (*lithos*, stone, *logos*, description). Description of or treatise on urinary calculi.

**Urolithot'omy.** Lithotomy.

**Urol'ogy.** Science in relation to the urine, especially as an aid to diagnosis and prognosis.

**Urolog'ical.** Relating to urology.

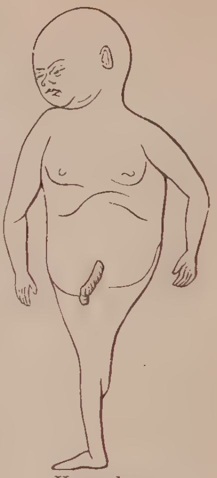
**Urol'ogist.** One skilled in the science of urology, or the study of urine.

**Uroluteïn'** (*luteus*, yellow). Yellow pigment found occasionally in human urine.

**U'romancy** (*manteia*, divination). Prognosis based upon examination of the urine.

**Uromelanin'.** See *Urochrome.*

**Urom'elus** (*oura*, tail, *melos*, limb). A monster in which the two lower limbs are united, very incomplete, and terminated by a single foot, which is almost always imperfect, the sole being turned forward.



Uromelus.

**Urom'eter** (*metron*, measure). Urinometer.

**Urom'phalus** (*urachus* + *omphalos*, navel). Monstrosity which consists in the protrusion of the urachus at the umbilicus.

**Uron'cus** (*onkos*, swelling). A urinary swelling.

**Uronol'ogy.** Urology.

**Urophaïn'.** Urobilin.

**Urophan'ic** (*phaino*, to show). Appearing or showing its presence in the urine.

**Uropheïn'.** Pigment substance in the urine.

**Uropherin'.** Lithium diuretin; lithio-theobromine salicylate. A white, soluble powder, resembling diuretin, and diuretic in the dose of gr. xv (1.0). It is produced by rubbing theobromine with lithium hydroxide and salicylate. **U. ben'zoate,** $LiC_7H_7N_4O_2$, mixture of theobromine and lithium benzoate; diuretic; dose, gr. xv (1.0). **U. sal'icylate,** mixture of lithium salicylate and lithium theobromine; diuretic.

**Urophthis'is.** Diabetes mellitus.

**Uropittin'.** Product of urochrome having a peculiar absorption spectrum.

**Uroplan'ia** (*plane*, wandering). The presence of urine in other parts than the urinary organs.

**Uropoie'sis** (*poieo*, to make). The secretion of urine by the kidney.

**Uropoiet'ic.** Relating to uropoiesis.

**Uropsam'mus** (*psammos*, sand). Urinary gravel.

**Uropyg'ial** (*oura*, tail, *pyge*, rump). Relating to the coccyx, or to the rump of birds. **U. gland,** a caudal sebaceous gland in birds, supplying the fatty secretion with which they anoint their feathers.

**Uropyg'ion.** Coccyx.

**Uroroseïn'.** An occasional pigment in normal urine; also occurring in conditions of grave nutritive disturbances.

**Urorrha'gia** (*rhage*, breaking forth). Diabetes. Polyuria.

**Urorrhodin'** (*rhodon*, rose). Purple coloring-matter in urine, a modification of hæmaphæin.

**Urorrhodin'ogen.** The chromagen which when decomposed produces urorrhodin.

**Urorrhœ'a.** Polyuria.

**Urorrhorrhœ'a** (*orrhos*, serum). Albuminuria.

**Urorubin'.** Garnet-red, crystalline pigment precipitated by adding ether to urine boiled with hydrochloric acid.

**Urorubrohæmatin'.** Pigment, dark red, observed in pemphigus leprosus, and in other rare forms of constitutional disease.

**Urosacin'** (*rosa*, rose). Urorrhodin.

**Uroscheocele,** u-ros'ke-o-seel (*osche*, scrotum, *kele*, rupture). Urocele.

**Uros'chesis** (*schesis*, suppression). Suppression of urine.

**U'roscopist.** One who makes a specialty of examination of urine.

**U'roscopy** (*skopeo*, to look at). Examination of urine.

**Urosep'sis** (*sepsis*, putrefaction). Septic condition arising from extravasation of urine.

**Urosep'tic.** Relating to the morbid effects of extravasation of urine.

**Urosin'.** Lithium quinate. Antilithic.

**Uro'sis.** Any disease of the urinary organs.

**Urospectrin'.** Pigment resembling hæmatoporphyrin found in healthy urine.

**Uros'tealith** (*stear*, fat, *lithos*, stone). A peculiar fatty ingredient of urinary calculi.

**Urosteato′ma.** Urostealith.

**Urosteno′sis.** Urethrostenosis.

**Urotheobromine′.** Paroxanthin.

**Urotox′ic.** Relating to the toxic substances eliminated in the urine from retention of effete products in the blood which should be eliminated by the kidneys. **U. coeffic′ient, U. u′nit,** see under *Urine,* § 15.

**Urotropin′.** $(CH_2)_6N_4$. Hexamethylene-tetramine. Formine. Produced by the action of formaldehyde on ammonia. Is said to increase the secretion of urine and the excretion of uric acid; renders the urine sterile; dose, gr. x (0.65).

**U′rous.** Having the character of urine. **U. acid,** uric acid.

**Uroxanthin′** (*uro,* urine, *xanthos,* yellow). A yellow coloring-matter in urine, decomposable into a red coloring-matter, urrhodin, and a blue, uroglaucin—the former having the same composition as indigo-red, the latter as indigo-blue.

**Uroxin′.** Alloxanthin.

**Uroze′mia** (*zemia,* loss). Diabetes. **U. albumino′sa,** Bright's disease of the kidney. **U. melli′ta,** diabetes mellitus.

**Urrhodin′.** See *Porphyruria.*

**Urrosacin′.** See *Porphyruria.*

**Ur′sal.** Combination of urea and salicylic acid. Antipyretic and antirheumatic.

**Ursin′.** Arbutin. Crystalline principle found in *Uva ursi;* diuretic and astringent.

**Ur′sone.** $C_{30}H_{48}O_3+2H_2O$. Tasteless principle from Uva ursi.

**Urti′ca** (*uro,* to burn). Common stinging nettle; ord. *Urticaceæ.* Used for medical and culinary purposes. The young shoots in the spring are diuretic and antiscorbutic. The pain produced by its sting is not to be compared to the torture occasioned by *U. stimulans* and *U. crenulata* of India, and still less to *U. urentissima* of Timor, called by the natives Daoun setan—devil's leaf—from the persistence and severity of the pain. **U. balear′ica,** U. pilulifera. **U. crenula′ta,** see *Urtica.* **U. dioi′ca,** urtica. **U. his′pida,** urtica. **U. iners′ mag′na fœtidis′sima,** galeopsis. **U. ma′jor,** U. dioica. **U. mi′nor,** U. urens. **U. mor′tua,** Lamium album. **U. pilulif′era,** pill-bearing nettle; the seed was formerly given in diseases of the chest. **U. pilulo′sa,** U. pilulifera. **U. roma′na,** U. pilulifera. **U. stim′ulans,** see *Urtica.* **U. u′rens,** dwarf nettle; a lesser variety of the nettle, said to check hemorrhage when prescribed internally. **U. urentis′sima,** see *Urtica.*

**Urtica′ria** (*urtica,* because the eruption resembles that produced by the stings of a nettle). Nettlerash, hives. Inflammatory affection characterized by the development of wheals, of whitish, pinkish, or reddish color, accompanied by stinging, pricking, or tingling sensations. It may be induced by eating shell-fish, eggs, nuts, etc., then called toxic u., or u. ab ingestis. **U. bullo′sa,** in which both wheals and blebs are present. **U. confer′ta,** in which lesions are grouped. **U. evan′ida,** in which wheals rapidly disappear. **U. facti′tia,** see *Autographism* and *Dermographism.* **Gi′ant u.,** angioneurotic œdema, u. œdematosa. **U. hæmorrhag′ica,** purpura urticans or urticata, in which the lesions are partly those of purpura and partly wheals, the latter being secondary. **U. maculo′sa,** a form of the disease in which the urticarial wheal is followed by a red patch. **U. marit′ima,** eruption produced by sea-bathing. **U. medicamento′sa,** from ingestion or local application of certain drugs. **U. nodo′sa,** u. in which the eruption is nodular. **U. œdemato′sa,** u. attended with much subcutaneous or submucous œdema. **U. papulo′sa,** lichen urticatus, in which the lesion is in the form of a papule with the characteristics of a wheal. **U. per′stans,** u. in which the wheals persist for some time. **U. pigmento′sa,** having pinkish, reddish, or yellowish wheals, inclining to persist and to be succeeded by yellowish, orange, greenish, or brownish stains or pigmented spots. **U. porcel′lana,** essera; urticaria. **Tox′ic u.,** u. following the ingestion of shell-fish or other substances which are toxic to the individual by reason of some idiosyncrasy. **U. tubero′sa,** in which more or less persistent nodes or tumors are formed. **U. vesiculo′sa,** u. in which the eruption is vesicular.

**Urtica′rial** or **Urtica′rious.** Relating to urticaria.

**Urtica′ta.** Urticaria hæmorrhagica.

**Ur′ticating.** Producing a stinging, burning sensation like that of nettle-rash.

**Urtica′tion.** Flagellation with nettles, used to excite the skin. Burning; itching.

**Uru′cu.** Terra Orleana.

**Uryl′ic acid.** Uric acid.

**Us′kow's pil′lars.** Two embryonic ridges developed in the posterior and lateral region, which by their union with the transverse septum form the diaphragm.

**Usne′a cra′nii huma′ni.** Lichen saxatilis. **U. flor′ida hir′ta, U. hir′ta,** or **U. plica′ta,** Lichen plicatus.

**Ustilag′inous.** Relating or belonging to ergot, as ustilaginous gangrene. See *Ergotism.*

**Ustila′go** (*uro, ustum,* to burn). Ergot. **U. may′dis,** corn smut or fungus which grows upon Zea mays.

**Us′tion** (*uro,* to burn). Act of burning or applying the actual cautery; effect of cauterization. Burn.

**Ustula′tion** (dim. of *ustio,* burn). Pharmaceutical operation of drying a substance by heat.

**Us′tus** (*uro, ustum,* to burn). Burnt or calcined.

**Usua′lia** (*usus,* use). See *Officinal.*

**U′sus** (use). Habit.

**U′ta.** Local affection, perhaps epithelial cancer, of Peru.

**U′ter** (a leather bottle). Uterus.

**Uteral′gia** (*uterus,* womb, *algos,* pain). Metralgia or pain in the uterus.

**U′teri adscen′sus.** Hysteria. **U. antever′sio,** anterior obliquity of the uterus. **U. carcino′ma,** cancer of the uterus. **U. convulsi′vus mor′bus,** epilepsy of the womb, so called. **U. cory′za,** leucorrhœa. **U. exulcera′tio,** ulceration of the uterus. **U. flex′io,** obliquity of the uterus. **U. inclina′tio,** obliquity of the uterus. **U. obliq′uitas,** obliquity of the uterus. **U. prona′tio,** anterior obliquity of the uterus. **U. pruri′tus,** nymphomania. **U. reflex′io comple′ta** or **retrover′sio,** posterior obliquity of the uterus. **U. rheu′ma,** leucorrhœa. **U. ul′cus,** ulceration of the uterus. **U. ver′sio incomple′ta,** obliquity of the uterus.

**U′terine** (*uterus,* womb). Belonging or relating to the womb. **U. appen′dages,** ovaries and Fallopian tubes. **U. ar′tery** arises from the hypogastric, either separately or with the umbilical, or from the internal pudic; passes up along the lateral parts of the vagina, ascends on the sides of the uterus, and divides into a number of tortuous branches which enter its tissue. **U. bougie′,** uterine sound. **U. broth′er,** one born of the same mother but different father; one of male twin fœtuses in utero. **U. col′ic,** metralgia. **U. fa′cies,** expression of the face peculiar to uterine affections. **U. gesta′tion,** period from conception to normal labor. **U. glands,** utricular glands. **U. hem′orrhoids,** see *Hemorrhoids.* **U. milk,** fluid rich in albuminous and fatty particles, found between the villi of the placenta in ruminants. **U. mur′mur,** bruit placentaire. **U. mus′cle,** fleshy fibres at the fundus of the uterus; term sometimes applied to the whole muscular arrangement of the uterus. **U. preg′nancy,** normal pregnancy. **U. rush,** bruit placentaire. **U. si′nuses,** large, tortuous channels found in the parietes of the uterus. **U. souffle,** sound heard on auscultation over the abdomen in the fifth or sixth month of pregnancy. **U. sound,** see *Sound, uterine.* **U. stran′gury,** dysmenorrhœa.

**Uteri′nus fra′ter.** Uterine brother.

**Uteri′tis.** Inflammation of the uterus. Metritis is a more correct term.

**Utero-.** In composition, relating to the uterus.

**Uterocer′vical.** Relating to the uterus and its cervix. **U. canal′,** lower uterine segment.

**Uterofixa′tion.** Hysteropexy.

**Uterogesta'tion** (*uterus*, womb, *gesto*, to carry). Pregnancy.

**Uteroma'nia.** Nymphomania.

**U'tero-ova'rian.** Relating to the uterus and ovary. **U.-o. ar'tery,** see *Spermatic artery.*

**Uteropex'ia** or **U'teropexy** (*pexis*, fastening). Hysteropexy.

**Uteroplacen'tal.** Relating to the uterus and placenta. **U. vac'uum,** vacuum produced by traction upon the funis of a detached placenta, which causes it to cling to the uterine walls.

**Uterosa'cral folds.** See *Uterus.*

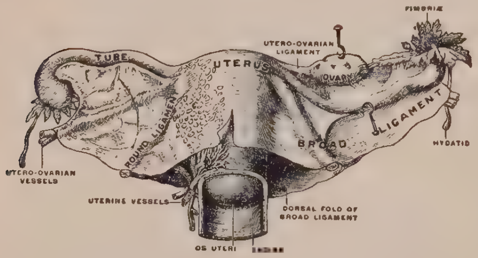
**U'terotome.** Hysterotome.

**Uterot'omy.** Hysterotomy.

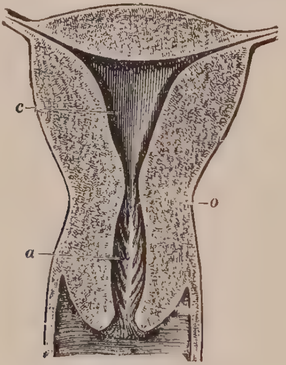
**Uterovaginal,** u-ter-o-vaj'i-nal. Relating to the uterus and vagina. **U. plex'us,** plexus situated at the sides and upper part of the vagina and cervix.

**Uteroves'ical.** Relating to the uterus and bladder. **U. fos'sa,** vesico-uterine pouch.

**U'terus.** The womb. The uterus is a hollow, symmetrical organ, having the shape of a truncated conoid, situated in the pelvis, between the bladder and rectum, above the vagina, below the convolutions of the small intestine. It is two inches broad at its highest part, and becomes narrower toward the vagina, terminating in a contracted portion, the cervix or neck, the rest of the organ being called the body. From its fundus, or upper portion, the Fallopian tubes pass. The mouth is called os uteri, os tincæ, os uteri externum, orificium vaginale. See *Os uteri.* At the point where the body is continuous, below, with the neck the cavity is slightly constricted, forming the internal orifice, os uteri internum, os internum, isthmus or ostium uterinum canalis cervicis uteri. Between these is the cervical canal. The cervix, or portion projecting into the vagina, is called the vaginal portion or portio vaginalis. The uterus is composed: 1. Of a serous membrane, the peritoneum, reflected upon the uterus from the posterior surface of the bladder and anterior surface of the rectum. These folds of peritoneum are called the anterior and posterior ligaments. The former are the vesico-uterine, the latter the recto-uterine folds or plicæ semilunares; the pouch formed by the latter is Douglas's cul-de-sac or space. The serous membrane forms also the ligamenta lata, alæ vespertilionis, or broad ligaments. These contain, above, the Fallopian tube; beneath and anteriorly, the round ligaments; and, behind, the ovary. 2. Muscular coat. 3. Mucous coat. The arteries proceed from the spermatic and hypogastric. The veins follow the same course and bear the same name as the arteries; they are tortuous, and form large sinuses in the parietes of the organ, called *uterine sinuses.* The nerves proceed from the sciatic and hypogastric plexuses. The lymphatic vessels are multiplied, and during pregnancy acquire enormous dimensions.



Uterus and appendages, front view. On the left side the tube is pulled down, the ovary lifted up. (Gerrish.)



Uterus of a virgin, in coronal section: *a*, cervix; *c*, corpus; *o*, internal os.

The uterus is said to be *one-horned, u. unicornis,* when only half of the organ is developed; a second rudimentary horn may, however, be present; *two-horned, u. bicornis,* when, in consequence of incomplete coalescence of Müller's ducts, the body of the organ is divided into two divergent horns.

**U'terus acol'lis,** uterus the neck of which is wanting or rudimentary. **U. bicor'nis,** see *Uterus.* **U. bicor'nis unicel'lis,** in this form a median vertical fold of peritoneum divides the rectovaginal pouch, and, continuing to the bladder, divides the uterovesical pouch into two shallow depressions. **U. bif'idus,** double uterus; one separated into two cavities. **U. bif'oris,** uterus in which the external os is divided into two parts by an anteroposterior septum. **U. bilocula'ris,** uterus bipartitus; double uterus, due to arrested development. **U. cordifor'mis,** heart-shaped appearance, due to arrested development. **U. diadel'phys,** a uterus in which there has been separate development and non-coalescence of the ducts of Müller; not strictly a double uterus. **U. du'plex,** double uterus, uterus bilocularis. **Epistax'is of the u.,** hemorrhage occurring a few days after ovariotomy. **Grav'id u.,** pregnant uterus. **Her'nia of the u.,** hysterocele. **Hour'glass contrac'tion of the u.,** irregular central constriction, by which the placenta is retained in a cavity after the birth of the child. **Incarcera'tion of the u.,** strangulation of the uterus due to pressure or constriction. **U. inclina'tus,** oblique position of the uterus. **Iner'tia of the u.,** deficiency in uterine force during parturition. **In'fantile u.,** undeveloped uterus. **Inver'sion of the u.,** uterus displaced and turned inside out. **Involu'tion of the u.,** see *Involution.* **Ir'ritable u.,** neuralgia of the uterus; deep-seated pain in the lower part of the abdomen, the back, and loins, generally diminished by lying down and increased by exercise, and more severe for a few days preceding and during menstruation. **U. masculi'nus,** utriculus or sinus pocularis of the male urethra; see *Ejaculatory ducts.* **U. obli'quus,** oblique position of the uterus. **One-horned u.,** see *Uterus.* **Preg'nant u.,** uterus containing an embryo. **Rup'ture of the u.,** laceration of the womb; this accident occurs during labor, and may be suspected to have taken place when the child's head suddenly recedes during a pain, with vomiting, sinking of the pulse, cold sweats, etc. **U. sep'tus,** uterus bilocularis. **Subinvolu'tion of the u.,** see *Subinvolution.* **U. subsep'tus,** uterine cavity divided by an incomplete septum. **Two-horned u.,** u. bicornis. **U. unicor'nis,** see *Uterus.*

**U'tricle** (dim. of *uter*, small bag). Small cell, vesicle, or depression. The larger sac in the vestibule of the ear communicating with the semicircular canals. The sinus pocularis of the male urethra.

**Utric'ular.** Relating to a utriculus, or resembling a small bag or bottle. **U. glands,** glands or follicles concerned in the formation of the decidua. **U. state,** peculiar condition (small, hollow globules filled with fluid) assumed by sulphur and other substances when deposited after undergoing sublimation.

**Utriculi'tis.** Inflammation of the utricle of the ear or of the prostatic utricle or vesicle.

**Utric′ulosac′cular canal′.** Canal from the utricle, which when it unites with another canal from the saccule forms the ductus endolymphaticus.

**Utric′ulus.** Utricle. **U. commu′nis,** utricle of the vestibule. **U. lac′teus,** receptaculum chyli. **U. masculi′nus,** u. prostaticus, sinus pocularis. **U. primordia′lis,** delicate membrane, of protein composition, lining the cell-wall of vegetable structures, and from the exterior of which the layer of cellulose is secreted. **U. pro′prius,** middle and lower part of the utricle of the ear, comprising the superior and inferior sinuses. **U. prostat′icus,** prostatic vesicle; remains of Müller's duct in the male.

**U′va** (a grape or a bunch of grapes). Uvula. Grape; see *Vitis vinifera.* **U. inver′sa** or **U. lupi′na,** Paris. **U. pas′sa,** see *Vitis vinifera.* **U. ur′si** (Ph. U. S.), the leaves of Arctostaphylos uva ursi, or bearberry; tonic and diuretic; employed in cystitis and other affections of the genito-urinary organs; dose, ʒij–iv (8.0–16.0) in infusion. The dose of the glucoside, *arbutin,* is gr. v–xv (0.32–1.0). The official preparations are the *extractum u′væ ur′si;* dose, gr. j–v (0.065–0.32); and the *e. u. u. flu′idum;* dose, ʒj–iv (4.0–16.0). **U. vulpi′na,** Paris.

**U′væ.** Raisins; see *Vitis vinifera.* **U. corinthi′acæ,** see *Vitis corinthiaca.* **U. pas′sæ,** dried grapes, raisins; see *Vitis vinifera.* **U. pas′sæ majo′res,** see *Vitis vinifera.* **U. pas′sæ mino′res,** see *Vitis corinthiaca.* **U. pas′sæ so′le sicca′tæ,** see *Vitis vinifera.* **U. ur′sæ fo′lia** (Ph. Br.), see *Uva ursi.*

**Uva′ria tril′oba.** See *Carica papaya.*

**Uva′tio** (*uva,* a grape). Ceratocele; staphyloma.

**U′vea** (*uva,* a grape). Posterior layer of the iris, so called from the black and very thick varnish that covers it. Also applied by some anatomists to the iris, ciliary processes, and choroid membrane. **Com′missure of the u.,** ciliary ligament.

**U′veal.** Relating to the uvea. **U. ar′teries,** short posterior ciliary arteries. **U. tract,** choroid membrane or vascular tunic of the eye.

**Uveït′ic.** Relating to or resembling uveitis.

**Uveï′tis.** Rhagoideitis; inflammation of the uvea. **Ante′rior u.,** parenchymatous keratitis, implicating also the anterior part of the uvea.

**U′vic acid.** Racemic acid.

**Uvigena,** u-vij′en-ah. Uvula.

**Uvigera,** u-vij′er-ah. Uvula.

**U′vula** (*uva,* a grape). A fleshy appendix or prolongation situated on the cone-shaped middle or free edge of the velum palati. **U. cerebel′li,** eminence or under surface of the cerebellum, on the median line, behind the nodulus; see *Vermiform process, inferior.* **U. decid′ua,** staphylœdema. **U. elonga′ta,** staphylœdema. **Lieutaud's′ u.,** a median ridge in the trigone of the bladder; see *Urinary bladder.* **U. relaxa′ta,** staphylœdema. **U. ver′mis,** uvula of the cerebellum. **U. vesi′cæ,** slight elevation on the mucous membrane projecting from the lower and anterior part of the bladder into the orifice of the urethra.

**Uvulapto′sis** (*ptosis,* a falling). Relaxation of the uvula.

**U′vular.** That which belongs to the uvula. **U. glands** are small follicles belonging to the mucous membrane covering the uvula.

**Uvula′ria** (so called from the flowers hanging like the uvula). Ruscus hypoglossum. **U. grandiflo′ra** and **U. sessilifo′lia** have properties similar to those of **U. perfolia′ta,** smaller bellwort; indigenous; ord. *Melanthaceæ;* the root, when fresh, is subacrid and mucilaginous; a decoction of the plant is used in sore mouth; it is said to cure the bites of rattlesnakes.

**Uvula′ris.** Azygos uvulæ muscle.

**U′vulatome.** Instrument for excision of the uvula.

**Uvulat′omy** (*tome,* incision). Excision of the uvula.

**Uvulato′sis.** Prolapse of the uvula.

**Uvuli′tis.** Inflammation of the uvula; when in a slight degree, called *hypostaphylitis.*

**Uvulopto′sis** (*ptosis,* falling). Relaxation of the uvula.

**U′vulotome.** Instrument for excision or amputation of the uvula.

**Uvulot′omy.** Excision of the uvula.

**Uzaidel′la.** Chenopodium ambrosioides.

# V.

**V.** Chemical symbol of vanadium; abbreviation for vision.

**Vaccigenous,** vak-sij′en-us. Producing vaccine.

**Vacci′na** (*vacca*, a cow). Cowpox, kinepock. Cowpox is a disease of the cow, arising spontaneously, or perhaps from the smallpox contagion of man, or from the matter of grease in horses conveyed by the milkers, which if transmitted to man by means of inoculation renders him immune against smallpox contagion. The promulgation of this property of the vaccine virus was made by Dr. Jenner in 1798. The *vaccine virus* is usually taken from the heifer, being regarded as safer than that taken from the human eruption. The characteristic lesion of the cowpox eruption is a semitransparent, pearl-colored vesicle with a circular or somewhat oval base; its upper surface, until the end of the eighth day, being more elevated at the margin than in the centre, and the margin itself being turgid, shining, and rounded, so as often to extend a little over the line of the base. The vesicle is filled with clear lymph, contained in numerous little cells that communicate with each other. After the eighth or ninth day from the insertion of the virus it is surrounded by a bright red, circumscribed areola, which varies in diameter, in different cases, from a quarter of an inch to two inches, and is usually attended with considerable swelling and hardness of the adjoining areolar membrane. This areola declines on the eleventh or twelfth day; the surface of the vesicle then becomes brown in the centre, and the fluid in the cells gradually concretes into a hard, rounded scab or crust of a reddish-brown color, which at length becomes darker, contracted, and dry, but is not detached until three weeks after vaccination. It leaves a permanent circular cicatrix about five lines in diameter and a little depressed, the surface being marked with very minute pits or indentations, denoting the number of cells of which the vesicle had been composed. This is the progress of the *genuine cowpox*. At times fever, vaccinal fever, occurs about the ninth or eleventh day after vaccination, but at others not the slightest indisposition is felt. Aberrations from this progress occur which must be attended to, as the same preservative influence is not exerted by *irregular* or *spurious cowpox*. If the eruption runs speedily to a height, has an areola too early, is irregular at its edges, and contains pus instead of a limpid fluid, it cannot at all be depended upon. In addition to the vesicle which develops itself at the seat of vaccination, an eruption of a similar kind, *vacciniola*, sometimes occurs in other parts of the body, running its course at times with the other. To smallpox, which may occur in a modified form after vaccination, the term *varioloid* has been given.

**Vac′cinal.** Relating to vaccina or vaccination. **V. fe′ver,** a slight fever occurring occasionally about the ninth to the eleventh day after vaccination.

**Vaccina′tion** (*vacca*, cow). Cowpox inoculation, Jennerian inoculation. An operation which consists in applying the vaccine virus to the skin denuded of its cuticle, so that it may enter into the absorbents. The part of the arm about the insertion of the deltoid is usually selected as the seat of the inoculation. The skin should be carefully cleansed and put upon the stretch; then with a lancet, ivory point, new steel pen, or other aseptic instrument the skin should be cross-hatched and the lymph rubbed in and allowed to dry, after which the spot should be covered by lint or a bandage. The best period for primary vaccination is at the third or fourth month of life. A person exposed to the contagion of smallpox should be revaccinated.

**Vaccina′tionist.** One who favors the practice of vaccination.

**Vac′cinator.** One who inoculates for the cowpox. Also an instrument employed for this purpose.

**Vaccine′.** Relating or appertaining to vaccination. Also vaccine virus. **V. farm,** a farm in which vaccine animal virus is obtained by regular, systematic inoculation of heifers. **V. point,** a piece of quill coated at the point with vaccine matter. **V. rash,** general exanthem sometimes accompanying the other symptoms of vaccina, in the form either of diffused erythema or of a vesicular eruption; vacciniola. **V. vi′rus,** lymph obtained from the vaccinal eruption occurring in dried form, as *crusts* or *points*, or in fluid form, which is sold in the shops in *tubes;* virus obtained from human eruptions is known as *humanized vaccine* or *virus*, while that from the vesicles of the cow is called *bovine vaccine* or *virus*.

**Vaccinel′la** (dim. of vaccina). Spurious cowpox.

**Vaccin′ia.** Vaccina. **V. palus′tris,** Vaccinium oxycoccos.

**Vaccin′ifer** (*fero*, to carry). An instrument intended as a substitute for the lancet in vaccination.

**Vaccin′iform.** Having resemblance to cowpox.

**Vacciniin′.** Arbutin.

**Vaccinin′.** Bitter principle obtained from Vaccinium vitis idæa.

**Vaccini′ola.** Eruption resembling varicella occurring occasionally as a result of vaccination.

**Vac′cinist.** Vaccinator.

**Vaccin′ium crassifo′lium.** Plant similar to uva ursi in therapeutic properties, especially used in catarrhal inflammation of the genito-urinary tract. **V. macrocar′pon** see *Vaccinium oxycoccos*. **V. myrtil′lus,** myrtleberry, bilberry, bleaberry, whortleberry, black whorts; ord. *Vacciniaceæ*. The berries —*Baccæ myrtillorum*—are esteemed to be antiscorbutic and astringent; used as an article of diet. **V. ni′grum,** V. myrtillus. **V. oxycoc′cos,** moorberry, cranberry, mossberry, swamp redberry, sourberry; the berries are pleasantly acid and cooling; the common American cranberry is from *Vaccinium macrocarpon, Oxycoccus macrocarpus*. **V. pennsylva′nicum,** low blueberry; the leaves and bark of the root are astringent. **V. puncta′tum,** V. vitis idæa. **V. resino′sum,** Gaylussacia resinosa. **V. stamin′eum,** buckberry, squaw huckleberry, deerberry; the leaves are astringent. **V. vi′tis idæ′a,** red bilberry, Alpine cranberry, whortleberry, cowberry; leaves are astringent; the ripe berries are pleasantly acid and refrigerant.

**Vacciniza′tion.** Inoculation by repeated introductions of vaccine virus.

**Vaccinosyph′ilis.** Vaccinal syphilis. Syphilis transmitted during vaccination, either by infected instruments or by humanized virus taken from a syphilitic subject.

**Vacci′nus.** Vaccine.

**Vacci′ola.** Vaccina. **V. lepro′sa,** vaccinella. **V. scutella′ta,** vaccina. **V. spu′ria,** vaccinella. **V. ve′ra,** vaccina.

**Vacilla′tio** (*vacillo*, to waver). Staggering; waddling. **V. den′tium,** looseness of the teeth.

**Vac′uolar.** Relating to or having vacuoles.

**Vac′uolated.** Vacuolar.

**Vacuola′tion.** Condition in cells which have undergone granular degeneration, in which they contain several large spherical air spaces or vacuoles.

**Vac′uole.** Small air-cell or globular space in the interior of cells, containing either oil or a clear liquid.

**Vacuoliza′tion.** Vacuolation.

**Vac′uum.** An empty space, one containing neither air nor any other gas or vapor. **V. cham′ber,** depression in a dental plate from which air is exhausted. **Torricel′lian v.,** the space above the mercury in the tube of a barometer. **V. tube,** Geissler or Crookes tube. **Uteroplacen′tal v.,** see *Uteroplacental.*

**Vag′abond pains.** Wandering pains, as in locomotor ataxia.

**Vagabondis′mus.** Vagabond's discoloration or disease; dark-brown discoloration of the skin from exposure, want of cleanliness, or pediculosis; sometimes mistaken for Addison's disease.

**Vag′abond's disease′.** Vagabondismus. **V.'s pigmenta′tion,** dark discoloration of the skin caused by irritation and scratching in pediculosis corporis.

**Va′gal.** Relating to the vagus nerve.

**Vagi′na** (a sheath). Theca. A term extended to many parts which serve as envelopes to others. Vulvo-uterine canal; a cylindrical canal, five or six inches long, situated within the pelvis between the bladder and rectum. It communicates by one extremity, *ostium* or *orificium* or *os externum vaginæ,* with the vulva; by the other, *fundus,* with the womb, *pars* or *portio vaginalis uteri,* the neck of which it embraces. It is lined internally by a mucous membrane, which presents along the anterior and posterior walls a longitudinal ridge, called the columns of the vagina, columnæ rugarum, and is partly closed in young females by the hymen and carunculæ myrtiformes. Around the mucous membrane is a layer of spongy erectile tissue and a cellulovascular membrane. The following statements have been made as to measurements of the vagina (Vierordt): Length of the posterior wall from the hymen to the upper point of the fornix, 70–80 mm.; length at the anterior wall, 55–60; breadth, about 30; thickness of the wall, 2; epithelium of mucous membrane, 0.15–0.2; papillæ, 0.13–0.18 in length. **V. bul′bi,** capsule of Ténon. **V. cellulo′sa,** epineurium; perimysium. **V. cor′dis,** pericardium. **Doub′le v.,** malformation in which there is a septum dividing the v. into two. **V. fem′oris,** fascia lata aponeurosis. **V. fibro′sa,** sheath of the flexor tendons. **V. fibro′sa ner′vi op′tica,** fibrous sheath of the optic nerve. **V. funic′uli umbilica′lis,** see *Funiculus umbilicalis.* **V. Glisso′nii,** capsule of Glisson. **V. malleola′ris exter′na,** retinaculum tendinum perinæorum. **V. masculi′na,** see *Ejaculatory ducts.* **V. muco′sa,** bursa mucosa. **V. mulie′bris,** vagina. **V. muscula′ris,** perimysium. **V. nervo′rum,** neurilemma. **V. oc′uli,** v. bulbi. **V. pe′nis,** vagina. **V. pi′li,** see *Hair.* **Pol′ypus of v.,** see *Polypus.* **V. por′tæ,** capsule of Glisson. **Ru′gæ of the v.,** elevated folds of the mucous membrane of the vagina. **V. synovia′lis,** bursa mucosa. **V. ten′dinis,** sheath of a tendon. **V. tendino′sa cru′ris,** fascia lata. **V ten′dinum,** synovial sheath. **V. uteri′na,** vagina. **V. vaso′rum crura′lium,** crural sheath. **V. of the ve′na por′ta,** sheath of the vena porta; the areolar membrane that accompanies the divisions of the vena porta into the substance of the liver.

**Vaginæfixu′ra.** Vaginal fixation.

**Vaginal,** vaj′in-al (*vagina,* a sheath). Relating or pertaining to the vagina or to a sheath. **V. ar′tery** arises from the hypogastric, or from the uterine, vesical, internal, pudic, umbilical, etc., and sends its branches first to the lateral parts of the vagina, and afterward to the anterior and posterior surfaces. **V. bil′iary plex′us,** a plexus of ramifications of the hepatic duct through the capsule of Glisson. **V. branch′es of the ve′na por′ta,** those which have to pass through the sheath of the capsule of Glisson previous to entering the interlobular spaces. In this course they form the vaginal plexus. There are also vaginal branches, and a vaginal plexus formed by the hepatic artery. **V. coat of the eye,** capsule of Ténon. **V. coat of the tes′ticle,** the serous membrane enveloping the testicle; the tunica vaginalis forms a closed sac investing the testicle and epididymis, without containing them in its cavity, and reflected so as to form a bag around the circumference of the testis; hence it is divided into tunica vaginalis propria and tunica vaginalis reflexa. **V. culs-de-sac,** two pouches, the anterior between the uterus and bladder; the posterior, or Douglas's, between the uterus and the rectum. **V. douche,** apparatus for bathing the vagina with fluids. Injection of fluid into the vagina. **V. fixa′tion,** v. hysteropexy. **V. gan′glia,** see *Spermatic ganglion.* **V. hysterec′tomy,** excision of the uterus through the vagina. **V. hys′teropexy,** fixation of a retroverted uterus in an anteverted position by attachment to the anterior vaginal cul-de-sac. **V. ovariot′omy,** removal of an ovarian tumor through an incision in the vagina. **V. plex′us,** see *Vaginal branches of the vena porta.* **V. pro′cess of the tem′poral bone,** a bony crista which embraces the base of the styloid process. **V. pulse,** pulsation of the vaginal artery, which is increased in pregnancy, during abortion, labor, etc. **V. respira′tion,** rise and fall of the vagina under the influence of similar movements on the part of the diaphragm. **V. suppos′itories,** see *Suppositories* and *Pessary.*

**Vaginalec′tomy.** Excision of the tunica vaginalis.

**Vaginali′tis.** Inflammation of the tunica vaginalis.

**Vaginate,** vaj′in-ate. In a sheath.

**Vaginec′tomy.** Excision of the tunica vaginalis or of the vagina.

**Vaginis′mus.** Spasm of the sphincter muscle of the vagina, with hyperæsthesia of the surrounding parts.

**Vagini′tis.** Inflammation of the vagina. When occurring during childbirth it is called puerperal vaginitis. When accompanied with leucorrhœa and the growth of papillary projections on the surface of the membrane it is called, from its granular appearance, vaginitis granulosa, granular vaginitis. It may also be of venereal origin, gonorrhœal vaginitis. **V. tes′tis,** peridídymitis.

**Vagino-abdom′inal.** Relating to the vagina and abdomen.

**Vaginodyn′ia** (*odyne,* pain). Pain in the vagina.

**Vaginofixa′tion.** Vaginal fixation; vaginal hysteropexy.

**Vaginomyco′sis.** Mycosis, or fungous disease of the vagina.

**Vaginoperitone′al.** Relating to the vagina and peritoneum.

**Vaginot′omy.** Incision into the vagina; colpotomy.

**Vaginoves′ical.** Relating to the bladder and vagina.

**Vagitus,** vaj′it-us (*vagio,* to cry). Cry of the newborn child; squalling. **V. uteri′nus,** sound made by the child while still in utero, but during labor. **V. vagina′lis,** crying of the child during birth, while the head is still in the vagina.

**Va′go-accesso′rius.** Pneumogastric and spinal accessory nerves considered as one trunk.

**Vagot′omy.** Section of the vagus nerve.

**Va′grant cells.** See *Amœboid.*

**Va′gus** (wandering). Pneumogastric nerve. **V. a′rea,** see *Area.* **V. pneumo′nia,** pneumonia produced by division of the vagus nerve, the lungs becoming congested and their nutrition interfered with.

**Valan′ida.** Fagus sylvatica.

**Valan′tia apari′ne.** Galium aparine.

**Va′lence** or **Va′lency.** The combining capacity of an atom measured by that of an atom of hydrogen.

**Valen′tin's cor′puscles.** Minute collections of amyloid matter in nerve tissue. **V.'s gan′glion,** an enlargement occasionally seen on the superior maxillary nerve. **V.'s ves′icles,** see *Molecule.*

**Val′eral.** Amylic aldehyde; see *Aldehyde.*

**Val′eren.** A terpine entering into the composition of valerianic acid.

**Vale′rian, Amer′ican.** Cypripedium luteum; Valeriana pauciflora. **Gar′den v.,** Valeriana phu. **Greek v.,** Polemonium reptans. **Offic′ial v.,** valeriana. **Wild v.,** Senecio aureus; valeriana; V. pauciflora.

**Valeria′na.** (Ph. U. S.) The rhizome and roots of wild or official valerian; ord. *Valerianaceæ.* The official valerian is the rhizome and rootlets of V. officinalis. It is used in a variety of nervous complaints. It has a strong, fetid odor; bitterish, subacrid, and warm taste. The following are the official preparations: *Extrac′tum valeria′næ flu′idum;* dose, ʒss–j (2.0–4.0). *Tinctu′ra v.;* dose, ʒj–iv (4.0–16.0). *T. v. ammonia′ta* (also Ph. Br.); dose, ʒss–j (2.0–4.0). The kooyah root or kooyahs of the Indians in Oregon, used by them for making a bread called *supale,* is said to be that of *Valeriana officinalis* or *Valeriana edulis,* probably the same as that sometimes written *kous;* it is frequently called tobacco root. **V. capen′sis,** South African species, has similar virtues. **V. cel′tica,** the roots of this Alpine plant are stomachic, carminative, and diuretic. **V. denta′ta,** corn salad, a wholesome, succulent plant, cultivated in Europe as a salad; it is antiscorbutic and gently aperient. **V. edu′lis,** see *Valeriana.* **V. in′dica,** the rhizome of this plant is official in the Indian and Eastern Colonies addendum to the Ph. Br. **V. jataman′si,** spikenard, has properties similar to those of V. officinalis. **V. locus′ta,** V. dentata. **V. ma′jor,** V. phu. **V. mi′nor,** valeriana. **V. officina′lis,** valeriana. **V. pauciflo′ra,** American or wild valerian, has the properties of other valerians. **V. phu,** garden valerian; the root has been recommended in rheumatism, especially in sciatica and in epilepsy. **V. saxat′ilis,** V. celtica. **V. spi′ca,** Nardus indica. **V. sylvat′ica,** see *V. pauciflora.* **V. walli′chii,** V. indica.

**Vale′rianate.** Combination of valerianic acid with a base. Valerianates of ammonium, iron, quinine, and zinc are used medicinally. See *Zinci valerianas,* etc.

**Valerian′ic** or **Vale′ric acid.** Acid found in valerian, angelica root, and elsewhere; also produced by oxidation of fusel oil and by putrefaction of cheese and other animal matters; has been employed as a nervine in doses of ♏v–xv (0.32–1.0).

**Valeridin′.** Sedatin; used in nervous affections, in doses of gr. viij–xv (0.5–1.0) three or four times daily; antipyretic and antineuralgic.

**Valerine′.** Alkaloid obtained from valerian.

**Val′erol.** Valerian camphor, changed by the air into valerianic acid.

**Val′eryl-phenetidin′.** Sedatin.

**Valetudina′rian.** Valetudinary.

**Valetudina′rianism.** A lasting state of poor health.

**Valetudina′rium** (*valetudo,* health). Hospital.

**Valetu′dinary.** Valetudinarian. One of delicate health or subject to frequent diseases. An invalid.

**Valetu′do.** Health. **V. adver′sa,** disease. **V. bo′na,** good health. **V. com′moda,** health. **V. secun′da,** health.

**Val′goid.** Like valgus.

**Val′gus.** Bowlegged. The term *genu valgum* is incorrectly, but almost universally, applied to knock-knee. **Hal′lux v.,** adduction of the great toe which overlaps its neighbors. **Pes** or **Tal′ipes v.,** clubfoot in which the person walks on the inner surface of the everted foot. **V. spu′rius,** flat foot.

**Val′idol.** Combination of tincture of valerian and menthol, used in hysteria and epilepsy.

**Vali′ga.** Tincture of jalap.

**Val′late.** Cupped. **V. papil′læ,** circumvallate papillæ.

**Vallec′ula** (dim. of vallis). Valley. An anatomical groove or furrow. **V. cerebel′li,** see *Valley.* **V. cor′dis,** depression extending from the anterior to the posterior longitudinal furrow at the apex of the heart. **V. glossoepiglot′tica,** fossa glossoepiglottica. **V. ova′ta,** fissure of the liver in which the gall-bladder reposes. **V. Reil′ii,** fissure of Sylvius. **V. Syl′vii,** fissure of Sylvius. **V. un′guis,** see *Nail.*

**Valleix's** (val-laze′) **points.** Points of tenderness occurring along the course of nerves in certain inflammatory and neuralgic conditions.

**Vallet's** (val-laze′) **mass.** Massa ferri carbonatis.

**Val′ley.** The deep fissure on the inferior part of the cerebellum which divides it into two symmetrical portions and receives the medulla oblongata.

**Val′lis.** Valley. **V. ala′rum,** valley of the armpits; axilla. **V. fem′orum,** vulva.

**Val′lum** (a palisaded rampart). The eyebrow or supercilium. Also a species of bandage.

**Valo′nia.** Cups of large acorns of Quercus ægilops, native of the Levant, containing a large percentage of tannic acid.

**Valsal′va's exper′iment.** This consists in inflation of the Eustachian tube by closing the nose and mouth, and making forcible expiration. **V.'s lig′ament,** ligamentous band uniting the pinna of the ear to the temporal bone. **V.'s li′quor,** endolymph of the labyrinth. **V.'s meth′od,** mode of treatment for internal aneurysms proposed by Valsalva, consisting of general depletion by venesection, purgatives, and restricted diet. **V.'s si′nus,** sinus aorticus.

**Val′va.** Valve. **V. Tul′pii,** ileocæcal valve.

**Valve** (*valvæ,* folding doors). Any membrane or duplicature of a membrane which prevents a reflux in the vessels and canals of the body. There are some valves whose functions appear to retard or to modify the course of the contents through canals, etc. See also *Valvula* and *Valvulæ.* **Aor′tic v.,** semilunar fold at the opening of the left ventricle of the heart into the aorta. **V. of Amussat′,** see *Gall-bladder.* **V. of Bauhin′,** see *Bauhin.* **V. of Béraud′,** see *Béraud.* **Bicus′pid v.,** mitral v. **V. of Boch′dalek,** see *Bochdalek.* **Cor′onary v.,** see *Coronary.* **V. of Eusta′chius,** Eustachian valve. **V. of Fallo′pius,** valve of Bauhin. **V. of Foltz,** see *Foltz.* **V. of gall′-bladder,** valve of Amussat. **V. of Ger′lach,** see *Gerlach.* **V. of Has′ner,** see *Hasner.* **V. of Heis′ter,** see *Gall-bladder* and *Heister.* **V. of Hous′ton,** see *Houston.* **V. of Husch′ke,** see *Huschke.* **Ileocæ′cal v.,** valve of Bauhin. **Ileocol′ic v.,** valve of Bauhin. **V. of Kerk′ring,** valvulæ conniventes. **V. of Kraus′e,** valve of Béraud. **V. of Mercier′,** see *Mercier.* **Mi′tral v.,** see *Heart* and *Mitral.* **V. of Morgagn′i** see *Morgagni.* **Pul′monary v.,** see *Pulmonary.* **Pylor′ic v.,** a tubercle in the neck of the bladder at its lowest part; a fold of mucous membrane covering the sphincter of the pylorus; the whole pylorus is sometimes so called. **Rec′tal v.,** one of the transverse folds in the mucous membrane of the rectum. **V. of Ro′senmüller,** see *Rosenmüller.* **Semilu′nar v.,** see *Heart* and *Semilunar.* **V. of Tail′lefer,** see *Taillefer.* **V. of Tari′ni,** velum medullare posterius. **V. of Thebe′sius,** coronary fold of membrane protecting the coronary sinus. **Tricus′pid v.,** see *Heart* and *Tricuspid.* **V. of Tul′pius,** valve of Bauhin. **V. of Varo′lius,** valve of Bauhin. **V. of Vieus′sens,** valvula Vieussenii. **V. of Wil′lis,** valve of Vieussens.

**Valvot′omy.** Section of a valve, especially of the so-called valves of the rectum.

**Val′vula** (dim. of valva). Valve. **V. Bauhi′ni,** valve of Bauhin. **V. cæ′ci,** valve of Bauhin. **V. cerebel′li,** valvula Vieussenii. **V. co′li,** valve of Bauhin. **V. Eustach′ii,** Eustachian valve. **V. fos′sæ navicula′ris,** transverse duplicature of mucous membrane in the urethra at the proximal end of the fossa navicularis. **V. guiffartia′na,** see *Thebesius, veins of.* **V. Heis′teri,** see *Gall-bladder.* **V.**

**hymena′lis ure′thræ viri′lis,** valvula fossæ navicularis. **V. il′ei**, valve of Bauhin. **V. lacryma′lis infe′rior,** duplicature of mucous membrane occasionally at the nasal portion of the lacrymal duct. **V. lacryma′lis supe′rior,** duplicature of mucous membrane situated in the lacrymal sac below the opening of the lacrymal canals. **V. mag′na cer′ebri,** v. Vieussenii. **V. pylo′rica,** see *Urinary bladder*. **V. semiluna′ris,** a small doubling of the tunica conjunctiva, which lies between the caruncula lacrymalis and the ball of the eye; in birds this is large and called the membrana nictitans. **V. semiluna′ris arteria′rum,** semilunar valves of the aorta and pulmonary artery. **V. semiluna′ris cerebel′li,** posterior medullary velum. **V. si′nus sinis′tri,** interauricular valve. **V. Tari′ni,** velum medullare posterius. **V. Thebe′sii,** see *Thebesius, veins of*. **V. Tul′pii,** valve of Bauhin. **V. vagi′næ,** hymen. **V. ve′næ mag′næ,** see *Thebesius, valve of*. **V. ves′ico-urethra′lis,** see *Urinary bladder*. **V. Vieussen′ii,** a thin, medullary lamina over the under end of the aquæductus Sylvii and upper part of the fourth ventricle; at the sides of the valves are two medullary tracts called processus ad testes, columnæ valvulæ Vieussenii, or oblique intercerebral commissure. **V. willisia′na,** valvula Vieussenii.

**Val′vulæ.** Plural of valvula. **V. arterio′sæ,** semilunar valves. **V. atrioventricula′res,** auriculoventricular valves. **V. bicuspida′les,** mitral valves. **V. conniven′tes** (self-closing valvules), Kerkringian valves or valves of Kerkring; numerous circular folds in the intestinal canal from the pyloric orifice through the greater part of the small intestine; they are folds of the mucous membrane, and their chief use appears to be to retard the passage of food and to afford a larger surface for the origin of chyliferous vessels. **V. cor′dis,** valves of the heart. **V. cor′dis mitra′les,** mitral valves. **V. cuspida′les,** auriculoventricular valves. **V. Kerkring′ii,** valvulæ conniventes. **V. proces′sûs vermifor′mis,** valves occasionally found at the orifice of the vermiform appendix. **V. semiluna′res,** sigmoid valves. **V. spira′les Heis′teri,** Heister's valves. **V. triglo′chines,** tricuspid valves. **V. trisul′cæ,** tricuspid valves. **V. vena′rum,** valves of veins. **V. veno′sæ,** auriculoventricular valves.

**Val′vular.** Relating to a valve.

**Valvuli′tis.** Inflammation of the valves of the heart, as in endocarditis.

**Valzin′.** See *Dulcin*.

**Van Best's opera′tion.** Operation for the radical cure of inguinal hernia by means of subcutaneous suturing of the external rings of the inguinal canal.

**Van Bu′ren's disease′.** Chronic infiltration of the corpus cavernosum of the penis.

**Vandel′lia diffu′sa** (after Vandelli, professor of botany at Coimbra). Native of Brazil, Guiana, and Isle of France; ord. *Scrophulariaceæ;* used as an antibilious emetic and antiperiodic. Regarded as an efficacious remedy in malignant fever and dysentery, especially in cases connected with a disordered liver.

**Van der Kolk's the′orem.** In lesions of a mixed nerve the sensory symptoms are more peripheral than the motor. This is based upon *Van der Kolk's law,* that the motor fibres of any nerve govern the muscles which move the parts to which the sensory fibres of the same nerve are distributed.

**Vanil′la.** (Ph. U. S.) The fruit of V. planifolia. Long, flattish pod, containing, under a wrinkled, brittle shell, a reddish-brown pulp with small, shining, black seeds. The parasitic plant which affords this pod is the *Epidendrum vanilla, Vanilla aromatica, planifolia,* or *mexicana,* and other species; family *Orchidaceæ.* It has an unctuous, aromatic taste and fragrant smell, like that of the finer balsams, heightened with musk. Although chiefly used as a perfume and for flavoring, it is reputed to possess aphrodisiac virtues; dose, ℥iv (16.0) in infusion. The official preparation is *tinctu′ra vanil′læ;* dose, ♏x–xxx (0.65–2.0). **V. aromat′ica,** see *Vanilla*.

**Vanil′lic acid.** Substance produced as a result of oxidation of vanillin.

**Vanillin′.** Odoriferous principle of vanilla occurring in stellate groups of colorless needles. It is also produced from coniferin and guaiacol. Stimulant in atonic indigestion. **V. paraphenetidin′,** soluble, crystalline salt; hypnotic, antineuralgic, styptic; dose, gr. xx–xxx (1.3–2.0).

**Vanil′lism.** Peculiar set of symptoms occurring among workmen in vanilla factories, due to inhalation of vanilla-dust.

**Van Swie′ten's solu′tion.** Solution of perchloride of mercury (1:1000).

**Van't Hoff's law.** Equal volumes of all solutions having the same temperature and the same osmotic pressure contain the same number of molecules.

**Va′por.** Flatulence. The Ph. Br. formerly had several preparations for inhalation under this head —*vapores.* **V. douche,** vapor directed upon the surface of the body or into one of the cavities as a therapeutic measure. **V. san′guinis,** odor of the blood. **V. ten′sion,** elastic or expansile force of vapor.

**Vapora′rium** (*vapor,* steam). Vapor bath; a remedy in rheumatic and cutaneous affections and wherever it is important to impress the cutaneous surface.

**Vapora′tio** (*vaporo,* to emit steam). Evaporation.

**Va′porish.** Hypochondriac; hysterical.

**Vaporiza′tion.** Conversion of solids or liquids into vapor.

**Va′porize.** To convert into vapor. To become vapor.

**Va′porous.** Windy.

**Va′pors.** Hypochondriasis; hysteria.

**Va′pory.** Hypochondriacal; hysterical.

**Varalette′.** An effervescent tablet.

**Vare′ni.** Mobile and periodical tumors affecting different parts. Wandering gout.

**Varia′tion.** Deviation in form, position, state, or qualities of the same individual; may be due to change of environment.

**Varicel′la** (dim. of variola). Chickenpox. A disease characterized by vesicles scattered over the body, which are glabrous, transparent, and about the size of peas. They appear in successive crops, are covered by a thin pellicle, and about the third, fourth, or fifth day from their appearance burst at the top and concrete into small, puckered scabs, which rarely leave a pit in the skin. Three varieties have sometimes been designated: 1. V. lentiformes or lenticular chickenpox, in which the vesicles are irregularly circular and flattened on the top, the fluid being at first whitish and afterward straw-colored; this is the common chickenpox. 2. V. coniformis, variously named pemphigus varioloides, variola lymphatica, crystalli, hydrachnis, varicella verrucosa, variolæ verrucosæ, conoidal chickenpox, glasspox, windpox, sheeppox, swinepox, waterpox, waterjags, in which the vesicles are generally acuminated and the fluid is pellucid throughout. 3. V. globularis or hives, in which the vesicles are globular and larger, the fluid being at first whey-colored and afterward yellowish. These divisions are, however, very arbitrary, for the various lesions are often confounded. *Hornpox* is a papular variety of varicella. **V. gangræno′sa,** dermatitis gangrænosa infantum; rupia escharotica. **V. pruri′go,** variety described by Hutchinson in which there are successive crops of vesicles which may go on to ulceration. **Pus′tular v.,** varioloid. **V. varioloide′a,** varioloid. **V. verruco′sa,** see *Varicella*.

**Varicel′lar fever.** Varicella. Varioloid.

**Varicel′loid.** Resembling varicella.

**Var′iciform.** Resembling a varix.

**Varicifor′mes paras′tatæ.** Ducts of the epididymis, so called because they seem knotty and varicose.

**Varicobleph′aron.** Varicose tumor of the eyelid.

**Var′icocele** (*varix+kele,* tumor). A varicose dilatation of the veins of the scrotum and spermatic cord. This latter variety of the disease is more common on the left side than on the right. It appears under the form of a soft, doughy, unequal, knotty, compressible, and indolent tumor, situated in the course of the cord and increasing from below upward. It is less when the individual is in the recumbent posture, and increases when he is erect. **Ova′rian v.**, varicose dilatation of the ovarian veins.

**Varicocelec′tomy.** Excision of a varicocele.

**Varicom′phalus.** Varicose tumor at the umbilicus.

**Var′icose** (*varix*). Relating to or affected with varix, as a varicose vein. **V. an′eurysm**, see *Aneurysm.*

**Varicos′itas.** Varicosity. **V. conjuncti′væ**, cirsophthalmia.

**Varicos′ity.** The condition of being varicose. See *Varix.*

**Varicot′omy.** Cutting operation upon a varix or varicose vein.

**Varic′ula.** Varix of the veins of the conjunctiva.

**Vari′ola** (*varius*, varied, spotted). Smallpox. Very contagious disease, characterized by fever, pain in the back, vomiting, and an eruption of papules, appearing from the third to the fifth day, and suppurating from the eighth to the tenth. The disease possesses all the distinctive properties of the major exanthemata. It is capable of being produced by inoculation, but this inoculated smallpox—*v. inserta*—communicates the disease as readily through the air as the natural smallpox, or that received without inoculation. Smallpox is divided into two classes, according to the character of the eruption—the discrete or distinct and the confluent: 1. In *v. discreta*, distinct smallpox, the pustules are usually the size of peas, distinct, distended, and circular, the intervening spaces being red; the fever inflammatory throughout, and ceasing when the eruption is complete. 2. In *v. confluens*, confluent smallpox, the pustules are confluent or run together; flaccid and irregularly circumscribed, the intervening spaces being pale, and the accompanying fever typhoid in character. In children diarrhœa, and in adults ptyalism, with swelling of the hands and feet, generally appear toward the stage of the secondary fever, which occurs from the tenth to the thirteenth day. The fever that precedes and accompanies the eruption is called the eruptive fever. The prognosis is ordinarily favorable in the discrete variety. The confluent is always dangerous, the unfavorable symptoms being flattening of the pustules or subsidence of the eruption, the breathing becoming much obstructed or oppressed, or marks of inflammatory and congestive affections occurring in the different viscera. When the pimples are confluent in patches, the patches being, however, separated by intervals of unaffected skin, it constitutes the clustered, coherent, or corymbose variety—*v. corymbosa.* When there are comparatively few pustules, and the general eruption scarcely passes beyond the vesicular stage, the term varicelloid smallpox, variola curta, varioloid, has been applied to it. Other forms of variola have been mentioned, such as the petechial and hemorrhagic, *v. cruenta*, or black pox, *v. gangrænosa*, etc. **V. amboinen′sis**, frambœsia. **Black v.**, hemorrhagic v. **V. bovi′na**, cowpox. **Cohe′rent v.**, v. in which there is coalescence but not confluence of the individual lesions. **V. con′fluens**, see *Variola.* **V. corymbo′sa**, see *Variola.* **V. cur′ta**, varioloid. **V. discre′ta**, see *Variola.* **V. equi′na**, horsepox. **Hemorrha′gic v.**, v. in which there is an effusion of blood into the pustules. **V. illegit′ima**, varicella. **V. inser′ta**, inoculated smallpox. **V. lymphat′ica**, varicella. **Malig′nant v.**, a fatal form, usually hemorrhagic. **V. mitiga′ta**, varioloid. **V. modifica′ta**, varioloid. **O′vine v.**, a disease of sheep resembling but not identified with smallpox in man. **V. no′tha**, varicella. **V. pucel′la**, varicella. **V. semicon′fluens**, the pustules touch each other without coalescing. **V. sine vari′olis**, variolous fever; occasionally observed during prevalence of variola, in which the constitutional phenomena of smallpox are present without cutaneous eruption. **V. spu′ria**, varicella. **V. sylves′tris**, varicella. **V. tuto′ria**, vaccina. **V. vacci′na**, vaccina. **V. vaccinato′rum**, varioloid. **V. varicellifor′mis**, varioloid. **V. ve′ra**, variola. **V. verruco′sa**, wartpox. **V. volat′ica**, varicella.

**Var′iolate.** Having resemblance to variola.

**Variola′tion.** Inoculation of smallpox.

**Variol′ic.** Variolous.

**Varioliza′tion.** Inoculation of smallpox.

**Var′ioloid** (*variola*+*eidos*, resemblance). Abortive smallpox. Smallpox modified by a previous attack or vaccination, and hence properly called modified smallpox. Occasionally, varioloid occurs without the eruption. This is the *varicellæ sine varicellis* of Mr. Erasmus Wilson, who calls varioloid *varicella.* Varioloid is true smallpox, though mild, and a person suffering from it may communicate any form, even the malignant, to those about him who are unprotected by vaccination or a previous attack.

**Vari′olous.** Relating or belonging to variola.

**Variolovacci′na.** A form of cowpox in the heifer produced by inoculation with the virus of smallpox.

**Variolovaccina′tion.** Inoculation with variolovaccine.

**Variolovaccine′.** Vaccine lymph from a heifer that has been inoculated with smallpox virus.

**Va′rix** (*varus*, turned, twisted). Varicose vein. Permanent dilatation of a vein, varicosity. Varices are owing to local retardation of the venous circulation, and, in some cases, to relaxation of the parietes of the veins. They are very common in the superficial veins of the lower limbs, especially of pregnant women. The tumor or tumors formed by varices are soft, knotty, unequal, indolent, and livid, without pulsation, yielding readily to the impression of the finger, but returning as soon as the compression is discontinued. **Aneurys′mal** or **Aneurys′moid v.**, see *Aneurysm, arteriovenous.* **Arte′rial v.**, elongation, dilatation, and tortuosity of an artery which thus resembles a varicose vein. **Lymphat′ic v.**, varicose lymphatic vessels, caused usually by the presence of filarial worms; nævoid elephantiasis.

**Var′nish li′ning.** Solution of gums in ether, alcohol, or chloroform, used to form a non-conducting film under a dental filling. **Sep′arating v.**, solution of vegetable gums in alcohol, used to prevent adhesion of plaster in making casts.

**Varo′lian.** Relating to the pons Varolii or to other parts named after Varolius. **V. bend**, middle of three primary flexures of the embryonic mammalian brain, situated anteriorly, between the hindbrain and after-brain. **V. bridge**, pons Varolii. **V. valve**, ileocæcal valve.

**Va′rus.** A spot or pimple on the face; acne, ianthus. Knock-kneed; the term *genu varum* is, however, incorrectly, though commonly, employed to designate bowlegs. **V. com′edo**, comedo. **V. mentag′ra**, sycosis. **Pes v.**, talipes v. **V. puncta′tus**, see *Acne.* **V. seba′ceus**, seborrhœa. **Tal′ipes v.**, clubfoot in which the foot is inverted, the weight being supported on the outer edge or even the dorsum.

**Vas.** Vessel. See also *Vasa.* **V. aber′rans Hal′leri**, vasculum aberrans. **V. af′ferens**, afferent vessel. **V. def′erens**, excretory duct of the testicle, emptying the secretion into the ejaculatory duct. **V. def′erens mulie′bris**, tuba fallopiana. **V. ef′ferens**, efferent vessel. **V. epididym′idis**, canal of epididymis. **V. Hal′leri**, vasculum aberrans. **V. spira′le**, a small vein imbedded in the membrana basilaris of the cochlea, connected with the vessels of the lamina spiralis ossea. **V. urina′rium**, ureter.

**Va′sa** (pl. of vas) **aberran′tia.** Peculiar ramifications of the biliary duct in the liver; long, slender vessels sometimes connecting the brachial or capillary arteries with one of the arteries of the forearm; see also *Vasculum aberrans.* **V. absorben′tia**, absorbent vessels. **V. afferen′tia**, see *Afferent* and *Efferent.* **V. bre′via**, see *Brevia vasa.* **V. capilla′ria**, capillary vessels. **V. capriola′ria**, spermatic vessels.

**V. centra′lia ner′vi op′tici**, central vessels of the optic nerve. **V. chylif′era** or **chylof′era**, chyliferous vessels. **V. chylopoiët′ica urinif′era**, blood-vessels which convey fluids from the chyliferous vessels to the renal veins. **V. cilia′ria**, ciliary arteries and veins. **V. deferen′tia**, see *Vas deferens.* **V. efferen′tia**, see *Afferent* and *Efferent.* **V. excreto′ria tes′tis**, see *Efferent.* **V. exhalan′tia**, exhalant vessels. **V. graafia′næ**, see *Efferent.* **V. hep′atis aberran′tia**, aberrant ducts of the liver. **V. h. interlobula′ria**, interlobular veins of the liver. **V. hydrago′ga**, lymphatic vessels. **V. inferen′tia**, see *Afferent* and *Efferent.* **V. intesti′ni ten′uis**, branches of the superior mesenteric artery distributed to the jejunum and ileum. **V. lac′tea**, chyliferous vessels; lactiferous vessels. **V. lymphat′ica**, lymphatic vessels. **V. menin′gea**, meningeal vessels. **V. nutrien′tia**, vasa vasorum. **V. nutrit′ia**, vasa vasorum. **V. rec′ta**, see *Rete testis.* **V. resorben′tia**, absorbent vessels; lymphatic vessels. **V. seda′lia**, hemorrhoidal vessels. **V. sero′sa**, see *Capillary vessels.* **V. serpenti′na tes′tis**, seminiferous tubules. **V. vaso′rum**, vessels of vessels; small vessels which supply the parietes of larger ones with blood for their nutrition; the cardiac or coronary arteries and veins may be regarded as the vasa vasorum of the heart. **V. vortico′sa** (*vortex,* a whirlpool), the contorted vessels which creep on the choroid coat of the eye; ciliary veins.

**Va′sal.** Relating to a vessel. Vascular.

**Vasa′lium.** Vascular tissue; the endothelial layer of serous membranes.

**Vasco′a amplexicau′lis** (after Vasco de Gama). South African shrub, ord. *Leguminosæ,* the roots of which taste like licorice. They are used, in decoction, in catarrh and phthisis, and are a good substitute for licorice. **V. perfolia′ta**, native of South Africa, used as a diuretic.

**Vas′cular.** That which belongs or relates to vessels, arterial, venous, or lymphatic, but generally restricted to blood-vessels only; more specifically in the latter case *blood vascular.* Full of vessels. **V. a′rea**, the outer part of the germinal area where the blood-vessels first appear. **V. glands**, see *Ganglion.* **V. lay′er**, see *Germinal layer.* **V. papil′læ**, papillæ of skin devoid of tactile corpuscles. **V. rad′icles**, radical vessels. **V. sub′stance of the kid′ney**, see *Kidney.* **V. sys′tem**, this includes the blood-vessels as follows: 1. Arterial system, or system of red blood, commencing with the radicles of the pulmonary veins and including the pulmonary veins, the left cavities of the heart, and the aorta with all its ramifications. The blood in this system is distributed to the (2) general capillary system, the intermediate vascular system, where it loses its arterial quality and becomes venous. 3. Venous system or vascular system of black blood, carrying the blood from every part of the system to the lungs; it takes its origin in the general capillary system, continues in the veins, right auricle and ventricle of the heart, and the pulmonary artery and its branches, and is finally lost in the capillary system of the lungs. (See cut under *Circulation.*) **Interme′diate** or **periph′eral v. sys′tem**, capillary system. **V. tu′mor**, angioma.

**Vascular′ity.** The state of being vascular or largely supplied with vessels.

**Vasculariza′tion.** Formation and extension of blood-vessels in a part; also applied to condition of bone associated with fungating osteitis, in which the tissue becomes canaliculated, and is said by some observers to be occupied by capillary vessels.

**Vas′cularize.** To furnish vessels to a part.

**Vasculi′tis.** Inflammation of a vessel.

**Vasculomo′tor.** Vasomotor.

**Vasculo′sa** (*vasculum,* vessel). Choroid coat of eye.

**Vas′culum** (dim. of *vas,* a vessel). Vessel. **V. aber′rans**, aberrant duct, appendix to the epididymis, a small, convoluted duct, of variable length, generally connected with the duct of the epididymis, immediately before the commencement of the vas deferens. **V. sanguinif′erum**, blood-vessel. **V. serpenti′num**, seminiferous tubule.

**Vaselin′.** Petrolatum.

**Vasicine′.** Alkaloid from leaves of Adhatoda vasica; employed in bronchitis and as an insecticide.

**Vasifac′tive** (*facio,* to make). Producing vessels.

**Vas′iform.** Resembling a vessel.

**Vasoconstric′tor.** Causing narrowing of the vessels, applied to both nerves and agents of any sort; vasohypertonic.

**Vasocoro′na.** System of blood-vessels which penetrate the spinal cord and supply its substance.

**Vasodentine′** (*vasum,* vessel, *dens,* tooth). Modification of the dentine by the permanent distribution of red blood to it through the vascular canals.

**Vasodila′tor.** Causing dilatation of vessels. **V. cen′tre**, hypothetical centre supposed to have control over the dilating mechanism of the arteries. **V. nerves**, nerves which when stimulated cause relaxation and rest of the arteries.

**Vasofac′tive.** Producing or forming vessels.

**Vasofor′mative.** Forming or producing vessels. **V. cells**, highly refractive cells of variable shape, existing in the omentum of young rabbits, which are the seat of origin of non-nucleated red blood corpuscles.

**Vasogan′glion.** A mass or plexus of blood-vessels.

**Vas′ogen.** Substance resembling vaselin, but more durably miscible with water.

**Vasohyperton′ic nerves.** Nerves which by their constrictive action on the arterioles diminish the quantity of blood in them.

**Vasohypoton′ic.** Vasodilator; vaso-inhibitory.

**Va′so-inhib′itory nerves.** Vasodilator nerves.

**Va′sol.** A combination of liquid petrolatum with oleate of ammonium.

**Vasomo′tion.** Change in the calibre of a blood-vessel.

**Vasomo′tor** (*vas,* a vessel, *motor,* mover). Causing dilatation or contraction in the blood-vessels. **V. cen′tres**, hypothetical centres situated in the medulla oblongata and spinal cord, having control over the vasomotor mechanism. **V. nerves**, nerves connecting the vasomotor centres with the motor mechanism of the blood-vessels.

**Vasomoto′rial.** Vasomotor.

**Vasomo′tory.** Vasomotor.

**Vasosen′sory.** Relating to the sensory action of the vessels.

**Vasospas′tic.** Relating to spasmodic narrowing of the blood-vessels.

**Vasoton′ic.** Giving tone to or preserving the natural tone of the vessels. The nervous centre controlling this is called the *vasotonic centre.*

**Vasotroph′ic.** Relating to the nourishment of the blood-vessels, or to changes in their nutrition from change of calibre.

**Vas′tus.** Vast or great in extent. **V. exter′nus** and **V. inter′nus**, two considerable fleshy masses which form part of the triceps cruris; see *Triceps.* **V. intermedia′lis**, a muscle of the back of the thigh, forming part of the quadriceps extensor mass. **V. latera′lis**, v. externus. **V. media′lis**, v. internus.

**Va′sum.** Vessel.

**Va′ter's ampul′la** (after Vater, German anatomist). Ampulla formed by the orifice of the pancreatic duct in the duodenum. **V.'s cor′puscles**, Pacinian corpuscles. **V.'s fold**, fold of mucous membrane of the duodenum above the opening of the pancreatic duct. **V.'s papil′la**, papilla in duodenal mucosa just where the ducts of the pancreas and liver enter it.

**Vater-Paci′ni cor′puscles.** See *Pacinian corpuscles.*

**Vate′ria.** A genus of plants, ord. *Dipterocarpeæ.* **V. in′dica**, copal tree, source of Malabar copal.

**Vault** (*volvo,* to turn). Name given to parts which are rounded superiorly, forming a dome-like roof, as the vault of the cranium or upper part of the skull, the palatine vault or roof of the mouth, etc.

**Vault′ing of the chest.** Precordial elevation or arching of the parietes of the thorax in the newborn child, in hypertrophy of the heart, etc.

**Vecor′dia.** Want of reason; idiotism. Insanity.

**Vec′tis** (*veho*, to carry). Lever; instrument with curved blade, similar to one blade of short, straight obstetrical forceps, used as a lever to assist delivery of the head. **V. elevato′rius,** elevator. **V. triploi′des,** triploid elevator.

**Vec′tor canal′** (*veho*, to carry). Fallopian tube.

**Vegetable,** vej′et-a-bl (*vegeto*, to flourish). Relating to plants. A vegetable is an organized being devoid of conscious sensation and voluntary motion, which receives its nutriment, essentially, by the roots. The science relating to vegetables is *phytology*. **V. albu′min,** substance corresponding to egg or serum albumin, found in the juices and seeds of certain plants; noted especially in the juice of papaw. **V. al′bumose,** an albumose present in vegetable tissue. **V. al′kali,** an alkaloid. **V. an′timony,** Eupatorium perfoliatum. **V. base,** an alkaloid. **V. brim′stone,** lycopodium. **V. cal′omel,** podophyllin. **V. ca′sein,** substance corresponding to animal casein, existing in the seeds of leguminosæ, especially peas, beans, lentils, hops, and almonds. **V. fi′brin,** gluten-casein. **V. food,** this includes quite a variety of articles containing albumin and fat and an excess of non-nitrogenous over the nitrogenous constituents; they are chiefly carbohydrates, and are generally less digestible than animal elements. **V. gold,** pipitzahoic acid. **V. hæmatin′,** aspergillin. **V. mer′cury,** root of Anchieta salutaris and Franciscea uniflora; antisyphilitic. **V. myosin′,** vegetable substance resembling animal myosin in the seeds of certain plants. **V. paraglobin′,** substance having the same properties as animal paraglobin, discovered in papaw juice. **V. pole,** collection of dentoplasm or food yolk in one part of the ovum as opposed to protoplasm or the animal part at the animal pole. **V. pro′teids,** proteids present in various vegetable tissues; they include v. albumin, v. casein, and v. albumoses. **V. sponge,** fabric made of vegetable fibres of the fruit of Luffa ægyptiaca; used as a flesh brush in bathing. **V. sul′phur,** lycopodium. **V. tro′car,** a name given to Apocynum cannabinum, the diuretic action of which has been utilized in the treatment of ascites and other serous effusions. **V. wax,** calcareous product, resembling beeswax, in several plants.

**Vegetal,** vej′e-tal. Relating to the vital functions, assimilation, growth, reproduction, etc., which are common to all life, as distinguished from conscious sensation, will, etc., characteristic of animals alone. Also, in general, relating to plants.

**Vegetal′ity.** Aggregate of vital phenomena common to plants and animals.

**Vegeta′rian.** See *Vegetarianism.*

**Vegeta′rianism.** A term employed to designate the view that man, for his full mental and corporeal development, ought to subsist on the direct productions of the vegetable kingdom, and totally abstain from the flesh of animals. An advocate of this doctrine is called a *vegetarian.*

**Vegeta′tion.** A morbid production like an excrescence on an organ or part, as on the heart-valves. A fleshy granulation, *hypersarcosis*, at the surfaces of wounds or ulcers. **Dendrit′ic v.,** villous cancer.

**Veg′etative.** Having relation to growth or nutrition, as vegetative functions. **V. pole,** vegetable pole.

**Vegeto-an′imal.** Having the character of both vegetable and animal substances; the vegetable proteids, for example. Relating to vegetables and animals.

**Ve′hicle** (*veho*, to carry). Anything which serves to carry; thus, the air is the vehicle of sound, the arteries are the vehicles of the blood, etc. In pharmacy a vehicle is an excipient, or substance serving as the medium of administration for medicine.

**Veil.** See *Velum.* **Hot′tentot v.,** Hottentot apron; ventrale cutaneum.

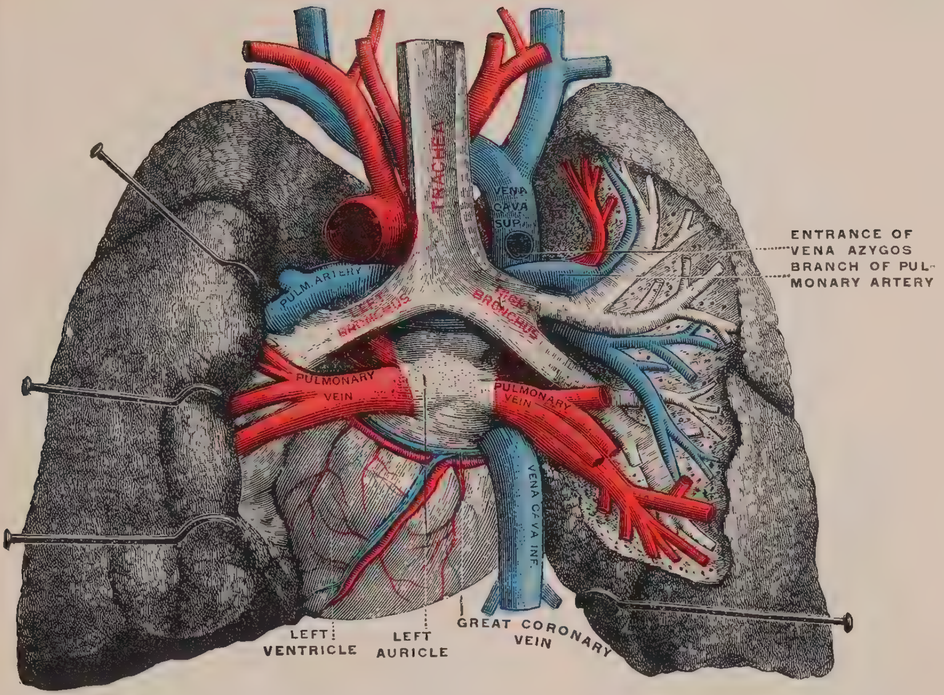
**Veiled puff.** See *Cavernous respiration.*

**Vein.** The veins are vessels for the conveyance of blood from every part of the body to the heart. They are found wherever there are arteries, and all together form the venous system, which may be subdivided into two distinct secondary systems: 1. The *general venous system*, which commences in all the organs by very minute radicles, and terminates in the heart by the cava and coronary vein. 2. The *abdominal venous system*, which is limited to the abdominal cavity, commences also by a great number of branches, and terminates in the liver by a single trunk, which subdivides in that organ. It is called also the system of the vena porta or the portal system. See *Porta.* The veins form two sets—one deep seated, venæ satellites or comites or concomites, which accompany the arteries; the other, superficial or subcutaneous. Their parietes, which are thinner than those of the arteries, are composed of three coats: the outermost, of areolar tissue interwoven with elastic fibres or a muscular stratum in the larger veins; the middle coat, elastic, with muscular fibres, the proper membrane; the other, the common or inner membrane, which is thin, polished, and has numerous duplicatures or folds forming parabolic valves, which are most numerous in the veins of the lower extremities. The coats of the veins are supplied with small arteries and veins, or vasa vasorum, and lymphatics. The nervous filaments—vasomotor—are from the great sympathetic nervous system.

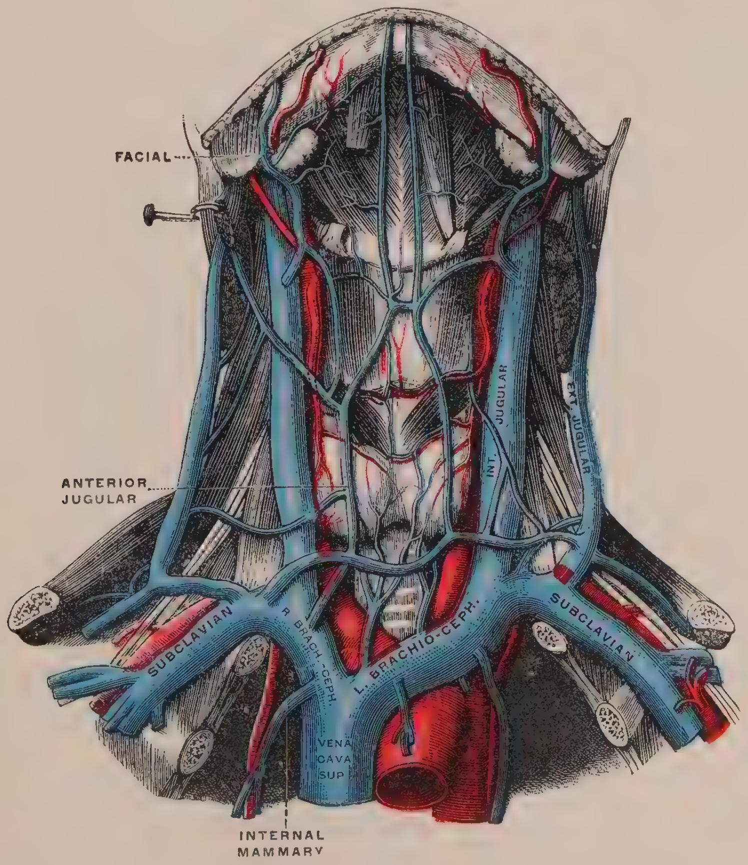
### TABLE OF VEINS.

1. VEINS WHICH FORM THE SUPERIOR VENA CAVA.

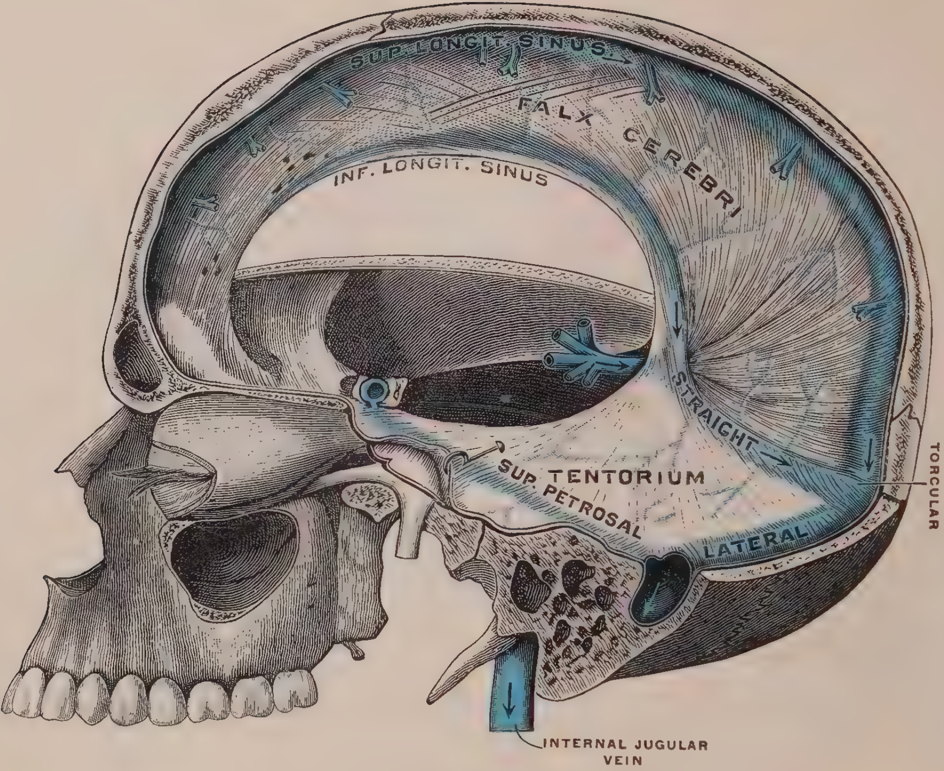
1. Subclavians, which receive the
    1. Axillary
        1. Basilic, formed of the
            1. Posterior ulnar.
            2. Anterior ulnar.
            3. Median basilic.
        2. Cephalic, forming the
            1. Superficial radial.
            2. Median cephalic.
        3. Circumflex veins.
        4. Inferior scapular.
        5. Long thoracic.
        6. Superior thoracic.
        7. Acromial veins.
    2. External Jugular.
        1. Internal maxillary, composed of the
            1. Pterygoid.
            2. Sphenopalatine.
            3. Alveolar.
            4. Infra-orbitar.
            5. Mental.
            6. Inferior dental.
            7. Deep temporal.
        2. Superficial temporal, composed of the
            1. Middle temporal.
            2. Anterior auriculars.
            3. Transverse of the face.
        3. Posterior auricular. The trunk then takes the name of external jugular, and in its course along the neck receives—
        4. Cervical cutaneous.
        5. Tracheloscapular, etc.
    3. Internal Jugular.
        1. Superior cerebral veins.
        2. Veins of the corpus striatum.
        3. Veins of the choroid plexus.
        4. Superior cerebellar veins.
        5. Inferior cerebellar veins.
        6. Lateral and inferior cerebral veins.
        7. Ophthalmic vein, composed of the
            1. Lacrymal.
            2. Central of the retina.
            3. Infra-orbitar.
            4. Ciliary.
            5. Ethmoidal.
            6. Palpebral, and
            7. Nasal veins.
        8. Facial vein, called angular, near the eye, receiving the
            1. Palpebral, and
            2. Superciliary veins.
            3. Dorsals of the nose.
            4. Superior
            5. Inferior
               Coronaries of the lip.
            6. Several buccal, and
            7. Masseteric veins.
            8. Ranine.
            9. Submental, and
            10. Inferior palatine.
        9. Lingual and pharyngeal veins.
        10. Superior thyroid.
        11. Occipital, and
        12. Veins of the diploë.
2. Right internal mammary vein.
3. Inferior thyroid vein, opening into the vena cava, between the two subclavians.
4. Vena azygos, which receives the
    1. Right bronchial.
    2. Intercostal veins.
    3. Semi-azygos.



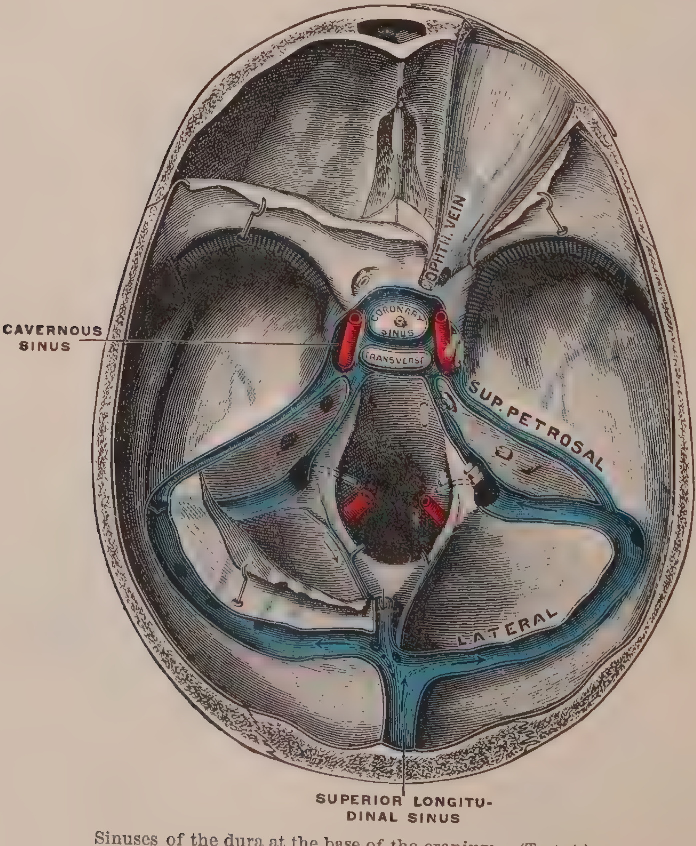
Pulmonary veins, seen in a dorsal view of heart and lungs. The left lung is pulled to the left, and the right lung has been partly cut away to show the ramifications of the air-tubes and blood-vessels. (Testut.)



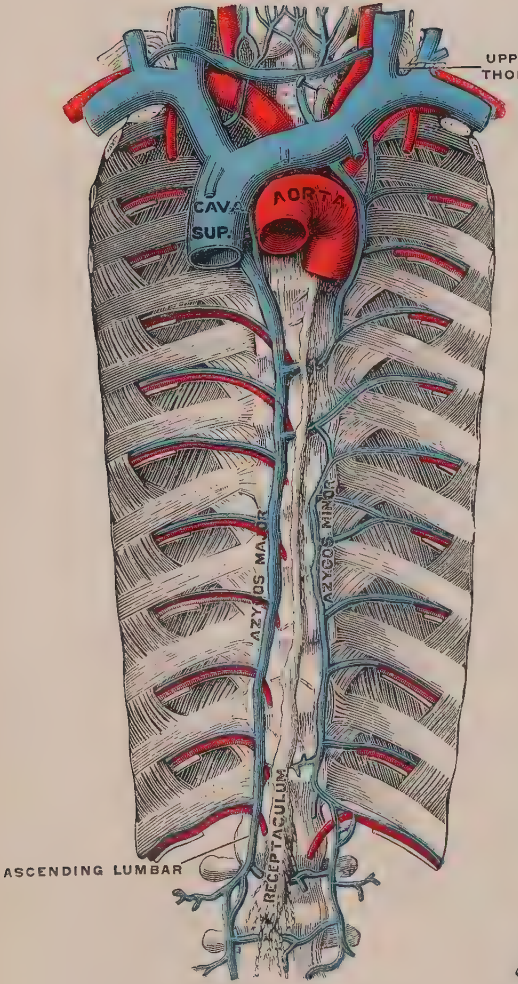
Veins of the neck and upper part of thorax: front view. (Testut.)



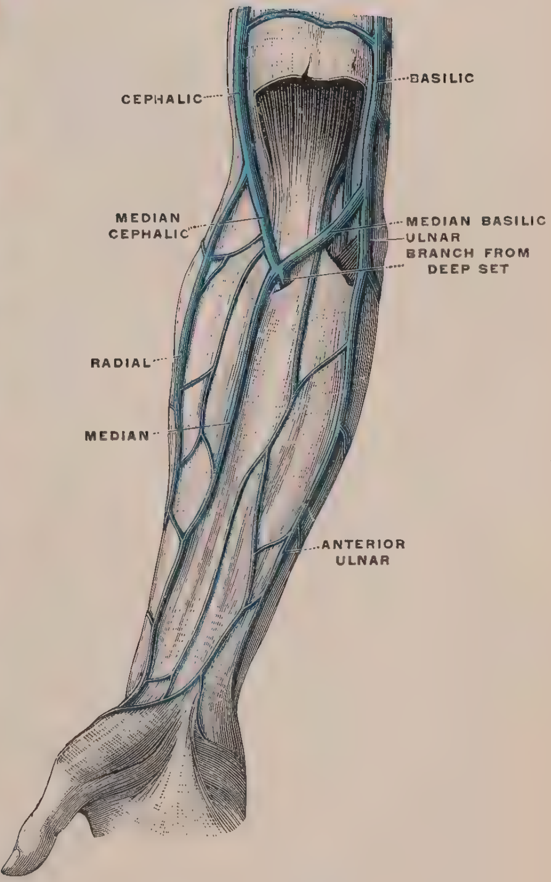
Sinuses of the dura: left lateral view. (Testut.)



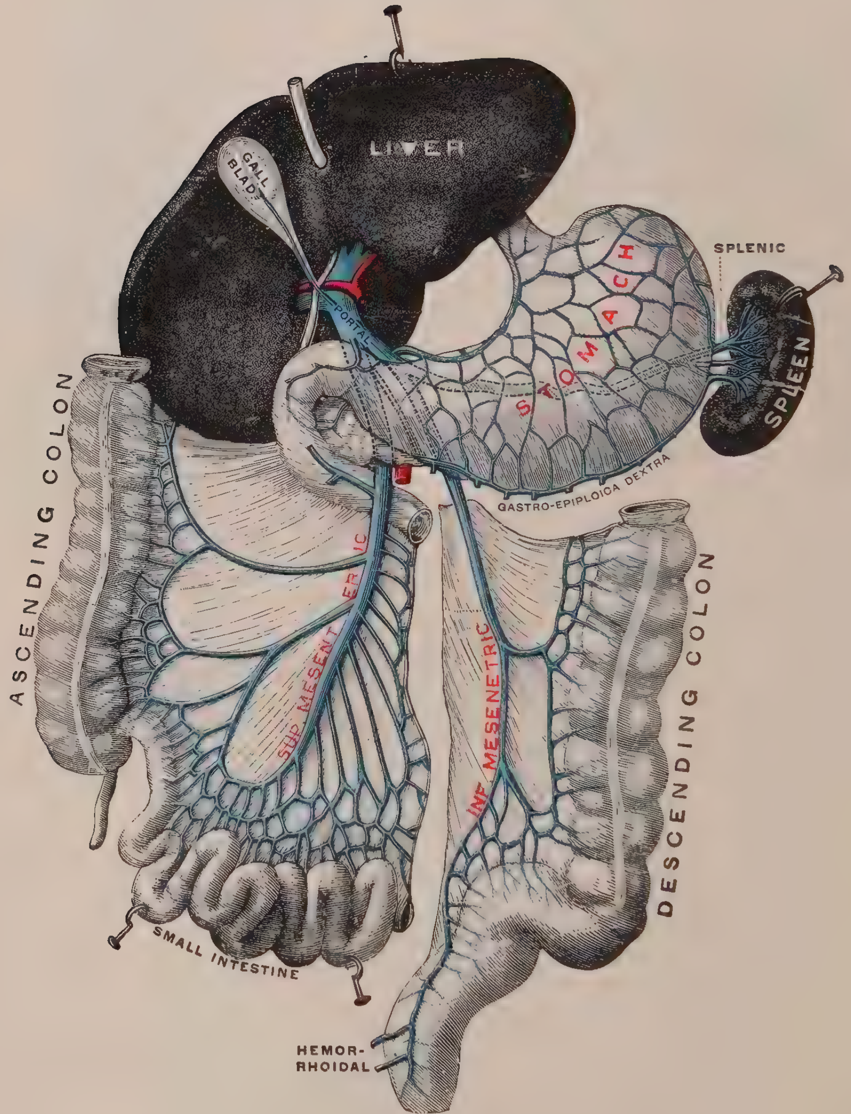
Sinuses of the dura at the base of the cranium. (Testut.)



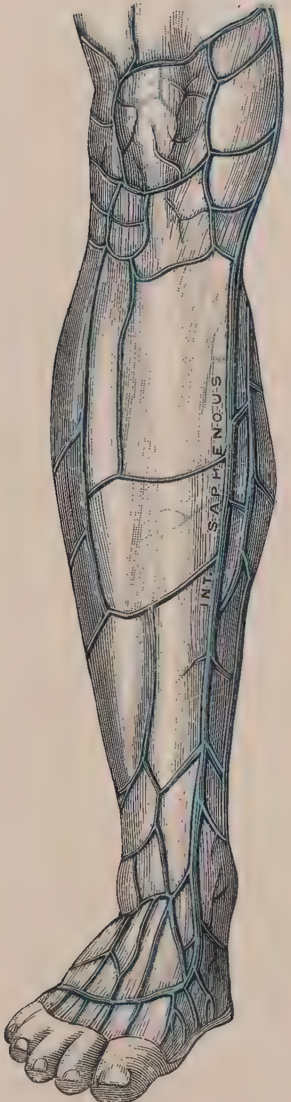
Azygos and intercostal veins. (Testut.)



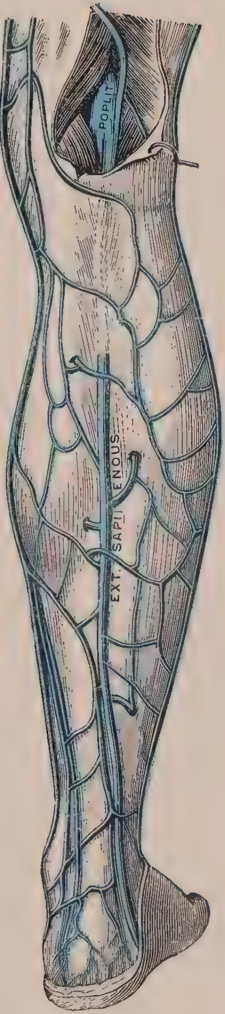
Superficial veins of the front of the forearm and lower part of the arm. (Testut.)



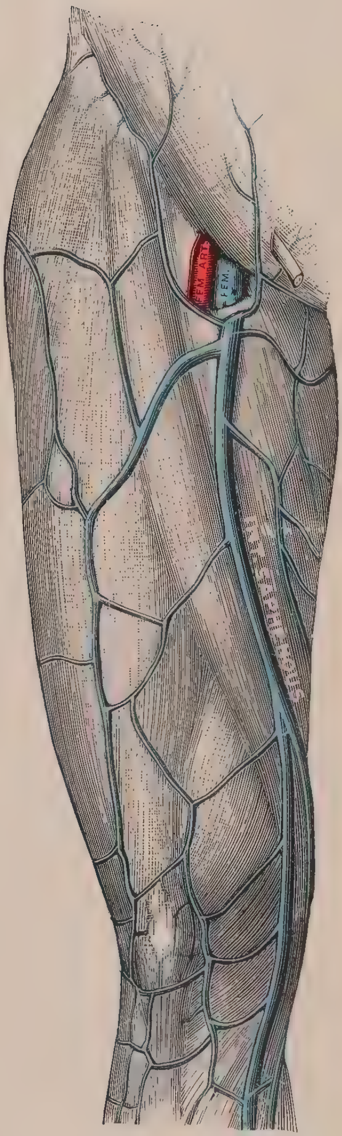
Portal system of veins. The liver is turned upward and backward, and the transverse colon and most of the small intestines are removed. (Testut.)



Superficial veins of the front of the leg and foot. (Testut.)



Superficial veins of the dorsum of the leg. (Testut.)



Superficial veins of the front of the right thigh. (Testut.)

### 2. VEINS WHICH FORM THE INFERIOR VENA CAVA.

1. Common Iliacs.
    1. External iliacs, formed by the—
        1. Femoral or crural, which is a continuation of the
        2. Popliteal, commencing by
        3. Veins which accompany the fibular arteries, and receiving the—
            1. Several abdominal veins.
            2. Circumflex iliac, and
            3. External pudic veins.
                1. External saphena and
                2. Internal saphena, which receive—
    2. Internal iliacs, which receive the—
        1. Vesical veins, commencing with the—
            1. Dorsal veins of the penis in the male.
            2. Veins of the clitoris in the female.
        2. Sacrolateral veins.
    3. Middle sacral vein.
    4. Lumbar veins—four in number on each side, commencing by —
        1. An abdominal branch.
        2. A dorsal branch.
    5. Spermatic veins, commencing with
        1. Spermatic plexus in the male.
        2. Veins of the ovarium, Fallopian tube, etc. in the female.
    6. Renal veins.
    7. Capsular and adipose veins.
    8. Hepatic veins.
    9. Middle,
    10. Left, and
    11. Right

        hepatic veins.
    12. Inferior diaphragmatic veins, two in number.

### 3. VEINS OF THE HEART.

1. Great right coronary.
2. Small right coronary.
3. Left coronary veins.

### 4. VEINS WHICH FORM THE VENA PORTA.

1. Splenic vein.
    1. Veins which correspond to the vasa brevia.
    2. Right and left gastro-epiploic.
    3. Duodenal, and
    4. Pancreatic veins.
    5. Coronary vein of the stomach, and
    6. Small mesenteric vein.
2. Superior mesenteric vein.

(For veins not mentioned in the following list, see *Vena* and *Venæ*.)

**Vein of a′læ na′si.** Tributary of the angular vein. **Anastomot′ic v.**, a vein connecting the superior longitudinal and superior petrosal or cavernous sinuses. **An′gular v.**, formed by the junction of the supraorbital and frontal veins. **Artic′ular v. of knee**, branch of the popliteal vein. **Aud′itory v.**, veins of the vestibule and semicircular canals. **Auric′ular v., ante′rior**, tributary of the temporal vein from the external ear; see *Auricular*. **A. v., poste′rior**, vein descending behind the external ear and joining the temporomaxillary vein; see *Auricular*. **Ax′illary v.**, large vein formed by the junction of the venæ comites of the brachial artery with the basilic vein; see *Axillary*. **Az′ygos v., left lower**, vein commencing by a branch of the ascending lumbar or left renal vein, terminating in the right azygos vein; see *Azygos*. **A. v., left upper**, vein receiving tributaries from the intercostal spaces; see *Azygous*. **A. v., right**, one of the veins arising from the right lumbar veins, right renal vein, or inferior vena cava, and terminating in the superior vena cava; see *Azygous*. **Bas′ilar v.**, vein passing over the crus cerebri to join the veins of Galen. **Basil′ic v.**, vein formed by coalescence of the common ulnar vein with the median basilic; see *Basilic vein*. **Basiver′tebral v.**, veins belonging to the bodies of the vertebræ. **V. of bone**, veins connected with the nutrition of the bones; in the flat bones, running in tortuous canals in the diploic tissue. **Bra′chial v.**, veins uniting with the basilic to form the axillary vein; see *Brachial veins*. **Brachiocephal′ic v.**, see *Innominate vein*. **V. of Breschet′**, see *Diploic*. **Bron′chial v.**, veins returning blood from the substance of the lungs; the right opens into the vena azygos major, the left into the upper azygos vein. **V.-brooch**, an instrument devised for the compression of veins. **Buc′cal v.**, branch of the internal maxillary vein. **Car′diac v.**, veins which return the blood from the substance of the heart; see *Cardiac*. **C. v., ante′rior**, three or four small veins collecting blood from the anterior surface of the right ventricle. **C. v., great**, large vessel commencing at the apex of the heart and opening into the coronary sinus. **C. v., poste′rior**, three or four small vessels collecting blood from the posterior surface of the left ventricle. **Car′dinal v.**, ascending veins from the parietes of the trunk of the fœtus and the Wolffian bodies. **Ca′va v.**, see *Vena cava*. **Cephal′ic v.**, vein passing along the outer border of the biceps muscle, terminating in the axillary vein; see *Cephalic veins*. **Cerebel′lar v.**, veins occupying the surface of the cerebellum; they are superior, inferior, and lateral. **Cer′ebral v.**, veins with thin coats occupying the surface and interior of the cerebrum. **Cer′vical v., ascend′ing** anterior vertebral vein, opening into the vertebral vein. **C. v., deep**, posterior vertebral vein, accompanying the profunda cervicis artery. **Cho′roid v. of brain**, vein running along the outer border of the choroid plexus, uniting to form the vein of the corpus striatum. **Cir′cumflex il′iac v.**, tributary of the external iliac vein. **C. v., superfic′ial**, tributary of the internal saphenous vein at the saphenous opening. **Con′dyloid v., poste′rior**, tributary to the vertebral vein through the posterior condyloid foramen. **Cor′onary v.**, see *Cardiac* and *Gastric veins*. **V. of cor′pora caverno′sa**, veins on the upper surface of the corpora cavernosa joining the dorsal vein. **V. of cor′pus spongio′sum**, veins from corpus spongiosum to the dorsal vein of the penis. **V. of cor′pus stria′tum**, a cerebral vein uniting with the choroid to form one of the venæ Galeni. **Cys′tic v.**, a tributary vein of the vena portæ. **Deep v.**, one of the venæ comites or companion veins to the arteries. **Demiaz′ygous v.**, see *Azygous*. **Den′tal v., infe′rior**, tributary of the internal maxillary vein. **Dig′ital v. of the hand**, two digital veins accompanying each corresponding artery. **V. of dip′loë**, large veins in the interior of the diploë of the cranial bones. **Diploet′ic v.**, see *Diploic*. **Dor′sal v. of the foot**, venæ comites of the dorsalis pedis artery. **D. v. of the nose**, small veins from the dorsum of the nose terminating in the nasal arch. **D. v. of the pe′nis**, large vein which returns the blood from the body of that organ, finally entering the prostatic plexus. **Dorsispi′nal v.**, veins placed on the exterior of the spinal column. **Em′issary v.**, small vein or veins passing through the cranium and forming a communication between the venous sinuses and external veins. **Epigas′tric v.**, a tributary vein of the external iliac. **E. v., superfic′ial**, a tributary of the femoral vein, entering it at the saphenous opening. **V. of eye′ball**, formed mainly by branches from the surface of the choroid and ending in the ophthalmic vein. **Fa′cial v.**, the direct continuation of the angular vein on the outer side of the facial artery; see *Facial vein*. **Fem′oral v.**, continuation of the popliteal vein, accompanying the femoral artery; the deep femoral vein accompanies the profunda femoris artery. **Fron′tal v.**, vein running downward near the middle line of the forehead, forming with its fellow of the opposite side, at the root of the nose, the nasal arch. **V. of Ga′len**, two veins formed by the union of two other veins, the vena corporis striata and the choroid vein, on either side. **Gas′tric v.**, two veins, one corresponding to the pyloric branch of the hepatic artery; the other, the coronary vein, to the gastric artery. **Gastro-epiplo′ic v.**, two veins, the right being a tributary of the posterior mesenteric vein, the left a tributary of the splenic vein. **Glu′teal v.**, one of the veins supplying blood from the exterior of the pelvis to the internal iliac vein. **Hemiaz′ygous v.**, small accessory v. of the azygous vein. **Hemorrhoi′dal v.**, three veins, the superior being a tributary of the inferior mesenteric, and uniting with the middle and inferior hemorrhoidal, which terminate in the internal iliac, to form the hemorrhoidal plexus. **Hepat′ic v.**, three large veins commencing in the substance of the liver and opening into the inferior vena cava; see *Hepatic veins*. **Il′iac**

**v., com′mon**, veins formed by the union of the external and internal iliac veins in front of the sacro-iliac articulation, uniting to form the inferior vena cava. **I. v., exter′nal,** commences at the termination of the femoral vein, beneath the crural arch, uniting with the internal iliac to form the common iliac. **I. v., inter′nal,** formed by the venæ comites of the branches of the internal iliac artery, the umbilical arteries excepted. **Iliolum′bar v.,** tributary to the common iliac vein. **Infe′rior ca′va v.,** see *Vena cava inferior.* **Innom′inate v.,** two large trunks on each side of the root of the neck, formed by the union of the internal jugular and subclavian veins of the corresponding side; see *Innominatæ.* **Intercos′tal v., supe′rior,** the right is a tributary of the right innominate vein; the left, of the left innominate vein; see *Intercostal.* **Interlob′ular v. of kid′ney,** veins passing inward between the pyramids of Ferrein, joining the venæ rectæ to form the proper renal veins. **I. v. of liver,** see *Liver.* **Interos′seous v. of fore′arm,** veins accompanying the anterior and posterior interosseous arteries. **Intralob′ular v. of liver,** see *Hepatic veins.* **Ju′gular v., ante′rior,** one, sometimes two, commencing near the hyoid bone and opening into the termination of the external jugular or into the subclavian vein. **J. v., exter′nal,** formed by the junction of the posterior division of the temporomaxillary and posterior auricular veins, receiving the greater part of the blood from the exterior of the cranium and deep parts of the face, and terminating in the subclavian vein. **J. v., e. poste′rior,** superficial vein of the neck, opening into the external jugular. **J. v., inter′nal,** formed by coalescence of the lateral and inferior petrosal sinuses, collecting the blood from the interior of the cranium and superficial parts of the face and neck, and uniting with the subclavian vein to form the vena innominata. **V. of kid′ney,** see *Kidney.* **La′bial v., infe′rior,** tributary of the facial vein; see *Labial veins.* **L. v., supe′rior,** tributary of the facial vein; see *Labial veins.* **Laryn′geal v.,** a branch of the inferior thyroid; see *Laryngeal veins.* **Lat′eral sac′ral v.,** tributary of the common iliac. **Lin′gual v.,** veins on the tongue accompanying the lingual artery. **V. of liver,** see *Liver.* **Longitu′dinal v., infe′rior,** the inferior longitudinal sinus, terminating in the straight sinus. **Lum′bar v.,** these are three or four in number on each side, collecting blood from the loins and abdominal walls, and terminating at the back part of the inferior vena cava. **L. v., ascend′ing,** a longitudinal vessel passing in front of the transverse processes of the lumbar vertebræ and communicating with each lumbar vein. **Mam′mary v., inter′nal,** see *Mammary veins.* **Masseter′ic v.,** see *Masseteric vein.* **Mas′toid v.,** a tributary of the occipital vein. **Max′illary v., inter′nal,** large vein receiving branches corresponding with those of the artery of the same name, uniting with the temporal vein to form the temporomaxillary. **Me′dian basil′ic v.,** see *Basilic.* **M. cephal′ic v.,** see *Cephalic.* **Medullispi′nal v.,** veins of the spinal cord. **Menin′geal v.,** tributaries of the internal maxillary vein. **Meningorrhachid′ian v.,** veins situated in the interior of the spinal canal between the vertebræ and the theca vertebralis. **Mesenter′ic v., infe′rior,** see *Mesenteric.* **M. v., supe′rior,** see *Mesenteric.* **Na′sal v.,** transverse trunk connecting the frontal veins of each side. **Oblique′ v.,** remnant of the obliterated left innominate vein of the fœtus. **Ob′turator v.,** see *Obturator.* **Occip′ital v.,** see *Occipital.* **Œsophag′eal v.,** a tributary of the inferior thyroid. **Omphalomesara′ic** or **Omphalomesenter′ic v.,** the main venous stem returning the blood from the yolk sac to the embryo. **Ophthal′mic v.,** see *Ophthalmic.* **Ova′rian v.,** analogues of the spermatic veins in the male, forming a plexus communicating with the uterine plexus; see *Spermatic veins.* **Pal′atine v., infe′rior,** a tributary of the facial vein. **Palatola′bial v.,** facial vein. **Pal′mar v., deep,** veins accompanying the deep palmar arch; see *Palmar arches.* **Pal′pebral v., infe′rior,** a tributary of the facial vein. **P. v., supe′rior,** a tributary of the angular vein. **Pancreat′ic v.,** branches from the pancreas to the splenic vein. **Pancreaticoduod′enal v.,** a tributary of the splenic vein. **Parot′id v.,** a tributary of the temporal vein in the parotid region. **Perone′al v.,** veins accompanying the peroneal artery. **Peroneomalle′olar v.,** saphena minor. **Pharyn′geal v.,** commencing in the pharyngeal plexus, terminates in the internal jugular. **Phren′ic v.,** these veins follow the course of the phrenic arteries. **Plan′tar v.,** the external and internal plantar veins unite to form the posterior tibial; they accompany the posterior tibial artery. **Poplite′al v.,** formed by the junction of the venæ comites of the anterior and posterior tibial vessels, and becoming the femoral vein. **Por′tal v.,** see *Porta vena.* **Profun′da fem′oris v.,** branch of the femoral vein near its termination. **Pter′ygoid plex′us v.,** a large plexus formed by branches of the internal maxillary vein. **Pu′dic v., exter′nal,** a tributary of the femoral vein, entering it at the saphenous opening. **P. v., inter′nal,** a tributary of the internal iliac vein. **Pul′monary v.,** see *Pulmonary.* **Ra′dial v.,** commencing by various tributaries and communicating veins, it passes along the radial side of the forearm as a large vessel, uniting at the elbow with the median cephalic to form the cephalic. **Ran′ine v.,** a tributary of the facial vein, and sometimes of the lingual. **Re′nal v.,** see *Kidney.* **Sa′cral v., lat′eral,** branches of the common iliac. **S. v., mid′dle,** veins accompanying the artery of the same name and terminating in the left common iliac vein. **Salvatel′la v.,** see *Salvatella.* **Saphe′nous v., exter′nal** or **short,** see *Saphena.* **S. v., inter′nal** or **long,** see *Saphena.* **Sciat′ic v.,** one of the important veins that supply blood from the exterior of the pelvis to the internal iliac vein. **Semiaz′ygous v.,** see *Azygous.* **Spermat′ic v.,** see *Spermatic veins.* **Sphenopal′atine v.,** a tributary of the pharyngeal vein. **Spi′nal v.,** a generic term for the numerous venous plexuses situated upon and within the spine, including those on the exterior, the *dorsispinal* veins; those in the interior of the spinal canal; *meningorrhachidian* veins; the veins of the body of the vertebræ, *venæ basis vertebrarum;* and the veins of the spinal cord, *medullispinal* veins. **Splen′ic v.,** see *Splenic.* **Stel′late v.,** Verheyen's stars, a stelliform plexus of veins at the surface of the kidney, giving origin to the interlobular veins. **Stylomas′toid v.,** a branch of the posterior auricular vein. **Subcla′vian v.,** see *Subclavian.* **Sublob′ular v.,** veins of the liver in which the intralobular veins terminate; by their union the sublobular veins form the hepatic veins. **Submax′illary v.,** a branch of the facial vein commencing in the submaxillary gland. **Submen′tal v.,** a branch of the facial vein below the jaw. **Superfic′ial v.,** subcutaneous veins between the layers of the superficial fascia. **Supe′rior intercos′tal v., left,** see *Azygous.* **Suprahepat′ic v.,** hepatic veins. **Supraor′bital v.,** commencing on the forehead, it joins the frontal to form the angular vein. **Suprare′nal v.,** a branch of the inferior vena cava on the right side, and on the left side terminating in the left renal or phrenic vein. **Suprascap′ular v.,** a tributary of the external jugular near its termination. **Su′ral v.,** veins from the gastrocnemius muscle to the popliteal vein. **System′ic v.,** veins which return the venous blood from almost all parts of the body to the right auricle of the heart. **Tem′poral v.,** vein commencing by a small plexus on the side and vertex of the skull; after being joined by the middle temporal it enters the parotid gland and unites with the internal maxillary to form the temporomaxillary. **Temporomax′illary v.,** formed as just stated, dividing into two branches. **Thy′roid v., infe′rior,** see *Thyroideal.* **T. v., mid′dle,** returns the blood from the lower portion of the lateral lobe of the thyroid gland and terminates in the internal jugular. **T. v., supe′rior,** see *Thyroideal.* **Tib′ial v., ante′rior,** formed by venæ comites of the dorsalis pedis artery, and uniting with the posterior tibial to form the popliteal vein. **T. v., poste′rior,** veins communicating with the internal saphenous vein in the leg. **Tibiomalle′olar v.,** great saphena. **Transverse′ cer′vical v.,** a tributary of the external jugular near its termination. **T. fa′cial v.,** a large vein, tributary to the temporal vein, from the side of the face. **Trolard's′ v.,** anastomotic vein. **Ul′nar v., ante′rior,** ascends along the inner side of the forearm, uniting at the bend of the elbow with the posterior ulnar to form the common ulnar vein. **U. v., deep,** vein from the ulnar side of the hand, uniting at the elbow with the deep radial veins to form the venæ comites of the brachial artery. **U. v., poste′rior,** vein chiefly from the ulnar side of the hand, passing along the posterior surface of the ulnar side of the forearm, uniting below the elbow with the anterior ulnar to form the common ulnar or with the median basilic to form the basilic. **Umbil′ical v.,** see *Umbilical vessels* and *Fetal circulation.* **Vag′inal v. of liv′er,** veins corresponding with the vaginal branches of the hepatic artery. **Var′icose v.,** varix. **Va′sa bre′via v.,** see *Brevia.* **Ver′tebral v.,** vein accompanying vertebral artery, terminating at the root of the neck in the innominate vein. **Vid′ian v.,** a tributary to the pharyngeal vein. **Vitel′line v.,** vessels in the embryo carrying the blood from the area vasculosa to the heart.

**Vein′stone.** Phlebolith.

**Vela′men.** A veil. **V. nati′vum** (native covering), integument. **V. vul′væ,** see *Ventrale cutaneum.*

**Velamen′ta** (pl. of *velamentum,* covering) **bomby′cina.** Villous membranes. **V. cerebra′lia,** meninges. **V. infan′tis,** membranes of the fœtus.

**Velamen′tous.** Resembling a veil.

**Velamen′tum** (covering) **abdomina′le.** Peritoneum. **V. cor′poris commu′ne,** integument. **V. lin′guæ,** glossoepiglottic ligament. **V. nati′vum,** integument.

**Ve′lar.** Relating to a velum.

**Veldt sore.** Natal boil.

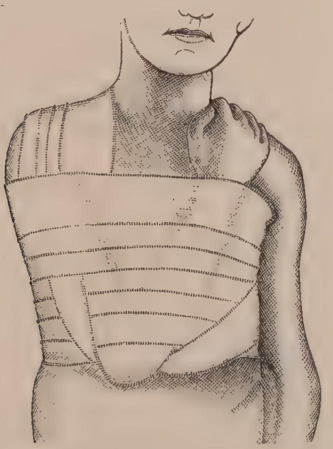
**Vellari′na.** Pale yellow oil from Hydrocotyle asiatica; it has been advised in the treatment of leprous affections.

**Vellica′tion.** Twitching of muscles.

**Vellosin′.** $C_{23}H_{28}N_2O_4$. Principle from the bark of Geissospermum vellosii.

**Velosyn′thesis** (*velum,* veil, *synthesis,* putting together). Staphylorrhaphy.

**Velpeau's′ ban′dage.** A bandage for retaining the arm in cases of fracture of the clavicle. A pad in the axilla on the affected side serves as a fulcrum to make extension of the broken clavicle. **V.'s her′nia,** crural hernia anterior to the blood-vessels.



Velpeau's bandage for fracture of the clavicle.

**Ve′lum.** Veil or cover. **Ante′rior v.,** valvula Vieussenii. **V. apoph′ysi vermifor′mi obten′tum,** valvula Vieussenii. **Artifi′cial v.,** appliance used in dentistry as a mechanical substitute for the soft palate. **Infe′rior v.,** v. medullare posterius. **V. interjec′tum cerebel′li,** valvula Vieussenii. **V. interpos′itum,** a vascular membrane reflected from the pia mater into the interior of the brain through the transverse fissure; it separates the under surface of the body of the fornix from the cavity of the third ventricle. **V. medulla′re anti′cum,** valvula Vieussenii. **V. medulla′re infe′rius,** the medullary band or strip by which the cerebellum communicates with the medulla. **V. medulla′re poste′rius** or **posti′cum** or **semiluna′re,** the small, posterior valve of the cerebellum, a thin, medullary plate between the medulla oblongata and vermis inferior, in front of the nodulus. **V. pala′ti** or **palati′num,** velum pendulum palati. **V. pen′dulum pala′ti,** pendulous veil of the palate, soft palate, a movable, soft, and broad septum attached to the posterior extremity of the palatine arch, and separating the mouth from the pharynx. Its form is nearly quadrilateral. Its anterior surface corresponds to the mouth, and the posterior to the pharynx. Its upper edge is fixed to the palatine arch; the inferior is free, floating, and has an appendix at its middle—the uvula. The lateral margins of the velum are held down by two folds, the pillars, separated from each other by a triangular space; the anterior passes to the base of the tongue, the posterior to the sides of the pharynx. The velum palati is formed of a mucous coat which contains numerous follicles, and of a muscular stratum. **V. plex′ibus choroide′is interpos′itum,** velum interpositum. **V. pupil′læ,** pupillary membrane. **V. staphyli′num,** velum pendulum palati. **Supe′rior v.,** valvula Vieussenii. **V. Tari′ni,** velum medullare posterius. **V. triangula′re,** tela choroidea superior. **V. vesi′cæ urina′riæ,** trigonum of the bladder. **V. Vieusse′nii,** valvula Vieussenii.

**Vel′vet leaf.** Abutilon avicennæ; pareira.

**Ve′na.** Vein. See also *Venæ.* **V. accesso′ria,** left upper azygos vein. **V. al′ba re′num,** ureter. **V. al′ba thora′cis,** thoracic duct. **V. anastomot′ica mag′na,** anastomotic vein of Trolard. **V. angula′ris,** angular vein. **V. an′guli o′ris,** branch to the facial vein from the angle of the mouth. **V. anon′yma brachiocephal′ica,** innominate vein. **V. anon′yma ili′aca,** common iliac vein. **V. ante′rior cer′ebri,** anastomotic vein of Trolard. **V. apoplec′tica,** internal jugular vein. **V. aquæduc′tûs coch′leæ** or **a. vestib′uli,** auditory veins. **V. arterio′sa,** pulmonary artery; vena porta. **V. ascen′dens,** basilar vein. **V. axilla′ris,** axillary vein. **V. az′ygos,** right azygos vein. **V. a. accesso′ria,** left upper azygos vein. **V. a. cerebel′li poste′rior,** vein on the inferior vermiform process. **V. a. cona′rii,** small vein passing from the region of the pineal gland to empty into the internal cerebral vein. **V. a. lumba′ris,** ascending lumbar vein. **V. a. mag′na** or **ma′jor,** right azygos vein. **V. a. mi′nor** or **par′va** or **sinis′tra,** left lower azygos vein. **V. basila′ris,** basilar vein. **V. basil′ica,** basilic vein. **V. b. antibra′chii,** superficial ulnar vein. **V. capita′lis bra′chii,** main venous trunk of the arm in the fœtus. **V. cap′itis,** cephalic vein. **V. caro′tis exter′na,** temporomaxillary vein. **V. car′pea commu′nicans dorsa′lis,** anastomotic branch between the deep veins of the back of the hand and the vein of the fourth metacarpal space. **V. ca′va,** name given to two great veins which meet at the right auricle of the heart; the vena cava *superior, thoracica,* or *descendens* is formed by the union of the subclavian veins, and receives successively, before its termination at the upper part of the right auricle, the inferior thyroid, right internal mammary, superior diaphragmatic, azygos, etc.; the vena cava *inferior, abdominalis,* or *ascendens* arises from the union of the two primary iliacs, opposite the fourth or fifth lumbar vertebra, receives the middle sacral, lumbar, right spermatic, hepatic, and inferior diaphragmatic veins, and opens at the posterior and inferior part of the right auricle. **V. c. supe′rior sinis′tra,** vessel in the fœtus corresponding to the right descending vena cava. **V. centra′lis**, trunk into which the minute veins of the suprarenal capsule empty. **V. centra′lis ret′inæ**, vein receiving blood from the retina, passing from the eyeball through the centre of the optic disk, and emptying into the cavernous or ophthalmic vein. **V. cephal′ica**, cephalic vein. **V. c. ante′rior**, common facial vein. **V. c. antibra′chii**, superficial radial vein. **V. c. ascen′dens**, the cephalic vein in the fœtus. **V. c. commu′nis**, common jugular vein. **V. c. descen′dens**, a branch in the fœtus passing over the clavicle to unite with the cephalic vein. **V. c. exter′na**, common facial vein. **V. c. hu′meri**, cephalic vein. **V. c. inter′na**, internal jugular vein. **V. c. pol′licis**, vein from the thumb and index finger and back of the hand, emptying into the radial vein. **V. c. poste′rior**, internal jugular vein. **V. cerebra′lis infe′rior ante′rior**, basilar vein. **V. cer′ebri ascen′dens**, basilar vein. **V. c. inter′na commu′nis, V. c. inter′na ma′jor**, or **V. c. mag′na**, vena magna Galeni. **V. c. me′dia**, vena fossæ Sylvii. **V. c. poste′rior infe′rior**, branch to the veins of Galen from the posterior part of the hemispheres. **V. cervica′lis profun′da**, deep cervical vein. **V. c. superficia′lis**, posterior external jugular vein. **V. choroide′a**, choroid vein. **V. col′ica sinis′tra**, inferior mesenteric vein. **V. com′itans hypoglos′si**, sublingual vein. **V. commu′nicans cephal′ica pol′licis**, an anastomotic branch between the vena cephalica pollicis and the deep palmar venous arch. **V. c. mag′na**, anastomotic vein of Trolard. **V. c. obturato′ria**, branch from the dorsal vein of the penis to the obturator vein. **V. c. ulna′ris**, anastomotic branch between the superficial ulnar vein and the deep palmar venous arch. **V. cona′rii**, branch from the pineal gland to the veins of Galen. **V. cor′dis Gale′ni**, middle cardiac vein. **V. cor′nu**, vein from the pudendal plexus, emptying into the internal iliac. **V. corona′ria cor′dis mi′nor** or **poste′rior**, middle cardiac vein. **V. c. u′teri**, trunk formed upon the pregnant uterus by enlarged branches of the uterine and vaginal plexuses. **V. c. ventric′uli infe′rior**, vena gastroepiploica dextra. **V. cor′poris stria′ti**, one of two veins forming the venæ Galeni or deep cerebral veins. **V. costa′lis supre′ma**, superior intercostal vein. **V. cubita′lis cuta′nea**, basilic vein. **V. cu′biti inte′rior**, basilic vein. **V. cuta′nea cervi′cis mag′na**, posterior external jugular vein. **V. c. col′li ante′rior**, anterior jugular vein. **V. c. col′li infe′rior**, arcus venosus juguli. **V. c. col′li ma′jor** or **poste′rior**, external jugular vein. **V. c. exter′na**, cephalic vein; radial vein. **V. c. fron′tis mag′na**, frontal veins. **V. c. inter′na**, superficial ulnar vein. **V. c. inter′na bra′chii**, basilic vein. **V. c. media′na**, median vein. **V. c. radia′lis**, radial vein. **V. c. radia′lis bra′chii**, cephalic vein. **V. c. ulna′ris**, ulnar vein. **V. c. ulna′ris bra′chii**, basilic vein. **V. demiaz′ygos**, see *Azygos*. **V. diploët′ica**, see *Diploic*. **V. epigas′trica infe′rior tegumento′sa**, subcutaneous vein from the umbilical and hypogastric regions, emptying into the femoral vein. **V. facia′lis ante′rior**, facial vein. **V. f. commu′nis**, common facial vein. **V. f. cuta′nea commu′nis**, facial vein. **V. f. exter′na**, temporomaxillary vein. **V. f. inter′na**, facial vein. **V. f. poste′rior**, temporomaxillary vein. **V. falcifor′mis**, inferior longitudinal sinus. **V. fal′cis cer′ebri**, sinus longitudinalis inferior. **V. fos′sæ Syl′vii**, vein from anterior perforated space, emptying into the anterior end of the cavernous sinus. **V. Gale′ni**, see *Cardiac veins* and *Choroid veins*. **V. gastroliena′lis**, splenic vein. **V. hemiaz′ygos**, left lower azygos vein; see *Azygos*. **V. h. accesso′ria**, left upper azygos vein. **V. hepat′ica**, right basilic vein. **V. hypogas′trica**, internal iliac vein. **V. ili′aca primiti′va**, common iliac vein. **V. iliolumba′lis**, vein with distribution similar to that of the iliolumbar artery, emptying into the internal iliac vein. **V. intercosta′lis supre′ma**, superior intercostal vein. **V. inter′na**, vertebral vein. **V. interventricula′ris posti′ca**, middle cardiac vein. **V. jugula′ris ante′rior exter′na**, anterior jugular vein. **V. j. ante′rior horizonta′lis**, arcus venosus juguli. **V. j. cephal′ica**, internal jugular vein. **V. j. cerebra′lis**, internal jugular vein. **V. j. exter′na ante′rior**, arcus venosus juguli. **V. j. exter′na poste′rior**, external jugular vein. **V. j. transversa′lis ante′rior**, arcus venosus juguli. **V. labia′lis me′dia**, vena anguli oris. **V. lac′tea**, porta vena. **V. latera′lis**, vertebral vein. **V. liena′lis**, splenic vein. **V. lumba′ris ascen′dens** or **lumbocosta′lis**, ascending lumbar vein. **V. macula′ris**, vein of the retina from the macula lutea, emptying into the vena centralis retinæ. **V. mag′na**, portal vein. **V. mag′na cor′dis**, coronary vein of the heart. **V. m. Gale′ni**, see *Galen, veins of*. **V. maxilla′ris inter′na ante′rior**, deep facial vein. **V. m. inter′na poste′rior**, internal maxillary vein. **V. media′na**, vein or veins from the medial side of the retina, emptying into the vena centralis retinæ. **V. m. antibra′chia**, median vein. **V. m. basil′ica**, median basilic vein. **V. m. cephal′ica**, median cephalic vein. **V. m. col′li**, anterior jugular vein. **V. m. commu′nis**, median vein. **V. m. xiphoide′a tegumento′sa**, subcutaneous vein from the umbilical region to the vena transversa xiphoidea. **V. medi′na Ar′abum** or **medinen′sis**, dracunculus. **V. mesenter′ica mag′na**, superior mesenteric vein. **V. m. mi′nor** or **par′va**, inferior mesenteric vein. **V. metacar′pea ulna′ris**, vein from venæ intercapitulares along the radial border of the hand. **V. nasa′lis**, branch from the nasal side of the retina, emptying into the vena papillaris inferior. **V. n. supe′rior**, branch from the nasal side of the retina, emptying into the vena papillaris superior. **V. ner′vi hypoglos′si**, sublingual vein. **V. obli′qua auricula′ris**, oblique vein of the heart. **V. ophthal′mica cerebra′lis**, superior ophthalmic vein. **V. o. exter′na** or **facia′lis**, inferior ophthalmic vein. **V. o. inter′na**, internal ophthalmic vein. **V. ophthalmomeninge′a**, vein from the vicinity of the fissure of Sylvius to the sphenoparietal sinus or ophthalmic vein. **V. ostia′ria**, vena porta. **V. papilla′ris**, branch or branches to the vena centralis retinæ from the optic disk. **V. pa′ri ca′rens**, azygos vein. **V. parumbilica′lis xiphoide′a**, anastomotic branch from the greater parumbilical vein to the left superior epigastric vein. **V. petro′sa infe′rior**, inner portion of the inferior petrosal sinus. **V. por′ta, por′tæ, porta′lis, porta′rum**, or **ad por′tas**, portal vein. **V. poste′rior at′rii sinis′tri**, oblique vein of the heart. **V. præpara′ta**, frontal vein. **V. profun′da**, vertebral vein. **V. pudendoglutæ′a**, vein from the pudendal plexus, receiving the sciatic and gluteal veins and emptying into the internal iliac. **V. pulmona′lis dex′tra me′dia**, supplementary pulmonary artery sometimes observed. **V. rama′lis**, vena porta. **V. rani′na**, sublingual vein. **V. reflex′a**, vein of the corpus striatum. **V. Rosenthal′ii**, basilar vein. **V. salvatel′la**, annular vein; vein of the little finger over the fourth metacarpal space. **V. saphe′na mag′na**, long saphenous vein. **V. sem′ino-urethrosacra′lis**, from the pudendal plexus, emptying into the internal iliac. **V. si′ne com′ite** or **si′ne pa′re**, azygos vein. **V. splen′ica**, left basilic vein; splenic vein. **V. stelechiæ′a**, vena porta. **V. subala′ris**, vena axillaris. **V. subcuta′nea col′li ante′rior**, anterior jugular vein. **V. s. c. poste′rior**, posterior external jugular vein. **V. sul′ci centra′lis**, posterior superior cerebral vein in the central sulcus. **V. superficia′lis col′li ante′rior**, anterior jugular vein. **V. tempora′lis commu′nis**, temporomaxillary vein. **V. t. infe′rior**, branch to the vena papillaris inferior from the temporal side of the retina. **V. termina′lis**, vein of the corpus striatum; circulus venosus. **V. thorac′icoepigas′trica lon′ga tegumento′sa**, anastomotic vein from the vena circumflexa ilii tegumentosa and long thoracic vein. **V. thyroide′a i′ma**, inferior thyroid vein. **V. thyrolarynge′a**, superior thyroid vein. **V. transver′sa xiphoide′a**, subcutaneous vein connecting the opposite internal mammary veins. **V. vela′ta**, vein of the corpus striatum. **V. verteb′ra′lis exter′na**, deep cervical vein. **V. v. e. ante′rior**, anterior vertebral vein. **V. v. poste′rior**, deep cervical vein. **V. v. superficia′lis**, deep cervical vein. **V. zygomat′ico-orbita′lis**, orbital vein.

**Ven′æ** (pl. of vena). Veins. **V. advehen′tes**, small veins in the fœtus carrying blood into the liver from the ductus venosus. **V. a. capsula′res**, branches to the portal vein from the capsule of the liver. **V. ala′res na′rium**, lateral nasal veins. **V. anastomot′icæ mag′næ ca′vi cra′nii** or **cer′ebri**, veins of the pia mater, forming communication between the superior longitudinal sinus and sinuses at the base of the brain, the anterior passing to the superior petrosal sinus; posterior, to the lateral sinus. **V. anon′ymæ**, innominate veins. **V. apoplec′ticæ**, jugular veins. **V. atrabilia′riæ**, suprarenal veins. **V. auditi′væ inter′næ**, auditory veins. **V. auricula′res**, auricular veins. **V. ba′sis vertebra′rum** or **basivertebra′les**, veins in the canals of the bodies of the vertebræ emptying into the meningorachidian veins. **V. bul′bo-urethra′les**, veins from the bulb of the urethra emptying into the pudendal plexus. **V. calca′næ**, branches from the region of the heel emptying into the posterior tibial veins. **V. capsula′res**, suprarenal veins. **V. cauda′les**, medial sacral veins. **V. ca′væ hep′atis**, hepatic veins. **V. caverno′sæ**, veins from the corpora cavernosa and spongiosa of the penis, emptying into the pudendal plexus. **V. centra′les**, intralobular veins. **V. cerebel′li**, cerebellar veins. **V. cer′ebri inter′næ** or **profun′dæ**, veins of Galen. **V. cilia′res posti′cæ**, venæ vorticosæ. **V. circumflex′æ il′ii tegumento′sæ**, veins accompanying the external circumflex iliac arteries, emptying into the femoral or epigastric vein. **V. circumflex′æ pe′nis**, veins from the corpus cavernosum on the under surface of the penis, emptying into the dorsal vein. **V. comitan′tes**, small veins accompanying the femoral and popliteal arteries. **V. com′ites** or **concom′ites**, veins accompanying arteries; see *Vein*. **V. cor′dis**, cardiac veins. **V. c. min′imæ**, veins of Thebesius. **V. corona′riæ cor′dis**, coronary veins of the heart. **V. costa′les**, intercostal veins. **V. diaphragmat′icæ inferio′res**, phrenic veins. **V. diploet′icæ** or **diplo′icæ**, diploic veins. **V. dorsa′les na′si**, nasal veins. **V. d. pe′dis**, first and fourth metacarpal veins of the back of the foot. **V. emulgen′tes**, renal veins. **V. Gale′ni**, choroid veins. **V. gas′tricæ bre′ves** short branches from the fundus of the stomach, discharging into the splenic vein. **V. glandulo′sæ**, submaxillary veins. **V. hepat′icæ advehen′tes**, branches of the omphalomesenteric vein to the liver. **V. h. revehen′tes**, branches of the omphalomesenteric vein from the liver. **V. inguina′les**, veins from the groin, emptying into the internal saphenous vein. **V. innomina′tæ**, innominate veins. **V. intercapitula′res**, anastomotic branches from the palm of the hand in the interdigital spaces. **V. interlobula′res**, interlobular veins. **V. intralobula′res**, intralobular veins. **V. lac′teæ**, chyliferous vessels. **V. lumba′les transver′sæ**, lumbar veins. **V. lymphat′icæ**, lymphatic vessels. **V. mag′næ spi′næ longitudina′les**, meningorrhachidian veins. **V. mamma′riæ tegumento′sæ**, external mammary veins. **V. medul′læ spina′lis**, medullispinal veins. **V. mesera′icæ**, mesenteric veins. **V. mican′tes pulsat′iles**, an ancient Latin term meaning arteries. **V. min′imæ cor′dis**, see *Foramina Thebesii*. **V. os′sium cra′nii**, diploic veins. **V. pinna′les**, lateral nasal veins. **V. pulmona′res**, pulmonary veins. **V. pulsat′iles**, v. micantes pulsatiles. **V. rec′tæ**, veins from the papillæ of the kidney between the tubes to the venæ renales. **V. rena′les**, renal veins. **V. revehen′tes**, venæ hepaticæ revehentes. **V. satel′lites arteria′rum**, venæ comites. **V. sopora′les**, jugular veins. **V. spermat′icæ**, spermatic veins. **V. sphagit′ides**, jugular veins. **V. spina′les exter′næ posterio′res**, dorsispinal veins. **V. s. pro′priæ**, medullispinal veins. **V. stella′tæ** or **stellula′tæ**, stellate veins. **V. sublobula′res**, sublobular veins. **V. Thebe′sii**, see *Foramina Thebesii*. **V. thym′icæ**, thymic veins. **V. transver′sæ scap′ulæ**, suprascapular veins. **V. vertebrolumba′res**, lumbar veins. **V. Vieussen′ii**, smallest cardic veins. **V. vortico′sæ**, vasa vorticosa.

**Venæsec′tio** (*vena*, vein, *seco*, to cut). Bloodletting.

**Ve′nal.** Venous.

**Vena′tion.** The mode of distribution of the veins of a leaf or of an insect's wings.

**Venena′tion** (*venenum*, poison). Poison; poisoning

**Ven′enose.** Venomous.

**Vene′num.** Poison; venom.

**Vene′real.** That which relates to sexual intercourse. **V. disease′**, syphilis, gonorrhœa, or chancroid. **V. wart**, condyloma acuminatum, verruca acuminata.

**Vene′reous.** Aphrodisiac.

**Veneriv′agus.** Libidinous.

**Ven′erous.** Venereous.

**Ven′ery.** Indulgence of the sexual appetite.

**Venesec′tion** (*vena*, vein, *seco*, to cut). Bloodletting.

**Ven′ice tur′pentine.** See *Pinus larix.*

**Ven′iplex.** A plexus of veins.

**Venipunc′ture.** Puncture into a vein.

**Ven′om.** Poisonous fluid secreted by certain animals, as the viper, in a state of health, and which they preserve in a particular reservoir to use as a means of attack or defence. It differs from virus, as the latter is always the result of a morbid process, which may be produced by the individuals who receive it in their turn, and be transmitted to others. **V.-globulin′**, a globulin found in snake-poison. **V.-pep′tone**, a peptone found in snake or other animal poison. **Quick′ening** or **Vi′tal v.**, sperm.

**Ven′omous.** Venenose. An epithet applied to animals which have a secretion of venom, as the viper, rattlesnake, etc., as well as to the venom itself; and also to liquids in the animal body, so perverted by previous disease that their contact occasions serious mischief in sound individuals, as happens in hydrophobia. Virulent is more commonly used in this case.

**Venos′itas** (*vena*, vein). Venosity.

**Venos′ity.** Abundance of veins in a part; afflux of blood into the veins. Venous state or cachexia. Term formerly applied to a condition in which it was supposed the blood moved slowly, was more venous, and the venous blood itself was in greater quantity, as in hemorrhoids, gout, hypochondriasis, etc.

**Ve′nous** (*vena*, vein). Venal. Appertaining to a vein or to the blood of the veins, as venous cachexia, venous pulse, etc. **V. cachex′ia**, venosity. **V. hum**, bruit de diable. **V. næ′vus**, nævus vascularis. **V. pulsa′tion** or **pulse**, pulsus venarum. **V. state**, venosity. **V. sys′tem**, see *Vascular*. **V. sys′tem, abdom′inal**, portal system. **V. sys′tem of Ja′cobson**, a system of vessels in the three classes of vertebrated animals other than the mammalia, which forms a communication between the vena porta and the vena cava.

**Ve′nousness.** Venosity.

**Vent.** An outlet. The anus.

**Ven′ter.** Abdomen, belly, uterus. In law, venter designates the maternal parentage of children; thus, if A were B's child by his first wife, he would be described in law as "by the first *venter*." In anatomy, broad surface of a muscle or a bone. **V. of il′ium**, iliac fossa. **V. i′mus** (lowest belly), abdomen, hypogastrium. **V. infe′rior**, abdomen. **V. in′fimus**, abdomen. **V. of the kid′ney**, the pelvis of the kidney. **V. mag′nus**, ingluvies. **V. me′dius**, thorax. **V. mus′culi**, see *Muscle*. **V. par′vus**, hypogastrium. **V. propen′dens**, anterior obliquity of the uterus. **V. re′num**, pelvis of the kidney. **V. supre′mus**, cavity of the cranium.

**Ventila′tion** (*ventilo*, to fan, from *ventus*, wind). The act of renewing the air of vessels, hospitals, apartments, and all places where many people are collected together.

**Ven′tilator.** Device used for the purpose of renewing the air in ships, apartments, etc.

**Ventos′ity** (*ventus*, wind). Flatulence.

**Ven′trad.** Toward the ventral aspect; in man, toward the front.

**Ven′tral** (*venter*, belly). Abdominal. **V. as′pect,** abdominal aspect. **V. her′nia,** direct hernia occurring in any part of the abdomen, most frequently found between the recti muscles. When the hernia takes place below the xiphoid cartilage it is called epigastric hernia; when in the loins, lumbar hernia.

**Ventra′le.** Belly-band; belt. **V. cuta′neum,** cutaneous apron; an elongation of the nymphæ in the South African native women, which hangs down before the vulva like an apron.

**Ven′tre inspicien′do.** See *De ventre inspiciendo.*

**Ven′tricle** (dim. of *venter*, belly). Literally, a little belly. A name given, in anatomy, to various small cavities. See also *Ventriculi* and *Ventriculus.* **V. of Aran′tius,** cavity of Aranzi; a small cavity, lined with gray substance, at the point of the calamus scriptorius. **V. of the brain,** one of five cavities in the interior of that organ, which are distinguished as the lateral ventricles, middle ventricle, fourth ventricle or ventricle of the cerebellum, and fifth ventricle. The middle ventricle or third ventricle is situated in front of the pineal gland. It communicates with the lateral ventricles by two openings situated behind the anterior pillar or crus of the fornix. The lateral ventricles are two in number. They are large, and, owing to their considerable curvature, occupy a great part of the cerebral centre. Internally they are separated from each other by the septum of the ventricles—a medullary plate given off from the lower part of the corpus callosum. The lateral ventricles have, in their upper and anterior portion, the corpora striata, thalami optici, and tænia semicircularis; their inferior portion contains the corpus fimbriatum, cornu ammonis, etc. The fourth ventricle is situated beneath the aqueduct of Sylvius, by which it communicates with the third ventricle. It extends from this aqueduct to the upper part of the medulla, and is seated in the substance of the tuber annulare. The fifth ventricle, v. of the septum, Sylvian v., v. of Vieussens, is a small serous cavity between the laminæ of the septum lucidum called, also, sinus of the septum lucidum, s. of the median septum. **V. of cerebel′lum,** see *V. of the brain.* **V. of cor′pus callo′sum,** sulcus corporis callosi, the space intervening between the labium cerebri and corpus callosum. **Dun′can's v.,** fifth v. **Fifth v.,** see *V. of the brain.* **Fourth v.,** see *V. of the brain.* **Ga′len's v.,** v. of the larynx. **V. of the heart,** these are two in number. The *right* or *pulmonary v.* is situated at the forepart of the heart, the base and apex corresponding to those of the heart. In it are seen the columnæ carneæ and chordæ tendineæ. The right ventricle communicates with the right auricle by the ostium venosum, and from it the pulmonary artery arises. Around the auricular orifice is a tendinous margin or ring from which the tricuspid valve is given off. The use of the ventricle is to send the blood, by its contraction, along the pulmonary artery to the lungs. The *left ventricle* is situated at the posterior and left part of the heart. Its parietes are thrice thicker and stronger than those of the right, owing to its having to send the blood over the whole system. The inner surface has the same general appearance as that of the right. The columnæ carneæ and chordæ tendineæ are, however, much stronger. It communicates with the left auricle by means of the mitral valve, and from it proceeds the largest blood-vessel of the body—the aorta. **Krause's v.,** cavity in the conus terminalis of the spinal cord. **V. of the lar′ynx,** sinus of the larynx; one of two depressions in the larynx, comprised between the superior and inferior ligaments. **Lat′eral v.,** see *V. of the brain.* **Left v.,** see *V. of the heart.* **Mid′dle v.,** see *V. of the brain.* **Morgagn′i's v.,** v. of larynx. **Myelon′ic v.,** the central cavity of the spinal cord. **Olfac′tory v.,** prolongation of the lateral ventricle into the olfactory lobe; constant in the fœtus and many of the lower animals; sometimes present in the adult. **Pin′eal v.,** cavity in the interior of the pineal gland, present in the fœtus and occasionally in post-uterine life. **Pul′monary v.,** see *V. of the heart.* **Right v.,** see *V. of the heart.* **V. of the sep′tum,** see *V. of the brain.* **Sixth v.,** a cavity sometimes noted between the fornix and the corpus callosum. **Syl′vian v.,** see *V. of the brain.* **Ter′minal v.,** Krause's v. **Third v.,** see *V. of the brain.* **Ver′ga's v.,** sixth v. **V. of Vieus′sens,** see *V. of the brain.*

**Ventricor′nu.** Anterior cornu or horn of gray matter of the spinal cord.

**Ven′tricose** or **Ven′tricous.** Abdominous. Bellied. Having a large belly.

**Ventric′ular.** Relating to a ventricle. **V. aq′ueduct,** see *Aquæductus Sylvii.* **V. band,** chorda vocalis spuria. **V. lig′ament,** one of the false vocal cords. **V. mus′cle,** ventricularis. **V. sep′tum,** septum cordis; also septum lucidum.

**Ventricula′ris.** Thyroepiglottideus muscle.

**Ventric′uli** (pl. or gen. of ventriculus) **anterio′res.** Lateral ventricles. **V. cer′ebri,** ventricles of the brain. **V. cor′dis,** ventricles of the heart. **V. dilata′tio,** dilatation of the stomach. **V. dissolu′tio** softening of the stomach. **V. du′ræ ma′tris,** sinuses of the dura mater. **V. emollit′io,** softening of the stomach. **V. exulcera′tio,** ulceration of the stomach. **V. flux′us,** gastrorrhœa. **V. inflamma′tio,** gastritis. **V. larynge′i,** ventricles of the larynx. **V. latera′les,** see *Ventricles of the brain.* **V. mag′ni,** lateral ventricles of the brain. **V. majo′res,** lateral ventricles. **V. metamorpho′sis gelatinifor′mis,** softening of the stomach. **V. Morgagn′ii,** ventricles of the larynx. **V. perfora′tio,** perforation of the stomach. **V. prio′res,** lateral ventricles. **V. pseudophlogo′sis resoluti′va et colliquati′va,** softening of the stomach. **V. superio′res,** lateral ventricles. **V. tricor′nes,** lateral ventricles. **V. ulcera′tio,** ulceration of the stomach.

**Ventric′ulus** (dim. of *venter*, belly). Stomach; ventricle. **V. ante′rior,** right cardiac ventricle. **V. aor′ticus,** left cardiac ventricle. **V. Aran′tii,** see *Ventricles of the brain.* **V. bul′bi olfacto′rii,** olfactory ventricle. **V. bulbo′sus,** v. callosus. **V. callo′sus** (callous stomach), the gizzard or third stomach of the gallinaceous birds, consisting of a double-bellied or digastric muscle. It is lined by a firm cuticle, and forms a kind of pouch, depending from the alimentary tube, in which the second stomach terminates, and from which the duodenum or ventriculus succenturiatus issues. The gizzard is an organ of mastication, and is possessed of great muscular power. **V. cerebel′li,** see *Ventricles of the brain.* **V. cona′rii,** pineal ventricle. **V. cor′poris callo′si,** sulcus of the corpus callosum. **V. Gale′ni,** ventricle of the larynx. **V. interme′dius,** third ventricle. **V. intestina′lis,** abomasus. **V. latera′lis,** lateral ventricle. **V. mag′nus,** lateral ventricle of the brain. **V. me′dius,** third ventricle. **V. Morgagn′ii,** ventricle of the larynx. **V. olfacto′rius,** cavity existing during fetal life in the olfactory bulb, which closes after birth. **V. perfora′tus,** perforation of the stomach. **V. poste′rior,** left ventricle. **V. pri′mus,** right ventricle. **V. pulmona′lis,** right ventricle. **V. quar′tus,** see *Ventricles of the brain.* **V. secun′dus,** left ventricle. **V. sep′ti pellu′cidi,** see *Ventricles of the brain.* **V. succenturia′tus,** duodenum; see *Ventriculus callosus.* **V. termina′lis,** terminal ventricle. **V. tricor′nis cer′ebri,** lateral ventricle of the brain. **V. Ver′gæ,** Verga's ventricle.

**Ventricum′bent.** Prone.

**Ventriduc′tion** (*duco*, to lead). Carrying toward the belly.

**Ventrifixa′tion.** Ventrofixation.

**Ventrime′son.** Middle line of the belly.

**Ventrip′otent** (*venter*, belly, *potens*, powerful). Abdominous.

**Ventripyr′amid.** Anterior pyramid situated in the medulla oblongata.

**Ventrocystor′rhaphy** (*rhaphe*, suture). Fastening a bladder or cyst to the wall of the abdomen by a suture.

**Ventrofixa'tion.** Operation consisting in laparotomy, breaking up adhesions of the uterus, bringing forward the fundus, and suturing it to the anterior abdominal wall with catgut or other appropriate suture.

**Ventro-in'guinal** (*venter*, belly, *inguen*, groin). Relating to the abdomen and groin, as *ventro-inguinal* hernia.

**Ventrolat'eral.** Ventral, or anterior, and lateral.

**Ventrome'dian.** Ventral, or anterior, and median.

**Ventros'copy.** Inspection of the abdominal cavity by electrical illumination.

**Ven'trose.** Abdominous; having a swollen belly.

**Ventros'ity** (*venter*, belly). Excessive corpulency.

**Ventrosuspen'sion.** Restoration of the uterus to an approximately normal position by fixation to the abdominal wall by suture.

**Ventrot'omy.** Operation of opening the abdominal cavity by incision.

**Ventrovesicofixa'tion.** Operation of attaching the uterus to the bladder and abdominal wall.

**Ven'tus.** Wind.

**Ve'nula** or **Ve'nule** (dim. of vena). Minute vein or venous radicle.

**Ve'nulæ centra'les** or **intralobula'res.** Intralobular veins.

**Ve'nus** (the goddess of love). Clitoris; coition; venery. Cuprum. **Crys'tals of v.,** cupri subacetas. **V.'s fly-catcher,** Dionæa muscipula.

**Veratralbine'.** $C_{28}H_{43}NO_5$. Very powerful alkaloid contained in Veratrum album.

**Verat'ric acid.** An acid derived from veratrine by the process of saponification.

**Veratri'na.** (Ph. U. S. and Br.) Veratrine. An alkaloid or mixture of alkaloids prepared from the seeds of Asagræa officinalis. Veratrine is solid, white, pulverulent, and inodorous; soluble in water and in alcohol. When prepared in the usual manner it still contains other substances—*sabadilline*, *viridine*, *veratroidine*, gum resin of sabadilla, and black, greasy matter. It is extremely poisonous, and but little used internally in medicine; dose, gr. $\frac{1}{50}$–$\frac{1}{10}$ (0.0013–0.0065). It is applied externally in the official *olea'tum veratri'næ* or *unguen'tum v.* The two alkaloids, *viridine* and *veratroidine*, which are obtained from veratrine, are depressants of the circulation; viridine produces death, however, by paralysis of the respiratory nervous system; veratroidine by asphyxia.

**Veratrine'.** Veratrina.

**Verat'rinize.** To place under the influence of veratrine.

**Veratroidine'.** See *Veratrina*.

**Ver'atrol.** Dimethyl pyrocatechin. Clear, caustic liquid. Antiseptic; also used externally in neuralgia and epididymitis.

**Veratroylaconine'.** $C_{36}H_{49}NO_{11}$. Pseudoaconitine.

**Vera'trum.** A genus of liliaceous plants. Hellebore. **V. al'bum,** white hellebore. The root or rhizome of this common European plant is indebted to veratrine for its properties. It is violently emetic and purgative, even when applied to an ulcerated surface; it is also possessed of errhine properties, and acts externally as a stimulant. It is rarely exhibited internally. Sometimes it is given as a sneezing-powder, but it operates with great violence. It also forms an itch ointment. **V. lu'teum,** Chamælirium luteum. **V. sabadil'la,** cevadilla, sevadilla; the seeds—dried fruit—of this plant have been used mostly as anthelmintics. It possesses the same general properties as the Veratrum album. Sabadilla (Ph. Br.) is the dried ripe seeds of Schœnocaulon officinale. Powdered sabadilla, under the name *poudre des Capuchins*, was formerly employed for destroying lice and vermin. **V. vir'ide** (Ph. U. S.), American or green hellebore, swamp hellebore, Indian poke, Indian uncas, poke-weed, bear-weed, itch-weed, tickle-weed, earthgall, devil-bit, wolf-bane, puppet-weed, is indigenous to the swampy districts of almost every part of the United States; the properties of the rhizome are like those of other plants of the genus. It has been employed as a powerful sedative in inflammatory diseases. The official preparations are: *Extrac'tum vera'tri vir'idis flu'idum;* dose, ♏j–iij (0.65–0.2); *tinctu'ra v. v.;* dose, ♏j–viij (0.065–0.5).

**Ver'bal amne'sia.** Amnesic aphasia. See *Aphasia*.

**Verbas'culum.** Primula veris.

**Verbas'cum ala'tum.** V. thapsus. **V. al'bum,** V. thapsus. **V. colli'num,** V. thapsus. **V. crassifo'lium,** V. thapsus. **V. elonga'tum,** V. thapsus. **V. lychni'tis,** V. thapsus. **V. monta'num,** V. thapsus. **V. ni'grum,** black mullein. **V. sim'plex,** V. thapsus. **V. thap'sus,** phlox, great broad-leaved or yellow mullein, high taper, cow's lungwort, ord. *Scrophulariaceæ;* this species and V. nigrum have been used as emollients, applied externally in the form of fomentation, the large leaves being chosen for this purpose; the mucilage which they contain has been extracted by decoction or infusion, and administered in pectoral affections.

**Verbe'na hasta'ta.** Blue vervain, simpler's joy, an American species, is more bitter than the European, and said to be emetic. **V. officina'lis,** vervain, purvain, Juno's tears, ord. *Verbenaceæ;* plant formerly held sacred, used in sacrifices and suspended around the neck as an amulet. **V. panicula'ta,** V. hastata. **V. triphyl'la,** herb whose aroma resembles that of a lemon; has stomachic and antispasmodic properties. **V. urticifo'lia,** an indigenous species, has been used in poisoning by Rhus toxicodendron.

**Verben'aca.** Verbena officinalis.

**Verbesi'na acmel'la.** Spilanthus acmella. **V. virgin'ica,** crown beard; indigenous; ord. *Compositæ.* A decoction of the root is used by the Indians as a diaphoretic and depurative.

**Verbigera'tion** (*verbum*, word, *gero*, to carry). The frequent repetition of words which have no meaning or connection in continued order.

**Ver'det** (Fr.) (*viridis*, green). Cupri subacetas; also a fungous parasitic disease of maize.

**Ver'digris** (*viridis*, green, *gris*, gray). Basic acetate of copper. It sometimes forms on copper cooking utensils, giving rise to food poisoning.

**Veren'da** (*vereor*, to reverence). Genital organs.

**Ver'etrum.** Penis. Vulva.

**Ver'ga's lac'rymal groove.** Groove passing downward from the inferior opening of the nasal duct. **V.'s ven'tricle,** space resembling a cleft occasionally found between the medullary layer which serves as a connection between the columnæ fornicis and the corpus callosum.

**Ver'gens.** Inclining. **V. deor'sum,** inclining downward, as the axis of the eye in strabismus. **V. sur'sum,** inclining upward.

**Verhey'en, stars of.** Stellate veins.

**Verine'.** Compound produced by saponification of veratrine.

**Ver'juice** (*verd*, green, *jus*, juice). Juice of green fruits, especially of very sour grapes or crab-apples.

**Vermale's' amputa'tion.** Amputation above the knee by lateral flaps.

**Ver'mes** (pl. of vermis). Worms. **V. cer'ebri,** choroid plexus. **V. intesti'ni** or **intestina'les,** see *Worms*.

**Vermici'dal.** Anthelmintic.

**Ver'micide** (*vermis*, worm, *cædo*, to kill). A medicinal agent employed to kill intestinal worms.

**Vermic'ular.** Vermiform. Worm-like, as the vermicular motion of peristalsis of the intestines. **V. sul'ci,** furrows which divide the vermis from the lateral hemispheres of the cerebellum.

**Vermicula'ris.** Lumbricalis sedum.

**Vermic'ulate.** Vermicular.

**Vermicula'tion** (*vermis*, worm). Moving like a worm, as in the peristaltic motion of the intestines.

**Vermic'ulus.** Motile fertilized macrogamete of the malarial parasite. **V. capilla'ris,** dracunculus.

**Ver'miform** (*vermis*, worm, *forma*, form). That which resembles a worm. **V. appen'dix,** see *Appendix*. **V. pro'cesses,** two medullary projections at the surface of the cerebellum. The superior vermiform process, vermis superior cerebelli, is an elongated projection at the anterior and middle part of the superior surface of the cerebellum; and the inferior vermifor mprocess, vermis inferior cerebelli, pyramid of Malacarne, is a somewhat larger projection situated in the depression at the inferior surface of the same organ. The inferior vermiform process is usually described as consisting of three portions —the pyramid, the uvula, and the nodulus. The anterior portion of the superior vermifor m process is elevated, and termed monticulus. In front of this process is a notch which encircles the corpora quadrigemina posteriorly, called incisura cerebelli anterior; and behind the isthmus is another notch, called incisura cerebelli posterior.

**Vermif′ugal.** Having the action of a vermifuge.

**Ver′mifuge** (*vermis*, worm, *fugo*, to drive away). An agent which expels intestinal worms.

**Vermil′ion.** Red sulphide of mercury; cinnabar.

**Vermina′tion.** Helminthiasis. **Cuta′neous v.**, infestation of the cuticle or skin with animal parasites.

**Ver′minous** (*vermis*, worm). Caused by worms.

**Ver′mis** (worm). Middle lobe of the cerebellum. **V. bombyc′inus,** cornu ammonis. **V. cerebel′li,** vermiform process. **V. cer′ebri,** Hungary fever. **V. cucurbiti′nus,** Tænia solium. **V. dig′iti,** paronychia. **V. guinien′sis,** Filaria medinensis. **Infe′rior v.,** lower aspect of the middle lobe of the cerebellum. **Supe′rior v.,** upper aspect of the middle lobe of the cerebellum.

**Vermi′tio** (*vermis*, worm). Helminthiasis.

**Ver′mouth.** A wine slightly tinctured with absinthium.

**Ver′nal.** Belonging to the spring. **V. catarrh′,** a periodically recurring rhinitis, resembling hay fever, but occurring in the spring. **V. conjunctivi′tis,** conjunctivitis in young people, making its appearance every spring or in the summer, and ceasing with frost. **V. fe′ver,** malarial fever.

**Verneuil's′ amputa′tion.** See *Amputation.*

**Ver′nier.** A scale attached to graduated instruments for the purpose of measuring fractional parts of the usual divisions of the scale.

**Vernine′.** Alkaloid in young clover, in ergot, etc.; when heated with hydrochloric acid guanin is obtained.

**Ver′nix caseo′sa** (cheesy varnish). The fatty varnish or deposit on the skin of the fœtus, which is secreted by the sebaceous follicles of the skin. **V. sic′ca,** dry varnish, sandarac.

**Verno′nia anthelmin′tica.** Plant indigenous in India, ord. *Compositæ;* had great celebrity in the East Indies, and is a bitter tonic, but the seeds are chiefly used as an anthelmintic for ascarides and lumbrici in children. **V. nigritia′na,** plant, native of Africa; root is febrifuge. **V. noveboracen′sis,** iron weed, flat top, and **V. fascicula′ta,** an indigenous plant, are reputed to possess cathartic properties.

**Vernonin′.** Active principle obtained from the root of Vernonia nigritiana. Its action resembles that of digitalin, but it is not so poisonous as the latter.

**Veron′ica.** Male veronica, pluellin, official speedwell, eyebright, Paul's betony, ord. *Scrophulariaceæ;* once used as a pectoral. **V. aquat′ica,** V. beccabunga. **V. beccabun′ga,** water pimpernel, brooklime, brooklime speedwell, water speedwell, neckweed, water purslain; plant formerly used in a variety of diseases. **V. mas,** veronica. **V. officina′lis,** veronica. **V. parviflo′ra,** plant of New Zealand; reputed to be useful in chronic dysentery. **V. peregri′na,** neckweed, purslain, speedwell; indigenous; has been given internally in scrophulosis, and applied as a wash to scrofulous tumors. **V. purpu′rea,** Betonica officinalis. **V. quinquefo′lia,** East Indian remedy for leprosy; the root is the part employed. **V. tournefort′ii,** veronica. **V. virgin′ica,** Leptandra virginica.

**Verru′ca.** Excrescence, wart. A small, hard, mammillary tumor which forms at the surface of the skin, and particularly on that of the hands and face. Warts are generally rugous at the surface and broad at the base, their roots being implanted in the derma by whitish filaments, which are dense, semifibrous, and very numerous. The flat wart is called *v. simplex;* the pedunculated, *v. digitata.* Warts may be destroyed by caustic or removed by excision; their vitality is, generally, not great. **V. acumina′ta,** the venereal wart, moist wart, consists of one or a number of pointed, mulberry, or cauliflower-like elevations situated upon the genitalia and adjoining regions. **V. a′ni,** see *Condyloma.* **V. carno′sa,** condyloma. **V. digita′ta,** see *Verruca.* **V. filifor′mis,** small wart, thread-like and with pointed end, usually located on the face, eyelids, and neck. **V. formica′ria,** formica. **V. gla′bra,** variety with smooth surface. **V. mi′nor,** a small wart on the skin resembling a bud of thyme. **V. mollus′ca,** condyloma. **V. necrogen′ica,** dissection tubercle, anatomical tubercle, post-mortem wart; an overgrowth of epithelium, caused in dissecting by the acrid fluids of the dead body. **V. pen′silis,** a hard wart which hangs by a pedicle. **V. perua′na,** verugas. **V. pla′na** or **seni′lis,** variety which is flat and generally round and broad; usually occurs on the back or face in elderly people. **V. rhagoide′a,** a small wart on the skin resembling a bud of thyme. **V. sim′plex,** see *Verruca.*

**Verruca′ria.** Calendula officinalis; Heliotropium europæum.

**Verru′ciform.** Resembling a wart.

**Ver′rucose** or **Ver′rucous.** Warty.

**Verrucos′ity.** Condition of having warts. **V. of the conjuncti′va,** granular condition of the eyelids.

**Verru′cula.** Small wart.

**Verru′ga** or **Verru′gas.** Verugas.

**Ver′sion.** Turning, especially turning of the fœtus in utero to remedy a malpresentation. **Abdom′inal v.,** turning of the fœtus by manipulation effected externally through the abdominal wall. **Biman′ual** or **bipo′lar v.,** turning effected by one hand or finger in the vagina acting upon one extremity of the fœtus, the other hand acting upon the other extremity through the abdominal parietes. **Cephal′ic v.,** turning the fœtus so that the head presents. **Exter′nal v.,** abdominal v. **Inter′nal v.,** turning by the introduction of the hand into the uterus, seizing and pulling down the part desired. **Pel′vic v.,** operation of turning the fœtus so that the breech presents. **Podal′ic v.,** turning the fœtus so that one or both feet present. **Sponta′neous v.,** turning of the fœtus in utero, so that the presentation is changed, without the assistance of the accoucheur.

**Verstrae′tin's bruit.** A sound heard on auscultation over the inferior border of the liver in some forms of cachexia.

**Ver′tebra** (*verto*, to turn). One of the bones which by their union form the vertebral or spinal column; they are short, thick, very angular bones, situated one above another. The body or centrum of the vertebra is the middle and anterior portion. Above and below it is articulated by means of a fibrocartilage with the contiguous vertebra. The processes

of each vertebra are: the *spinous* process, situated behind and in the median line; the two *transverse* processes, standing off from each side; the four *articular* or *oblique* processes—zygapophyses, two superior and two inferior—which serve to unite the vertebræ with each other. These transverse and articulating processes are made continuous with the lateral and posterior parts of the body of the vertebra by narrow, bony portions or pedicles, on each of which are notches. These by their union with similar notches in the contiguous vertebra form the lateral foramina, through which the spinal nerves leave the vertebral canal. The different processes are united with each other so as to form a kind of ring of lateral and posterior parts of the vertebra, and the foramen within this—that is, between the body and processes, foramen vertebrale rachidium—concurs in forming the vertebral canal. The *arch* or *lamina* of a vertebra, neurapophysis, is the part from which the several processes project. The vertebræ have particular characters according to the regions they occupy. They are divided into seven cervical, twelve dorsal, five lumbar, five sacral, fused together into one mass, the sacrum, and four coccygeal, also fused to form the coccyx; thirty-three in all, or twenty-four, omitting the sacrum and coccyx. The first cervical is called the atlas; the second, axis or vertebra dentata; and the seventh, vertebra proeminens or prominens. The vertebræ are articulated with each other. Those of the back are joined, moreover, to the ribs by their articulating surfaces—parapophyses. The first or atlas is articulated with the occipital bone, and the last lumbar vertebra with the sacrum. Measurements of the vertebræ may be found under the heading *Man*. **V. abdomina′lis**, a lumbar v. **V. cauda′lis**, sacral v. **Cer′vical v.**, one of the seven bones of the neck. **V. coccygea′lis**, one of the vertebræ from whose fusion the coccyx is formed. **V. col′li**, cervical v. **Cra′nial v.**, one of the segments of the cranium homologous with a vertebra; there are four of these, the occipital, the parietal, the frontal, and the nasal—or the epencephalic, the mesencephalic, the prosencephalic, and the rhinencephalic. **V. denta′ta**, axis. **Dor′sal v.**, one of the twelve vertebræ which constitute the dorsal spine, articulating with the ribs. **False v.**, one of the fused vertebræ forming the sacrum or the coccyx. **Lum′bar v.**, one of the five bones forming the lumbar spine between the last ribs and the sacrum. **V. mag′na**, the sacrum. **Odon′toid v.**, the axis. **V. prom′inens**, seventh cervical v. **V. sacra′lis**, one of the fused vertebræ forming the sacrum. **V. spu′ria**, false v. **Ster′nal v.**, one of the segments of the sternum. **Thorac′ic v.**, dorsal v. **True v.** or **V. ve′ra**, any of the vertebræ exclusive of those whose fusion results in the sacrum or coccyx.

**Ver′tebral.** That which relates or belongs to the vertebræ. **V. aponeuro′sis**, fascia vertebralis. **V. arch**, neural arch. **V. ar′tery**, posterior cerebral artery, the largest of the branches of the subclavian, arises from the posterior part of that vessel; is lodged in a canal formed by the foramina in the transverse processes; enters the cranium, and proceeds to anastomose with its fellow of the opposite side and to form the basilary artery. **V. canal′**, see *Vertebral column.* **V. ca′ries**, v. disease. **V. col′umn**, spine, backbone; a kind of bony column situated at the posterior and central part of the trunk; extending from the head to the pelvis; flexible in every direction, yet very solid, and hollowed by a canal called vertebral, which gives it lightness without diminishing its strength, and runs through its whole length. The vertebral column is formed by the superposition of the vertebræ. It represents a pyramid whose base is below. Anteriorly, it is convex in the neck, concave in the back, and convex, again, in the loins. Behind, the curvatures are, of course, the reverse of these. There is also in the dorsal region a lateral curvature, the concavity of which is toward the left side. Considered as a whole, the vertebral column has an anterior or prespinal surface, a posterior or spinal, two lateral, a base, and an apex or top. In the nomenclature of Chaussier the anterior surface, in the neck, is called trachelian; in the back, predorsal; and in the loins, prelumbar. The dorsal surface has at its middle the spinous processes, and at its sides the vertebral gutters formed by the union of the vertebral plates, which by their junction constitute the spinous processes. These are filled by the sacrospinalis muscle. The sides or lateral surfaces present the foramina resulting from the union of the vertebral notches. These are called vertebral foramina, and give passage to the vertebral nerves. The base of the vertebral column is oblique, to unite with the sacrum, and forms with it an angle called sacrovertebral angle or promontory. The apex or top of the vertebral column is articulated with the occipital bone. Sometimes the term vertebral column includes the whole of the column from the occipital bone to the extremity of the coccyx. The *vertebral* or *spinal* or *rachidian canal, solen, canalis vertebralis* or *medullæ spinalis*, exists through the whole of the vertebral column, whose curvatures it follows. It is continuous, above, with the cranium; below, with the sacral canal, if we consider the vertebræ to terminate at the sacrum. It is lined by a prolongation of the meninges, forming the theca vertebralis, and lodges the spinal marrow. The vertebral column, which unites lightness with solidity, serves to support the head and chest. It is the seat of all the movements of the trunk, the weight of which it transmits to the pelvis. It lodges and protects the spinal marrow, and gives passage to the vertebral nerves and to numerous vessels. **V. disease′**, rhachialgia, spondylitis, caries of the vertebræ. The spinal column is liable to distortion at times without the vertebræ being much, if at all, diseased. At other times a more formidable affection is induced, the vertebræ becoming carious and the intervertebral cartilages ulcerated, followed by a more or less complete loss of power over the lower extremities. In such case, on examining the spine, one or more of the spinous processes are found to project beyond the rest. The disease was first well described by Mr. Percival Pott, and hence it has been called Pott's disease or boss or curvature. It is a form of local tuberculosis. **V. fora′men**, see *Vertebræ*. **V. groove**, a depression, filled by muscular masses, on either side of the spine. **V. lig′aments**, these are anterior and posterior. They consist of long, ligamentous coverings, the anterior occupying the anterior part of the vertebral column, and the posterior seeming to arise from the occipito-axoid ligament, and seated behind the bodies of the vertebræ from the axis to the sacrum. **V. nerve**, trisplanchnic. **V. nerves**, spinal nerves, spring successively from the spinal cord, from its origin to its termination. These nerves—thirty pairs in all—arise by two roots, one anterior, from the anterior or anterolateral column of the spinal marrow, and the other posterior, from the posterior or posterolateral column, and afterward issue by the vertebral and sacral foramina. Each of these roots has a distinct function, the posterior being destined to convey sensation to parts; the anterior, motion. The posterior root, however, gives occasion, by its influence on the anterior, to reflex movements, while the anterior, by reacting on the posterior, induces the phenomena of *recurrent sensibility*. On the posterior root, before its junction with the anterior, there is a ganglion, intervertebral ganglion. Of the thirty pairs of nerves, seven are cervical, twelve dorsal, five lumbar, and six sacral. **V. plex′us**, sympathetic nerve along the vertebral artery. **V. polyarthri′tis**, see *Polyarthritis*. **V. ribs**, floating ribs. **V. seg′ment**, a somatome, protovertebra, or mesoblastic segment; also one of the leaflets of the cardiac valves. **V. sheath**, see *Vertebral column*. **V. vein**, this vein collects the blood from the veins from the vertebral canal and neck and empties into the innominate vein. The *anterior v. v.* collects the blood from a plexus over the cervical vertebræ and empties into the vertebral vein; the *posterior v. v.* is the vena cervicalis profunda.

Vertebral caries.

**Vertebra′rium.** Spinal column.

**Vertebrarte′rial fora′men.** Foramen transversarium.

**Vertebra′ta.** Sub-kingdom of the animal kingdom, embracing all animals having an internal jointed bony skeleton with a spinal cord.

**Ver′tebrate.** Having a vertebral column.

**Ver′tebrated.** Provided with vertebræ or jointed segments. **V. probe**, a probe made of a number of freely movable jointed segments, which is used for probing a serpentine fistula or sinus.

**Vertebrec′tomy** (*vertebra+ektome*, excision). Excision of portion of a vertebra.

**Vertebrobas′ilar plex′us.** Vertebral plexus.

**Vertebrochon′dral ribs.** Ribs which are attached posteriorly to the spine and anteriorly to the costal cartilages.

**Vertebrocos′tal.** Relating to the vertebræ and ribs. **V. lig′aments**, ligaments which connect the ribs with the spinal column. **V. ribs**, vertebrochondral ribs.

**Vertebrodym′ia** (*vertebra* + *dyo*, to mingle). See *Somatodymia*.

**Ver′tebro-il′iac.** Iliolumbar.

**Vertebrospi′nal veins.** Those veins which connect plexuses of the spinal canal with the vertebral vein.

**Vertebroster′nal ribs.** Sternal ribs.

**Ver′tex.** The top or highest part or crown of the head; see *Sinciput*. **V. cor′dis**, apex of the heart. **V. cu′biti**, olecranon. **V. pal′pitans**, fontanella. **V. presenta′tion**, see *Presentation*.

**Vertib′ulum** (*verto*, to turn). The rounded head of a bone, as of the humerus. A joint. Trepan.

**Ver′tical.** Relating to the vertex; perpendicular to the plane of the horizon. **V. diam′eter of cra′nium**, line extending from basion to bregma. **V. in′dex**, ratio existing between the greatest height and greatest length of the cranium. **V. plate**, see *Palate-bone*.

**Verticil′lium graph′ii.** Fungus occasionally met with in the external auditory canal, which gives rise to irritation and the discharge of pus.

**Verticotransverse′ circum′ference of skull.** Estimated variously as follows: By Broca, over the surface from one auricular foramen to the other, through the bregma, thence on the under surface to the point of beginning, passing back of the styloid processes and in front of the condyles. By Frankfort agreement, over the superior surface from the auricular foramen to the auricular foramen in a plane vertical to the auriculoinfraorbital plane.

**Vertic′ula, Vertic′ulum,** or **Vertic′ulus** (*verto*, to turn). Articulation.

**Vertig′inous.** Relating or pertaining to vertigo; giddy; dizzy.

**Verti′go** (generally pronounced ver′te-go) (*verto*, to turn). Giddiness, dizziness, swimming of the head. A state in which it seems that all objects are turning round, or that the individual himself is performing a movement of gyration—*vertigo gyrosa*. Two varieties have been designated: simple vertigo, in which objects are distinguished; and scotodynia, in which the sight is obscured and the individual often falls. Vertigo is dependent upon the condition of the brain as affected by the circulation, and often announces an attack of apoplexy or epilepsy. **Au′ditory** or **au′ral v.**, Ménière's disease or labyrinthine vertigo. **V. ab au′re læ′so**, Ménière's disease. **Cardiovas′cular v.**, v. occurring in valvular disease of the heart, especially aortic insufficiency and arteriosclerosis. **Cerebel′lar v.**, v. from pressure of a tumor on the cerebellum. **Cer′ebral v.**, v. due to disorder of the brain. **Epilep′tic v.**, a form of v. accompanying an epileptic attack. **Essen′tial v.**, v. occurring without any traceable cause. **Gas′tric v.**, v. dependent on irritation of the stomach, as in dyspepsia. **V. gyro′sa**, see *Vertigo*. **Labyrin′thine v.**, Ménière's disease. **Laryn′geal v.**, see *Laryngeal*. **Lithæ′mic v.**, v. connected with gout or lithæmia. **Mechan′ical v.**, v. from mechanical causes, such as the v. from swinging or seasickness. **Neurasthen′ic v.**, v. met with in neurasthenia. **Objec′tive v.**, vertigo in which the patient imagines that objects move. **Oc′ular v.**, v. caused by lack of balance of the muscles of the eye. **Organ′ic v.**, v. due to some lesion of the brain. **Par′alyzing v.**, Gerlier's disease; v. characterized by paresis and depression, attacking the male sex only. **Periph′eral v.**, v. due to external —not central—influences. **Psy′chical v.**, see *Psychical*. **V. a stom′acho læ′so**, abdominal dizziness; vertigo dependent on or associated with well-marked gastric symptoms. **Subjec′tive v.**, vertigo in which the patient imagines that he is being moved. **V. tenebrico′sa**, giddiness with impaired sight, and sometimes headache. **Toxæ′mic v.**, v. dependent on some poison in the blood. **Tox′ic v.**, v. caused by poisoning. **Ver′tical v.**, v. produced by gazing downward from a height.

**Ve′ru monta′num** (mountain spit). Gallinaginis caput.

**Veru′gas.** Verruca peruana. A peculiar disease affecting the inhabitants of certain localities of Peru, manifesting itself by sore throat, pains in the bones, and other febrile symptoms. An eruption of red pimples soon appears; these sometimes become nearly as large as an egg, and discharge blood copiously. It is ascribed to the water of certain springs in the valleys, and especially in that of Surea, called aqua de veruga.

**Ver′vain.** Verbena officinalis. **Blue v.**, Verbena hastata.

**Vesa′lius's fora′men.** Small aperture in the sphenoid bone, at the inner side of the foramen ovale. **V.'s glands**, bronchial glands. **V.'s lig′ament**, Poupart's ligament. **V.'s ses′amoid bones**, bodies sometimes met with in the tendon of the gastrocnemius muscle. **V.'s vein**, small vein connecting the pterygoid plexus and the cavernous sinus.

**Vesan′ia** (*ve*, negative, *sanus*, sound). Madness; derangement of intellectual and moral faculties, without coma or fever.

**Vesan′iæ.** Insanity; vesania.

**Vesan′ic.** Insane.

**Vesi′ca.** Bladder. **V. bilia′ria**, gall-bladder. **V. cor′dis**, see *Pericardium*. **V. fel′lea**, gall-bladder. **V. intestina′lis**, vesicula umbilicalis. **V. natato′ria**, gall-bladder. **V. prostat′ica**, see *Ejaculatory ducts*. **V. rup′ta**, rupture of the urinary bladder. **V. sacca′ta** or **saccula′ta**, sacculated bladder; stricture; narrowness or inequality of the urinary bladder. **V. urina′ria**, urinary bladder.

**Vesi′cæ irritabil′itas.** Irritability of the bladder. **V. unguino′sæ ten′dinum**, bursæ mucosæ.

**Ves′ical** (*vesica*, bladder). That which belongs or relates to the bladder. **V. ar′teries** vary in number and origin. The umbilical artery always sends off two or three; the middle hemorrhoidal, internal pudic, and obturator furnish others, which ramify and anastomose in the walls of the bladder; the hypogastric furnishes one somewhat larger, the vesicoprostatic, which proceeds to the bas-fond of the bladder, sending numerous ramifications to it as well as to the surrounding parts. **V. cri′ses**, attacks of violent pain in the bladder, met with, like other localized crises, in locomotor ataxia. **V. gan′glia**, see *Spermatic ganglion*. **V. lig′aments**, see *Urinary bladder*. **V. ox′ide**, cystic oxide. **V. plex′us** surrounds the fundus of the urinary bladder and connects with the hemorrhoidal and pudendal plexuses. **V. plex′us of veins**, veins which send branches over the surface of the bladder and which empty into the internal iliac vein. **V. re′flex**, see *Urinary reflex*. **V. sac′culus**, see *Bladder, sacculated*. **V. sphinc′ter**, sphincter vesicæ. **V. tri′angle**, see *Urinary bladder*. **V. u′vula**, see *Urinary bladder*. **V. veins**, much more numerous than the arteries, open into the hypogastric plexus.

**Ves′icant** (*vesica*, bladder). Blister.

**Vesica′rium.** Ovary.

**Ves′icate.** To produce a blister.

**Vesica′tion** (*vesica*, bladder). The action of a vesicant. The formation of blisters.

**Vesicato′rium.** Blister.

**Ves′icatory.** Blister; epispastic.

**Ves′icle** (dim. of *vesica*, bladder). A sac or small bladder-like structure. See also *Vesicula*. **Allan′toic v.**, inner hollow part of the allantois formed by the hypoblast. **Ascherso′nian v.**, when fluid fat and fluid albumin are shaken together the resulting fat-globules become surrounded by an albuminous layer; the vesicles thus formed are called after Ascherson, their describer. **Au′ditory v.**, otic v. **V. of Baer**, the ovule in the follicle of De Graaf, which was well described by Baer in 1827. **Blastoder′mic v.**, see *Molecule*. **Brain** or **cer′ebral v.**, expansion of the epiblast from the embryonic neural canal, forming the brain. **Com′pound v.**, a vesicle composed of several chambers. **Cow′pox v.**, see *Vaccination*. **V. of devel′opment**, vesicle or cyst concerned in histogeny. **Encephal′ic v.**, brain v. **V. of evolu′tion**, v. of development. **Ger′minal v.**, see *Molecule*. **Graaf′ian v.**, see *Folliculi graafiani*. **Malig′nant v.**, anthrax. **Malpigh′ian v.**, pulmonary alveoli. **Oc′ular v.**, prominence in the fœtus which is the first indication of an eye. **Olfac′tory v.**, v. in fetal life which develops later into the olfactory lobe. **Op′tic v.**, expansion of the epiblast from the embryonic neural canal, forming the sentient portion of the eye. **O′tic v.**, expansion of an epiblast from the embryonic neural canal, forming the sentient portion of the ear. **Pri′mary v.**, see *Cerebrum*. **Prostat′ic v.**, sinus pocularis. **Pul′monary v.**, one of the alveoli of the lungs. **Purkin′jean v.**, see *Molecule*. **Sem′inal v.**, pouches for the reception of semen between the rectum and base of the bladder. **Sim′ple v.**, vesicle consisting of a single chamber. **Umbil′ical v.**, vesicula umbilicalis. **Valentin′ian v.**, see *Molecule*. **Wag′ner's v.**, see *Molecule*. **Webe′rian v.**, see *Ejaculatory ducts*.

**Ves′icocele** (*kele*, rupture). Cystocele.

**Vesicocer′vical.** Relating to the bladder and cervix uteri. **V. fis′tula**, fistula existing between the bladder and cervix uteri.

**Vesicoc′lysis** (*klysis*, washing out). Injection of liquid into the bladder.

**Vesicofixa′tion.** Cystopexy. Attachment of the bladder to the abdominal wall, or of the uterus to the bladder.

**Vesicoprostat′ic.** Relating to the bladder and prostate. **V. plex′us**, pudendal plexus.

**Vesicopu′bic.** Relating to the bladder and pubic bone. **V. lig′ament**, a fibrous band passing between the bladder and os pubis. **V. mus′cle**, a muscle of the bladder wall having its fixed attachment to the pubis, concerned in contraction of the bladder.

**Vesicorec′tal.** Relating to the vagina and rectum.

**Vesicospi′nal cen′tre.** Nerve-centre for micturition, situated between the fifth and seventh lumbar vertebræ.

**Vesicot′omy.** Incision into the bladder.

**Ves′ico-umbil′ical.** Relating to the bladder and the umbilicus. **V.-u. lig′aments,** three in number, which connect the bladder with the umbilicus. The middle vesico-umbilical ligament is the obsolete embryonic urachus. The two lateral vesico-umbilical ligaments are the obliterated umbilical arteries, and connect the lateral walls of the bladder with the umbilicus.

**Ves′ico-u′rachal.** Relating to the bladder and urachus, as a vesico-urachal fistula.

**Ves′ico-u′terine.** Relating to the bladder and uterus. **V.-u. folds,** see *Uterus.* **V.-u. pouch,** Douglas's cul-de-sac; see *Uterus.*

**Ves′ico-uterovag′inal.** Relating to the bladder, uterus, and vagina.

**Vesicovag′inal.** Vaginovesical. Relating to the bladder and vagina. **V. ar′tery,** vaginal artery. **V. fis′tula,** fistula existing between the bladder and vagina, resulting from sloughing following difficult and protracted labor, or from ulceration. **V. her′nia,** see *Cystocele.*

**Vesicovaginorec′tal.** Relating to bladder, vagina, and rectum.

**Vesic′ula** (dim. of *vesica,* bladder). Vesicle, blister. Small bladder or cyst; small, orbicular elevation of the cuticle, containing lymph, sometimes clear and colorless, but often opaque and whitish or pearl-colored. It is succeeded either by a scurf or by a laminated scab. See also *Vesicle* and *Vesiculæ.* **V. anigmato′sa,** vesicula umbilicalis. **V. al′ba,** vesicula umbilicalis. **V. bi′lis,** gall-bladder. **V. blastodermat′ica,** see *Molecule.* **V. blastoder′mica,** see *Molecule.* **V. chy′li,** receptaculum chyli. **V. erythroide′a,** erythroid vesicle. **V. fel′lis,** gall-bladder. **V. gangrænes′cens,** see *Anthrax.* **V. germinati′va,** see *Molecule.* **V. omphalomesenter′ica,** vesicula umbilicalis. **V. ova′lis,** vesicula umbilicalis. **V. prolif′era,** see *Molecule.* **V. prostat′ica,** see *Ejaculatory ducts.* **V. sero′sa,** false amnion. **V. spermat′ica spu′ria,** see *Ejaculatory ducts.* **V. umbilica′lis,** umbilical or intestinal vesicle, vitelline pouch, vitellicle; a small, pyriform, round, or spherical sac, which, about the fifteenth or twentieth day after fecundation, is the size of a common pea, and probably acquires its greatest dimensions during the third or fourth week. After the seventh week it becomes shrivelled and disappears insensibly. It seems to be situated between the chorion and the amnion, and is commonly adherent either to the outer surface of the amnion or to the inner surface of the chorion, but at times is loose between them. The *vitelline pedicle* attaching the vesicle to the embryo is continuous with the intestinal canal, and up to twenty or thirty days of embryonic life is hollow—*ductus omphalomesentericus* or *vitello-intestinalis* or *vitellarius, vitelline duct.* Its arteries are the omphalomesenteric. The *vitelline fluid* contained in the vesicle—in the *vitelline* or *yolk membrane*—has been compared to the vitellus or yolk of a bird's egg, and, like it, is an oleaginous, albuminous substance inservient to the nutrition of the embryo.

**Vesic′ulæ** (pl. of vesicula). Vesicular skin diseases; see also *Villous membranes, Vesicle,* and *Vesicula.* **V. aë′reæ,** bronchic cellules. **V. bron′chicæ,** bronchic cellules. **V. cervi′cis u′teri,** ovula Nabothi. **V. di′væ bar′baræ,** variola confluens. **V. gingiva′rum,** aphthæ. **V. graafia′næ,** folliculi graafiani. **V. gris′eæ,** see *Spleen.* **V. malpighia′næ,** bronchic cellules. **V. membrana′ceæ,** bronchic cellules. **V. Nabo′thi,** Nabothian glands. **V. pulmona′les,** bronchic cellules. **V. rotun′dæ cervi′cis u′teri,** Nabothi glandulæ. **V. san′guinis,** blood corpuscles. **V. semina′les,** seminal vesicles. These are two small, membranous sacs serving as reservoirs for the sperm, and probably secrete a fluid to be mixed with it. They are beneath the bladder, above the rectum, behind the prostate, and to the outer side of the vasa deferentia. Their anterior extremity or neck is narrow and elongated, being continuous with the excretory duct of the vesicula. This duct joins the vas deferens, forming with it the ejaculatory duct. **V. semina′les mulie′rum,** Nabothi glandulæ. **V. spermat′icæ,** v. seminales.

**Vesic′ular** or **Vesic′ulate.** Of or belonging to a vesicle; full of or containing small vesicles or cells. The cortical or gray matter of the brain is sometimes termed vesicular. **V. breath′ing,** normal respiratory murmur heard over the lungs. **V. bronchi′tis,** lobular pneumonia, bronchopneumonia. **V. col′umn,** v. cylinder. **V. cyl′inder,** column of nerve-cells in the gray matter of the spinal cord at the base of the posterior cornu. **V. fe′ver,** pemphigus. **V. mur′mur,** sound heard over a healthy lung. **V. pneumo′nia,** lobular pneumonia. **V. râle,** crepitant râle in air-vesicles. **V. res′onance,** normal resonance noticed on percussion of the lungs. **V. respira′tion,** v. breathing. **V. sound,** a fine, breezy sound heard during inspiration, and due to dilatation of the air-cells of the lungs.

**Vesicula′tion.** Process of forming vesicles. Condition of the surface in which vesicles are present.

**Vesiculif′erous** (*vesicula+fero,* to bear). Bearing or consisting of vesicles.

**Vesic′uliform.** Having the shape of or resembling a vesicle.

**Vesiculi′tis.** Inflammation of any vesicle, but especially of the seminal vesicles.

**Vesiculocav′ernous.** Vesicular and cavernous; a term applied especially to cavernous respiration, in which the inspiration has a partly vesicular quality.

**Vesiculo′sus.** Relating to or containing vesicles.

**Vesiculotu′bular.** A quality of respiratory sound combining vesicular and tubular factors.

**Vesiculotympan′ic** or **Vesiculotympanit′ic.** An epithet for a sound or resonance heard on percussion, consisting of the vesicular and tympanitic sounds combined. It occurs when the parenchyma of the lungs is incompletely solidified.

**Vesic′ulous.** Shaped like or characterized by vesicles.

**Ves′pa.** Wasp.

**Vespa′jus.** Suppurative follicular inflammation of the hairy scalp.

**Vespertilio′nis a′la** (bat's wing). A triangular portion of the broad ligament of the uterus, formed by the ligament of the ovary and the ovary itself.

**Ves′sel.** A canal more or less elastic, formed by the superposition of membranes, designed for the transport of fluids. **Absor′bent v.,** lymphatic v. **Blood v.,** one of the blood-carrying tubes, an artery, vein, or capillary. **Chylif′erous v.,** lacteal v. **Hemorrhoid′al v.,** a varicose vein of the rectum. **Jung′bluth's v.,** see *Jungbluth.* **Lac′teal v.,** lymphatic v. conveying chyle from the intestinal canal. **Lymphat′ic v.,** one of the system of vessels conveying lymph.

**Vestib′ular.** Relating to a vestibule, usually to the v. of the ear. **V. an′gle,** external angle of the cochlear duct between the outer wall and the membrane of Reissner. **V. ar′tery,** branch of the internal auditory artery supplying the vestibule. **V. blind sac,** term applied to the end of the cochlear duct nearest to the vestibule in the internal ear. **V. glands,** glands situated in the vestibule of the vagina. **V. mem′brane,** membrane of Reissner. **V. nerve,** see *Auditory nerve.* **V. pas′sage,** scala vestibuli; passage of the cochlea proceeding to the apex from the lamina spiralis. **V. por′tion of coch′lea,** the portion situated near the vestibule.

**Ves′tibule.** The porch or entrance to a house; hence any anatomical part resembling a porch. **Aor′tic v.,** a small portion of the cavity of the left ventricle of the heart immediately below the root of the aorta. **V. of the ear,** a cavity of an irregular shape forming part of the labyrinth or internal ear The vestibule is situated on the inner side of the tympanum, on the outer side of the meatus auditorius internus, before the semicircular canals, and behind the cochlea. It is lined by a particular membrane, and contains the liquor of Cotunnius and branches of the auditory nerve. There is also another membrane, constituting the membranous vestibule, but it is not an exact imitation of the osseous cavity. It is composed of two distinct sacs opening into each other—the sacculus vestibuli, or utricle, and the sacculus. There are three contiguous cavities in the vestibule, one of which, the semioval, is situated above; another, the hemispherical, below; the third, or sulciform, being the orifice of the aquæductus vestibuli, behind. **V. of the lar'ynx,** the superior cavity of the larynx. **V. of the mouth,** space included between the teeth and cheeks and lips. **V. of the nose,** the anterior portion of the nose which is encircled by the anterior nasal cartilages. **V. of the vagi'na or vul'va,** a smooth space between the nymphæ and below the clitoris, separating the two passages—the urethra above and the vagina below.

**Vestib'ulo-ure'thral.** Relating to the bulbus vestibuli and the urethra.

**Vestib'ulum.** Vestibule. **V. labyrin'thi,** vestibule of the ear. **V. laryn'gis,** see *Vestibule*. **V. na'si,** see *Vestibule*. **V. o'ris,** see *Vestibule*. **V. os'seum,** vestibule of the ear. **V. pharyn'gis me'dium,** isthmus of the fauces. **V. vagi'næ,** vestibule. **V. ventric'uli laryn'gis,** inferior portion of the laryngeal ventricle.

**Ves'tige.** A kind of fracture of flat bones consisting of a simple incision having the mark of the instrument that caused it. The term is also applied to a part of the body which may have no evident use in man, and yet may be of use and well developed in animals. For example, the muscles of the external ear in man, the vermiform appendix, etc.

**Vestigial** (ves-tij'e-al) **fold of the pericar'dium.** Reduplication of the serous layer of the pericardium in front of the root of the left lung; it contains remnants of the left duct of Cuvier.

**Vesti'gium.** Sole; vestige. **V. fora'minis ova'lis,** ovalis fossa. **V. pe'dis,** metatarsus.

**Vestimen'tum.** Clothing.

**Vesuvin'.** Triamidoazobenzol, a brown anilin dye suitable for staining nuclei and unicellular microorganisms.

**Ve'ta.** Mountain sickness.

**Vetch.** A plant of the genus *Vicia*, ord. *Leguminosæ*. **Chick'ling v.,** Lathyrus sativus.

**Vetera'na.** Rubeola.

**Veterina'rian.** Practitioner of veterinary medicine.

**Vet'erinary.** Pertaining to beasts of burden; hence veterinary surgeon, veterinary medicine, etc. **V. anat'omy,** see *Anatomy*. **V. den'tistry, V. med'icine, V. sur'gery,** dentistry, practice of medicine, and surgery as applied to the domestic animals.

**Veter'nus.** Lethargy. See *Coma vigil*.

**Vetive'ria odora'ta.** Andropogon muricatus.

**Vetton'ica.** Betonica officinalis.

**Vet'ula.** Sacrum.

**Vet'yver.** Andropogon muricatus.

**Vi'a.** Way. **V. curan'di,** method of cure. **V. stom'achi et ven'tris,** œsophagus.

**Viabil'ity.** See *Viable*.

**Vi'able** (*vita*, life, *habilis*, able). Epithet applied to a fœtus whose organs are properly formed and so developed as to permit its continued existence. Every fœtus is not viable. Anencephali have lived ten or twelve days, yet they are not viable. The older the fœtus the more viable it is. It is a popular error that a child born at the end of eight months is less likely to live than one born at the end of seven. It may be laid down as a general rule that a fœtus born before the end of the seventh month is not viable.

**Vi'æ chylif'eræ.** Chyliferous vessels. **V. clandesti'næ,** clandestine passages, supposititious secret passages to account, for example, for the rapid transmission of substances taken into the stomach to the kidneys or bladder. **V. extraordina'riæ lac'tis,** secretion of milk elsewhere than in the breasts. **V. lacryma'les,** lacrymal passages. **Pri'mæ v.,** the series of hollow organs forming the digestive canal, from the mouth to the anus, in which the first steps in assimilation are conducted. **Secun'dæ v.,** the chyliferous vessels, the lymphatics, and the blood-vessels by which the products of digestion are distributed to the tissues and organs.

**Vi'al.** A small glass bottle; a phial.

**Vi'and.** Any kind of food, but particularly flesh foods.

**Vib'ices** (pl. of *vibex*, mark of a stripe). Large purple spots, like the marks produced by the strokes of a whip, appearing under the skin in certain malignant fevers. They are unfavorable indications, as they denote great prostration.

**Vibra'men** (*vibro*, to quiver). Oscillation.

**Vi'brans.** Vibratory.

**Vi'bratile.** Possessed of oscillation; vibrating. Capable of vibratory motion. **V. cells,** ciliated epithelium.

**Vibratil'ity.** Capability of being thrown into vibration.

**Vibra'tion.** Oscillation. Shaking of the body. **Pec'toral** or **Tac'tile v.,** pectoral fremitus. **Tus'sive v.,** see *Tussive*.

**Vi'bratives.** Term applied to certain consonants because of their mode of production.

**Vi'brator.** Vas deferens. Also mechanical contrivance for massage.

**Vi'bratory.** Vibrative. An epithet applied to the pain accompanying some neuralgiæ, seeming to the patient to vibrate among the nerves. **V. mo'tion,** see *Cilia*.

**Vib'rio.** A genus of *Schizomycetes*, motile, comma-shaped or spiral, corresponding in general to the microspira, sometimes spirillum, of Migula's classification. See *Bacteria*. **V. aquat'ilis,** Microspira aquatilis. **V. au'reus,** Spirillum aureum. **V. berolinēn'sis,** resembles V. comma. **V. chol'eræ asiat'icæ** or **V. com'ma,** Microspira comma or comma bacillus. **V. choleroi'des,** a probable variety of V. comma, but less aërobic. **V. dun'bari,** Microspira dunbari. **V. fink'leri,** Finkler-Prior bacillus. **V. flaves'cens,** Spirosoma flavescens. **V. fla'vus,** Spirosoma flavum. **V. i'vanoff,** a variety of V. comma. **V. lingua'lis,** a bacterium resembling V. comma, from scrapings of the human tongue. **V. lissabonen'sis,** a probable variety of V. proteus. **V. metchniko'vi,** Microspira or Spirillum metchnikovi. **V. pro'teus,** the Finkler-Prior bacillus, causing cholera nostros. **V. saproph'iles,** Microspira saprophiles, three varieties of which, α, β, and γ, have been isolated from sewer mud; not believed to be pathogenic. **V. schuylkillien'sis,** Microspira schuylkilliensis, a comma bacillus pathogenic to pigeons and guinea-pigs, isolated from Schuylkill River water; possibly a variety of V. metchnikovi. **V. tonsilla'ris,** Microspira tonsillaris.

**Vibris'sæ** (*vibro*, to quiver). Hairs growing at the entrance of the nostrils and of other apertures. In the feline tribe, the whiskers.

**Vibrom'eter.** Apparatus for the treatment of deafness by inducing rapid vibrations of the membrana tympani.

**Vi'brophone** (*phone*, sound). Apparatus for the treatment of deafness by sound massage of the membrana tympani.

**Vibrotherapeu'tics.** Therapeutic application of vibration.

**Vibur'nic acid.** Acid from the bark of Viburnum prunifolium, identical with valerianic acid.

**Viburnin'.** Bitter, resinous body from Viburnum prunifolium.

**Vibur'num.** A genus of plants, ord. *Caprifoliaceæ*. **V. acerifo'lium,** maple-leaved arrow wood, dockmackie; a plant used by the Indians, and afterward by the Dutch, as an external application to tumors. **V. cassinoi'des,** Ilex paraguensis. **V. denta'tum,** arrow wood, mealy tree, tily of the Indians; high, indigenous shrub of the same family as V. lentago, the bark of which has been used by the Indians as a diuretic. **V. edu'le** flourishes in the Hudson Bay territory; fruit has orange color; it is less acid, more fleshy, and more agreeable to the taste than the cranberry. **V. læviga'tum,** Ilex paraguensis. **V. lenta'go,** sweet viburnum, nanny-berry, sheep-berry; indigenous tree whose bark is antiperiodic. **V. obova'tum,** native shrub of the Southern States having antiperiodic properties. **V. op'ulus** (Ph. U. S.), cramp bark, shrub of the United States and Europe; cranberry tree or snowball; the ornamental fruit is red, acid, and has been used as a substitute for the cranberry; the bark possesses antispasmodic virtues; the official preparation is the *extrac'tum vibur'ni op'uli flu'idum;* dose, ʒj–ij (4.0–8.0). **V. prunifo'lium** (Ph. U. S.), black haw, sloe-leaved viburnum, sloe; indigenous; leaves have been used as a tea; the bark is used as a remedial agent in the nervous disorders of pregnancy and uterine diseases; the official preparation is the *extrac'tum vibur'ni pruni-fo'lii flu'idum;* dose, ʒj–ij (4.0–8.0). **Sloe'-leaved v.,** V. prunifolium. **Sweet v.,** V. lentago. **V. ti'nus,** laurestinus, ornamental shrub of Europe; seeds are purgative.

**Vica'rious.** Taking the place of another, as vicarious secretion, secretion which takes place in one part instead of another; v. hemorrhage, etc. **V. menstrua'tion,** bloody discharge from the nose, rectum, stomach, or any portion of the body, substituting menstruation.

**Vice** (*vitium*). Physical or moral fault, defect, or blemish.

**Vi'chy wa'ter.** Alkaline water from Vichy, in France. Prescribed in the treatment of gallstones, in rheumatism, in diabetes, etc.

**Vic'ia.** A genus of plants, ord. *Leguminosæ.* **V. ervil'ia,** ervum. **V. fa'ba,** common garden bean; **V. sati'va,** Lathyrus sativus. **V. vulga'ris,** V. faba.

**Vicinitrac'tus** (*vicinus,* near, *traho,* to draw). Erysipelas.

**Vicious,** vish'us. Defective, faulty. **V. u'nion,** joining of the ends of a fractured bone in such a way that deformity results.

**Vicq d'Azyr's** (vik daz-eer') **band.** See *Baillarger's layer.* **V. d'A.'s bundle,** bundle of white fibres in the optic thalamus, around the base of the anterior nucleus. **V. d'A.'s cen'tra ova'lia,** the white matter of the brain seen on horizontal section at the level of the corpus callosum. **V. d'A.'s fora'men,** foramen cæcum at the upper extremity of the median groove of the anterior surface of the medulla oblongata. **V. d'A.'s stripe,** V. d'A.'s band.

**Victo'ria blue.** Blue stain, used especially for elastic tissue. **V. re'gia,** species of water-lily, native of the region of the Amazon River, having leaves about seven feet in diameter and blossoms eighteen inches in width.

**Victoria'lis femine'a.** Gladiolus vulgaris. **V. lon'ga,** Allium victoriale. **V. rotun'da,** Gladiolus vulgaris.

**Vid'ian ar'tery.** A branch of the sphenomaxillary portion of the inferior maxillary artery accompanying the Vidian nerve, and distributed to the pharynx and Eustachian tubes. **V. canal',** pterygoid canal. **V. nerve,** pterygoid nerve.

**Vieïrin'** or **Vierin'.** Bitter principle from the bark of Remijia vellozii, of Brazil, where it is used as an antiperiodic and tonic, like quinine, in doses of gr. ij–iij (0.13–0.2).

**Vien'na paste** and **pow'der.** A mixture of equal parts of quicklime and caustic potash; the powder is moistened with alcohol to form the paste.

**Vieus'sens's an'nulus** or **an'sa subcla'via.** Small nervous loop around the subclavian artery. **V.'s cen'trum ova'le,** the appearance presented by horizontal section of the cerebral hemispheres at the level of the corpus callosum. **V.'s gan'glion,** solar plexus. **V.'s isth'mus,** annulus ovalis of the right auricle. **V.'s loop,** V.'s ansa. **V.'s ring,** annulus ovalis of the right auricle. **V.'s valve,** valvula Vieussenii. **V.'s ven'tricle,** fifth ventricle.

**Vigil,** vij'il. The condition of being awake or the act of keeping awake. **Co'ma v.,** see *Coma.*

**Vigilam'bulism.** A condition in which a person goes about performing the usual acts of a rational being, but of which he has no recollection in his normal state; and, conversely, while in this state he has no recollection of anything connected with his normal life. Dual or multiple personality.

**Vig'ilance.** Insomnia.

**Vigilan'tia.** Watchfulness; morbid want of sleep.

**Vigil'iæ nim'iæ.** Morbid loss of sleep; coma vigil.

**Vigil'ium.** Watchfulness; morbid want of sleep.

**Vig'na sinen'sis.** Plant of ord. *Leguminosæ,* native of China, where it is used as a food.

**Vignal's' cells.** Connective-tissue cells in embryonic life upon the axis-cylinders.

**Vi'go's plas'ter.** Compound mercurial plaster; used in skin diseases.

**Vig'or.** Activity, force, acme.

**Vigouroux's' sign.** In exophthalmic goitre, lessened resistance of the skin to the galvanic current.

**Villar'sia.** Genus of aquatic plants belonging to ord. *Gentianaceæ.* Certain ones of the series contain a bitter principle. **V. in'dica,** aquatic medicinal plant of India.

**Vil'late's liq'uor** or **solu'tion.** Copper sulphate, 15; zinc sulphate, 15; liq. plumbi subacetatis, 30; vinegar, 200. Employed locally in caries of bone.

**Vil'li.** Plural of villus, which see.

**Villif'erous** (*villus,* wool, *fero,* to bear). Having hairs or villi.

**Villi'tis.** Coronitis.

**Villos'ity.** Having long hairs or villi; hairy.

**Vil'lous** or **Vil'lose** (*villus,* tuft of hair). Having villi. **V. coats,** v. membranes. **V. growths,** papillomata. **V. mem'branes** are those covered with fine, delicate prolongations, papillæ or villi, or covered with fine down, causing them to feel soft and velvety. The term is, however, chiefly restricted to the former.

**Vil'lus** (tuft of hair). A minute vascular tuft or projection from a membrane. The villi of the mucous membrane of the small intestine are the points of origin of the lacteal or chyliferous vessels; each villus contains a lacteal radicle and a network of capillary blood-vessels; they are most numerous in the upper part of the small intestine. The villi of the chorion are vascular projections found on the surface of the impregnated ovum soon after its lodgment in the uterus, the function of which is to absorb nutriment for the embryo; later they form the placenta. Botanically, a villus is one of the soft, hairy filaments seen on various plants.

**Vimin'eous** (*vimen,* a twig). Having twigs or resembling long, slender twigs.

**Vin'ca.** A genus of plants, ord. *Apocynaceæ.* **V. ma'jor** and **V. mi'nor,** leaves used for astringent, antihemorrhagic, and antigalactic properties.

**Vin'cent's angi'na.** Diphtheroid (not diphtheritic) angina, caused by the bacillus of pseudodiphtheria. **V.'s sign,** Argyll-Robertson's pupil.

**Vincetox'icum.** Asclepias vincetoxicum. **V. officina'le** possesses emetic and drastic properties.

**Vinctu'ra** (*vincio,* to bind). Fascia.

**Vin'cula** (pl. of *vinculum,* a band) **accesso'ria.** Several small, tendinous fasciculi, which pass between the phalanges of the fingers and the edges of the tendons. **V. ten'dinum,** small fasciculi of fibrous connective tissue running from a tendon to its sheath. Fasciculi or bands uniting the tendons of the extensor communis digitorum on the back of the hand. Bands forming a sheath for the flexor tendons as they pass over the phalanges. Ligamenta vaginalia. **V. vasculo'sa,** vincula tendinum.

**Vin'culum** (*vincio,* to bind). Bandage, fascia. **V. cani'num,** frænum penis. **V. lin'guæ,** frænum linguæ. **V. præpu'tii,** frænum penis. **V. subfla'vum,** small tendon of yellow, elastic tissue extending between the flexor tendons and the head of the second phalanx; belongs to the ligamentum breve digiti. **V. umbilica'le,** umbilical cord.

**Vine.** Vitis vinifera. **Poi′son v.,** Rhus radicans. **Wild v.,** pareira.

**Vine′berg's opera′tion.** Vaginal suturing of the round ligaments for the correction of retrodisplacements of the uterus.

**Vin′egar** (Fr., *vin,* wine, *aigre,* sour). Acetum. There are two official vinegars in the Ph. U. S., five in the Ph. Br. See *Acetum.* **Aromat′ic v.,** a mixture of various aromatic herbs steeped in vinegar. **Es′tragon v.,** see *Artemisia dracunculus.* **V. of lead,** solution of subacetate of lead. **Marseilles′ v.,** aromatic v. **Mo′ther of v.,** mycoderma aceti. **V. plant,** Penicillium glaucum. **V. rad′ical,** acidum aceticum. **Thieves′ v.,** aromatic v. **V. of wood,** see *Acidum aceticum.*

**Vineti′na.** See *Oxyacantha galeni.*

**Vi′nic.** Relating to wine. **V. acids,** series of acids obtained by the action of acids upon alcohol.

**Vinif′erous** (*vinum,* vine, *fero,* to carry). Wine-producing.

**Vinolen′tia.** Drunkenness.

**Vi′nous.** Relating to or made of wine.

**Vi′num.** Wine. In the Ph. U. S. and Br. a class of medicated wines made with white wine as a menstruum; they are weaker in alcohol than the tinctures. The following are the vina official in the Ph. U. S. and Br.: **V. al′bum,** white wine, the pharmacopœial menstruum for all the wines; it is directed to contain not less than 10 nor more than 14 per cent. by weight of alcohol. **V. antimonia′le** (Br.) or **antimo′nii** (U. S.), contains tartar emetic 0.4 per cent., or about gr. ij–℥j; dose, ♏x–xxx (0.65–2.0); as an emetic, ʒij–iv (8.0–16.0). **V. aromat′icum,** aromatic wine, contains lavender, peppermint, wormwood, sage, rosemary, and origanum in white wine; tonic and stimulant; used externally in fomentations. **V. col′chici** (Br.) or **V. c. rad′icis** (U. S.), wine of colchicum root, 40 parts colchicum root extracted with 100 white wine; dose, ♏x–xxx (0.65–2.0). **V. c. sem′inis** (U. S.), 15 parts colchicum seed; dose, ♏xv–ʒj (1.0–4.0). **V. er′gotæ** (U. S.), contains 15 per cent. ergot; dose, ʒj–iv (4.0–16.0). **V. fer′ri** (Br.) steel wine, wine of iron, one ounce of iron wire in a pint of white wine; dose, ʒj–iv (4.0–16.0). **V. f. ama′rum** (U. S.), contains 5 per cent. iron and quinine citrate, or gr. iij (0.2) in each teaspoonful; dose, ʒj–ij (4.0–8.0). **V. f. citra′tis** (U. S. and Br.), contains 4 per cent. ferric citrate, or about gr. ij (0.13) to the teaspoonful; dose, ʒj–ij (4.0–8.0). **V. ipecacuan′hæ** (U. S. and Br.), of 10 per cent. strength; dose, ♏x–xxx (0.65–2.0), as an expectorant; ʒj–iv (4.0–16.0), as an emetic. **V. o′pii** (U. S.), Sydenham's laudanum, of 10 per cent. strength; dose, ♏v–xx (0.32–1.3). **V. quini′næ** (Br.), contains one grain of the hydrochlorate of quinine in one ounce of orange wine; dose, ℥ss–j (16.0–32.0). **V. ru′brum,** red wine; directed to contain not less than 10 nor more than 14 per cent. by weight of alcohol.

**Vi′oform.** Iodochloroxychinolin, used in surgery as a substitute for iodoform.

**Vi′ola.** Sweet violet, ord. *Violaceæ;* flowers of the sweet violet have a pleasant, peculiar odor, but scarcely any taste; they are slightly laxative. **V. cani′na,** dog violet; root of this plant is emetic and cathartic; dose, gr. xx (1.3). **V. cuculla′ta,** common native blue violet. **V. ipecacuan′ha,** see *Ipecacuanha.* **V. lu′tea,** Cheiranthus cheiri. **V. mar′tia,** viola. **V. odora′ta,** sweet violet of Europe. **V. palus′tris,** Pinguicola vulgaris. **V. peda′ta,** this indigenous violet, growing from New England to Carolina, is regarded by some as a useful demulcent in pectoral affections. **V. sylves′tris,** V. canina. **V. tri′color,** heart's-ease, pansy, pensy, johnny-jump-up, johnny-jumper; decoction of the plant has been recommended in diseases of the skin, etc.; its roots are also emetic and cathartic.

**Viola′ceous.** Violet-like; resembling violets.

**Viola′tion** (*violo,* to deflower). Rape; defloration.

**Vi′olet.** Viola. A color allied to blue; that seen in the upper extremity of the spectrum when refraction is greatest. **V. bacil′lus,** B. ianthinus. **V. blind′ness,** inability to distinguish the violet rays of light. **Dog v.,** Viola canina. **Dog's tooth v.,** Erythronium americanum. **Gen′tian v.,** an anilin dye. **Hoff′mann's v.,** anilin dye employed in microscopic examinations. **Meth′yl v.,** blue pyoctanin; anilin dye for staining bacteria; germicidal. **Sweet v.,** Viola odorata.

**Vi′olet-bloom.** Solanum dulcamara.

**Violin′.** Emeticocathartic principle of Viola tricolor and V. odorata.

**Violin′-players′ cramp.** Painful cramp or spasm of the fingers, analogous to writers' cramp.

**Vior′na.** Clematis vitalba.

**Vi′per.** Asp; adder; a venomous serpent.

**Vi′pera** (*vivus,* alive, *pario,* to bring forth). Systematic name of the viper.

**Vipera′ria** (*vipera*). Aristolochia serpentaria; scorzonera.

**Vi′pergrass.** Scorzonera.

**Viperi′na virginia′na.** Aristolochia serpentaria.

**Vi′per's dance.** Chorea.

**Vir′chow's bone cells.** Cells in lacunæ of bone. **V.'s cor′puscles,** corneal corpuscles. **V.'s crys′tals,** crystals of hæmatoidin occasionally met with in extravasated blood. **V.'s degenera′tion,** amyloid degeneration. **V.'s gland,** jugular gland, situated posterior to the point of insertion of the sternomastoid muscle on the clavicle. **V.'s granula′tions,** granulations found in the walls of the ventricles of the brain in progressive general paralysis.

**Vir′chow-Has′sall's bod′ies.** See *Hassall's bodies.*

**Vir′chow-Robin′ space.** Accidental lymph space between the outer and middle coats of the cerebral vessels, communicating with the space under the subarachnoid membrane.

**Vi′res** (pl. of *vis,* strength). Strength.

**Vires′cent.** Having a greenish color, shading into or becoming green.

**Vir′ga** (rod). Penis. **V. au′rea,** golden rod. **V. ce′rea,** bougie. **V. cer′ebri,** pineal gland.

**Vir′gate** (*virga,* rod). Long, rod-like, straight.

**Virgil′ia.** Cladastris tinctoria. **V. lu′tea,** see *Cladastris tinctoria.*

**Vir′gin.** A female who has never had sexual intercourse. Applied also to the male so circumstanced. **V. hon′ey,** that flowing from honeycomb when cut or broken, without the application of heat or pressure. Also applied to the honey of young bees before they have ever swarmed. **V. Mary this′tle,** Centaurea benedicta. **V. oil,** that flowing first from ripe pulp of the olive on expression. **V. scam′mony,** finest quality of scammony.

**Vir′ginal** (*virgo,* virgin). Relating to a virgin. **V. genera′tion,** parthenogenesis. **V. mem′brane,** hymen.

**Virgina′le claus′trum** (a virginal fence). Hymen.

**Virgin′ia cow′slip.** Mertensia virginica. **V. creep′er,** Ampelopsis quinquefolia; a vine of ord. *Vitaceæ;* indigenous; used as an ornamental vine. In medicine it has been employed as a tonic and alterative. **V. dog′wood,** Cornus florida. **V. lung′-wort,** Mertensia virginica. **V. poke,** Phytolacca decandra. **V. snake′root,** Aristolochia serpentaria. **V. stone′cross,** Penthorum sedoides; possesses astringent properties, and has been used in catarrhal troubles. **V. thyme,** Pycnanthemum linifolium.

**Virgin′ity.** Maidenhood. State of one who has never had carnal intercourse.

**Vir′gin's bow′er, com′mon.** Clematis vitalba, Clematis virginica. **V.'s bow′er, sweet-scent′ed,** Clematis flammula. **V.'s bow′er, up′right,** Clematis recta. **V.'s milk,** tincture of benjamin or of any other balsam, precipitated by the addition of water, which gives it a milky appearance; also subacetate of lead precipitated by water. It has been used as a cosmetic to remove freckles, etc.

**Vir′go.** Virgin. **V. au′rea,** Solidago virgaurea.

**Vir′gula** (dim. of *virga,* a rod). Penis.

**Virgul′tum** (*virga,* a rod). Young, slender twig, shoot, or branch.

**Vir'ide æ'ris** (green of brass). Cupri subacetas. **V. monta'num,** cuprum.

**Virides'cent** (*viridis,* green). Virescent.

**Viridiflo'rus** (*viridis,* green, *flor,* flower). Having green flowers. Used to denote Melaleuca viridiflora, Acerates viridiflora, and other species.

**Vir'idine.** An alkaloid from Veratrum viride; jervine. An oily substance obtained from coal-tar.

**Vir'ile** (*vir,* man). Relating or appertaining to man or the adult age. **V. age,** see *Age.* **V. mem'ber,** penis. **V. re'flex,** penile reflex.

**Viriles'cence.** State of the aged woman in which she assumes some characteristics of the male.

**Viril'ia** (*vir,* man). Pudibilia; male genital organs.

**Viril'ity.** Adult age. Mature manhood. See *Age.*

**Virip'otent.** Nubile; fit for a husband.

**Viro'la.** Genus of trees including various species of ord. *Myristicaceæ.* Natives of South America, grouped with the myristica by many botanical authorities. **V. sebif'era,** indigenous to Brazil and Guiana; the seeds furnish a solid oil used in making candles. The juice of the bark has been used in medicine.

**Vi'rose** or **Vi'rous** (*virus*). Possessed of noxious properties; also having a peculiar nauseous taste and odor.

**Vir'tual cau'tery.** A caustic; the opposite of actual cautery.

**Vir'tue.** Faculty.

**Vir'tus** (power). Faculty; property. **V. forma'trix,** plastic force. **V. plas'tica,** plastic force.

**Vir'ulence.** Malignancy. Intensity of action. The specific quality of any virus. See *Virus.*

**Vir'ulent** (*virus*). That which is of the nature of virus or which is caused by a virus; highly toxic.

**Vi'rus.** A Latin word signifying poison, but having, in medicine, a somewhat different acceptation. By it is understood the principle which is the agent for the transmission of infectious diseases; contagium. Virus differs from venom in the latter being a secretion natural to certain animals, while the former is the result of a morbid process. Vaccine. **An'imal v.,** bovine vaccine. **Atten'uated v.,** virus diluted in such a way as to diminish its pathogenic force without depriving it of its power as a protective against disease. **Dehu'manized v.,** vaccine lymph obtained from a heifer inoculated with virus from the human subject. **Hu'manized v.,** vaccine v. from the human subject. **Or'ganized v.,** a v. containing living microorganisms. **Unor'ganized v.,** a chemical v. or poison, such as a ptomain, a leucomain, or a poisonous proteid. **Vaccine' v.,** see *Vaccina.* **V. vita'le,** sperm.

**Vis.** Force. **V. adhæsio'nis,** force of cohesion. **V. attractio'nis,** force of attraction. **V. auc'ta,** sthenia. **V. cohæsio'nis,** force of cohesion. **V. conserva'trix,** v. medicatrix naturæ. **V. elas'tica,** elasticity. **V. essentia'lis,** plastic force. **V. expul'trix,** organic force by which, it was supposed, useless, effete materials were removed from the body. **V. formati'va,** plastic force. **V. a fron'te** (force from the front), an action exerted from before, as that of the capillaries in retarding the circulation of the blood. **V. genera'trix,** generative power. **V. imminu'ta,** asthenia. **V. iner'tiæ,** inertia. **V. in'sita,** irritability. **V. irritabilita'tis,** irritability. **V. medica'trix natu'ræ,** intrinsic healing power in a living organism by virtue of which it can repair injuries inflicted upon it or resist disease. **V. menta'lis,** mental power. **V. metabol'ica,** metabolic force. **V. mor'tua,** term to include mechanical properties of a membrane—flexibility, extensibility, elasticity, etc.—which are totally independent of the vital properties. **V. muscula'ris,** muscular power. **V. nervo'rum,** nervous power. **V. nervo'sa,** nervous power. **V. plas'tica,** plastic force. **V. reproducti'va,** plastic force. **V. a ter'go** (force from behind), an action of impulsion or propulsion, as that of the heart in the circulation of the blood. **V. vi'tæ,** vital force. **V. vita'lis,** property distinguishing living matter from dead; also irritability. **V. zo'tica,** vis vitalis.

**Visca'go be'hen.** Cucubalus behen.

**Vis'cera** (pl. of viscus). Internal organs of the body.

**Vis'cerad.** Toward the viscera.

**Vis'ceral.** Relating to the viscera. Splanchnic. **V. arches** and **clefts,** four narrow, elongated apertures in the lateral wall of the cervical portion of the embryo, separated by thickenings of the wall itself; in fishes they permanently remain during life. **V. cav'ity,** one of the two great cavities enclosed in the arrangement of the segments of the skeleton; it contains the thoracic and abdominal viscera. **V. hypochondri'asis** or **mel'ancholy,** delusion connected with the abdominal organs, as a false belief in the presence of obstruction of the bowels, etc. **V. lay'er,** that fold of a serous membrane which covers a viscus; opposed to *parietal layer.* **V. plates,** the lateral parts of the middle layer of the embryo lying beyond the chorda dorsalis, afterward uniting to form the mesial plate. **V. por'tion of the pericar'dium,** that portion of the pericardial sac which is closely attached to the heart and commencement of the great vessels at the base of the heart. **V. skel'eton,** those parts which form the hæmal arches, viz., sternum, ribs, and costal cartilages.

**Visceral'gia** (*algos,* pain). Pain in the viscera.

**Vis'ceralism.** The theory that disease originates in the viscera.

**Viscera'tion.** Exenterismus, disembowelling.

**Viscerimo'tor** or **Visceromo'tor.** Inducing motion in or carrying motor influences to any viscus.

**Visceropto'sis.** Glénard's disease.

**Visceroskel'eton.** Visceral skeleton. Splanchnoskeleton.

**Vis'cid** (*viscum,* bird-lime or bird-glue). Sticky; adhesive; used to denote semiliquid, glue-like material.

**Viscid'ity** or **Viscos'ity.** Possessing viscid properties.

**Viscin'.** A viscid, glutinous substance in mistletoe, Viscum flavescens, and other species of plants.

**Vis'coid.** Relating to or resembling bird-lime or mistletoe.

**Vis'cose.** Viscous. A glue-like material secreted or produced by the Micrococcus viscosus.

**Viscos'ity.** Viscidity.

**Vis'cous.** Gluey; sticky; viscid. **V. fermenta'tion,** see *Fermentation.* **V. metamor'phosis,** the change that occurs in an adherent mass of blood plates when they unite to form a thrombus.

**Vis'cum.** Mistletoe. A parasitic plant growing on a number of trees; ord. *Loranthaceæ.* That of the oak, viscum quercinum, has been most celebrated, but it does not differ from the others. It was at one time much used in epilepsy and other neuroses, the wood or leaves being given in powder. The berries are drastic, and when applied externally are maturative. **V. al'bum,** mistletoe, consisting of a small evergreen parasitic shrub growing in Europe on various trees. **V. capen'se,** South African parasitic shrub growing on the stems of several species of rhus and euclea. **V. flaves'cens,** yellow or yellowish mistletoe, indigenous, has been given in the same cases as Viscum album. **V. verticilla'tum,** V. flavescens.

**Vis'cus.** Any internal organ of the body, especially one of the larger abdominal organs.

**Visibil'ity.** Capability of being seen.

**Vis'ible.** Capable of being seen.

**Vis'ion** (*video,* to see). Sight. The action of seeing. The sight is one of the five senses, and the eye is its organ. By it we distinguish colors and appreciate most of the physical qualities of external objects. The eye is composed of different transparent media, whose curvatures and refractive powers are so combined as to render insensible the aberrations of sphericity and refrangibility, and to concentrate the numerous rays proceeding from more or less distant objects. These rays traverse, successively, the transparent cornea, the aqueous humor, the crystalline, and the vitreous humor, striking upon the retina, on which they impress the figure of the object whence they have proceeded; and, in order that no obscurity may arise from the reflections, which might otherwise occur, the interior of the eye is lined by a membrane—the choroid—which is itself covered internally by a dark pigment. This absorbs the light, like the dark pigment in the interior of telescopes, and thus obviates confusion. **Binoc′ular v.**, see *Binocular*. **Cen′tral v.**, when the image is formed upon the macula lutea. **V. for col′or**, chromatic visual sense. **Col′ored v.**, chromopsia. **Defec′tive** or **depraved′ v.**, dysopsia. **Dichro′mic v.**, dichromism; achromatopsia. **Direct′ v.**, perception from an image formed at the macula lutea. **Distort′ed v.**, metamorphopsia. **Doub′le v.**, diplopia. **Field of v.**, the limit of indirect vision when the visual axis is fixed upon one point. **V. for form**, acuity of vision with white light. **Half v.**, hemianopsia. **Indirect′ v.**, perception of an image formed at other points on the retina than the macula lutea. **Irides′cent v.**, chromopsia. **Man′ifold v.**, polyopsia. **Mul′tiple v.**, polyopsia. **Periph′eral v.**, perception of an image formed upon the retina peripherally, and not upon the macula lutea. **Sin′gle v.**, see *Binocular*. **Sol′id** or **stereoscop′ic v.**, appreciation by ordinary vision of the solid characteristics of bodies. **Word v.**, appreciation of the written word, the opposite to word-blindness.

**Vis′mia guianen′sis.** Hypericum guianense. **V. longifo′lia**, small tree, native of Brazil; a yellow, purgative resin is obtained from it.

**Vis′ual.** Concerning the sight or belonging to vision. **V. an′gle**, the angle formed by the crossing of two rays, proceeding from opposite points of any body, in their passage from the pupil; it is by the size of this angle that we judge, to a certain extent, of the dimensions of objects. **V. ax′is**, see *Axis*. **V. cells**, rods and cones and cells of the external nuclear layer of the retina. **V. cen′tre**, special nervous centre in the occipital lobe and angular gyrus. **V. field**, area of visible appearance of objects. **V. mem′ory**, memory of persons and things taking form in the mind's eye. **V. pur′ple**, purple pigment in the retinal rods, which loses its color under the influence of light. **V. rays**, lines of light proceeding from any object to the eye.

**Vis′ualize.** To render visible. To recall a mental image with unusual clearness.

**Vis′uo-au′ditory.** Relating to or connecting the visual and auditory centres.

**Vi′sus.** Vision. **V. ac′ris**, sharpness of vision. **V. bre′vior**, myopia. **V. colora′tus**, chromatopsia. **V. debil′itas**, asthenopia. **V. de′color**, achromatopsia. **V. defigura′tus**, metamorphopsia. **V. dimidia′tus**, hemiopia. **V. diur′nus**, nyctalopia. **V. duplica′tus**, diplopia. **V. hebetu′do**, amblyopia. **V. ju′venum**, myopia. **V. lon′gior**, presbyopia. **V. lu′cidus**, photopsia. **V. musca′rum**, metamorphopsia. **V. nebulo′sus**, nebula. **V. noctur′nus**, hemeralopia. **V. phantas′matum**, metamorphopsia. **V. reticula′tus**, perception of muscæ volitantes in the shape of fine or coarse network. **V. seni′lis**, presbyopia. **V. tri′plex**, triplopia.

**Vi′ta.** Life. **V. pro′pria**, irritability.

**Vita′ceæ.** A natural order of plants abounding in mild and warm climates, of which the most important member is the *vitis* or grapevine.

**Vi′tal** (*vita*, life). Relating or appertaining to life. **V. air**, term sometimes applied to oxygen gas. **V. capac′ity**, pulmonic or lung or breathing capacity, a term employed to designate the number of cubic inches of air which a person can forcibly expire after a full inspiration. For every inch of height—from five feet to six—eight additional cubic inches of air should be given out by a forced expiration. The quantity, however, is influenced also by weight and age. The average vital capacity for the male adult (Englishman) is 3770 (Hutchinson); the estimate for the Continent is less, about 3200 (Rosenthal); women, 2500. In middle life, at 35, the vital capacity reaches its maximum and then decreases. Between 50 and 60 years great variations occur, so that no regularity can be established (Wintrich). **V. cen′tre**, see *Centrum vitale*. **V. dynam′ics**, see *Dynamic*. **V. force**, vis vitalis. **V. func′tions**, see *Function*. **V. point**, see *Centrum vitale*. **V. prin′ciple**, vital flame; the unknown principle which in association with matter, in organized bodies, controls its manifestations and properties, and distinguishes organized matter from the inorganic. **V. prop′erties**, see *Properties*. **V. signs**, the three leading symptoms in the study of disease, the pulse, respiration, and temperature. **V. statis′tics**, medical statistics. **V. vor′tex**, life.

**Vital′ba.** Clematis vitalba.

**Vi′talism** (*vita*, life). The doctrine of the vitalist, who ascribes every function of the organism to the direct agency of a vital principle or force.

**Vi′talist.** See *Vitalism*.

**Vital′ity.** Vital principle or force. Vital action or movement. The manifestation of vital force.

**Vi′talize.** To give life to any part or body.

**Vi′tals.** Parts that are necessary for life—the heart, lungs, and nervous centres more especially.

**Vitel′lary.** Vitelline. **V. mem′brane**, zona pellucida.

**Vitellif′erous** (*vitellus*, yolk of egg, *fero*, to bear). Having or possessing a vitellus.

**Vitellin′.** A natural proteid belonging to the globulins. Principal proteid contained in yolk of egg, resembling casein.

**Vitel′line** (*vitellus*, the yolk of an egg). Vitellary. Appertaining to or resembling the vitellus or yolk. Also the yolk membrane. See *Vesicula umbilicalis*. **V. apoph′ysis**, see *V. pedicle*. **V. ar′tery**, artery in early fetal life passing from the primitive aortæ to the yolk-sac. **V. cav′ity**, latebra. **V. disk**, proligerous disk. **V. duct**, see *Vesicula umbilicalis*. **V. flu′id**, see *Vesicula umbilicalis*. **V. mem′brane**, outer membrane of the two membranes lining the ovum. **V. ped′icle**, the pedicle attaching the umbilical vesicle to the embryo; see *Vesicula umbilicalis*. **V. pouch**, vesicula umbilicalis. **V. sac**, the sac containing the yolk. **V. veins**, omphalomesenteric veins. **V. ves′sels**, see *Omphalomesenteric*.

**Vitellolu′tein.** A yellow lipochrome found in birds' eggs.

**Vitellomesenter′ic.** Omphalomesenteric.

**Vitelloru′bin.** A red lipochrome, traces of which are found in birds' eggs.

**Vitellose′.** Product of the digestion of vitellin.

**Vitel′lus.** (Ph. U. S.) Yolk of egg of *Gallus bankiva*, var. *domestica*, or hen. The official preparation is *glyceri′tum vitel′li*: dose, ʒj–ij (4.0–8.0). **V. formati′vus**, germinal yolk; formative yolk. **V. nutriti′vus**, nutritive yolk. **V. o′vi**, see *Ovum*.

**Vi′tex.** A genus of plants, ord. *Verbenaceæ*. **V. ag′nus cas′tus**, the chaste tree; the seeds, when fresh, have a fragrant smell and an acrid, aromatic taste; formerly they were celebrated as antaphrodisiacs.

**Vi′ti sal′tus.** St. Vitus's dance; chorea.

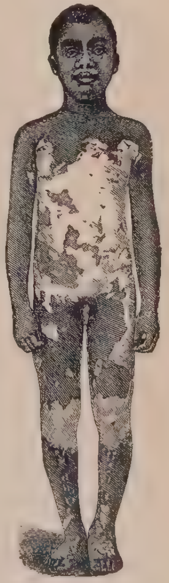
**Vitia′tion.** The corruption or contamination of anything, especially applied to air and water.

**Vitic′ula.** A trailing vine or stem.

**Vitic′ulose.** Possessing trailing vines or stems.

**Vitilig′ines** (pl. of vitiligo). Ephelides; lineæ albicantes.

**Vitili′go.** Achroma; herpes exedens; lepra; porrigo decalvans. **V. al′ba gra′vior**, lepra



Vitiligo in a negro boy.

maculosa. **V. al′ba le′vior,** v. alphos. **V. al′phos,** lepra alphoides. **V. cap′itis,** alopecia areata. **V. congenita′lis,** incomplete albinism. **V. gra′vior,** lepra. **V. hepat′ica,** chloasma hepaticum. **V. me′les,** lepra nigricans. **V. ni′gra,** lepra nigricans.

**Vit′iligoid.** Like or resembling vitiligo.

**Vitiligoi′dea** (*vitiligo+eidos,* resemblance). Xanthoma. A disease of the skin, so called from resembling the vitiligo of Willan. It appears under two forms: either as tubercles—*v. tuberosa*—varying from the size of a pinhead to that of a large pea, isolated or confluent; or as yellow patches of irregular outline, slightly elevated and with but little hardness—*v. plana.*

**Vi′tis al′ba sylves′tris.** Bryonia alba. **V. apyr′ena,** see *V. corinthiaca.* **V. cordifo′lia,** a vine-like shrub indigenous to the United States; frost grape. **V. corinthi′aca,** this is the source of the so-called dried currants. **V. idæ′a myrtil′lus,** Vaccinium myrtillus. **V. idæ′a palus′tris,** Vaccinium oxycoccos. **V. idæ′a puncta′ta,** Vaccinium vitis idæa. **V. labrus′ca,** Northern fox-grape; indigenous; by cultivation the Concord and Catawba varieties have been produced from it. **V. sati′va,** V. vinifera. **V. vinif′era,** grapevine; vine, leaves, and tendrils have an astringent taste; formerly used in diarrhœa, hemorrhage, etc.; the juice or sap, called lacryma, has been recommended in calculous disorders and in cases of chronic ophthalmia; the juice of the unripe fruit is called verjuice; the grape, when ripe, is a wholesome, delicious fruit, and when dried forms raisins. These are subacidulous, sweet, and mucilaginous, and are demulcent and nutritive. **V. vulpi′na,** Southern fox-grape, native of the Southern United States; muscadine; these grapes are large, purple, and have the odor of musk somewhat.

**Vi′tium.** Disease; defect. **V. cadu′cum,** epilepsy. **V. conformatio′nis,** a defect or fault of conformation. **V. divi′num,** epilepsy. **V. hercule′um,** epilepsy. **V. scrophulo′sum,** scrofula.

**Vitodynam′ic.** Relating to vital force.

**Vitra′ria.** Parietaria.

**Vitreocapsuli′tis.** Hyalitis.

**Vitreoden′tine.** Vitrodentine.

**Vit′reous** (*vitrum,* glass). Hyaline, glassy. **Artific′ial v.,** a glass or celluloid globule inserted after evisceration of the eye to preserve the form of the eyeball. **V. bod′y,** corpus vitreum, a transparent, gelatinous mass filling the globe of the eye posterior to the crystalline lens. **V. cham′ber,** see *Chamber.* **V. degenera′tion,** atheroma or disease of the innermost coat of arteries. **V. electric′ity,** frictional or static electricity developed by rubbing glass. **Flu′id v.,** see *Confusio.* **V. hu′mor,** corpus vitreum. **V. hu′mor of the ear,** endolymph; see *Vitrina auditoria.* **V. infiltra′tion,** small, degenerative patches on the inner layer of the choroid, impinging upon a perforating retina; on ophthalmoscopic examination they appear as minute pinkish or yellowish patches. **V. lam′ina** or **mem′brane,** internal membrane of the choroid; see *Lamina vitrea;* also a membrane in a hair follicle dividing the external root-sheath from the internal layer. **V. ta′ble of the skull,** the inner of the two bony tables of the skull.

**Vitrifac′tion** or **Vitrifica′tion** (*vitrum,* glass, *facio,* to make). The conversion of mineral materials into glass; vitrefying or changing into glass.

**Vitri′na audito′ria.** Endolymph; the fluid contained in the membranous labyrinth of the ear, so called from its resemblance to the vitreous humor of the eye; called also Scarpa's fluid or liquor. **V. ocula′ris,** fluid draining away from the vitreous body when placed upon a filter.

**Vit′riol.** Ferri sulphas. **Acid of v.,** sulphuric acid. **Blue v.,** cupri sulphas. **Elix′ir of v.,** aromatic sulphuric acid. **Green v.,** ferri sulphas. **Oil of v.,** sulphuric acid. **Ro′man v.,** cupri sulphas. **White v.,** zinci sulphas.

**Vit′riolated so′da.** Sulphate of sodium. **V. tar′tar,** sulphate of potassium.

**Vitriol′ic acid.** Sulphuric acid.

**Vitroden′tine** (*vitrum,* glass, *dens,* tooth). The superficial layer of the true dentine in fishes, taking the place of the enamel.

**Vit′rum.** Glass. **V. antimo′nii,** see *Antimonii vitrum.* **V. hypoclep′ticum,** a surgical instrument for separating the pericranium from the skull. **V. ocula′re,** see *Spectacles.*

**Vit′ta.** Bandelette; caul.

**Vitta′ria cet′erach.** Asplenium ceterach.

**Vit′tie vayr.** Andropogon muricatus.

**Vit′ular** or **Vit′ulary** (*vitulus,* calf). Relating to a calf. **V. fe′ver,** parturient apoplexy; parturient fever; a fatal disease occurring in connection with parturition in cows, characterized by tendency to congestion of the brain, apoplexy, etc.

**Vi′tus's dance.** Chorea.

**Viva′cious.** Having a lively, animated disposition; tenacious regarding life, capable of longevity; botanically, perennial.

**Viver′ra civet′ta.** See *Civetta.* **V. zibe′thi,** zibeth of Southern Asia; produces some of the civet of commerce.

**Viv′ianite.** Hydrous iron phosphate, occurring in deep blue or green crystals.

**Vivifica′tion** (*vivus,* alive, *facio,* to make). Process of giving life to matter, as in the act of assimilation accompanying digestion.

**Vivipar′ity.** State of being viviparous.

**Vivip′arous** (*vivus,* alive, *pario,* to bring forth). An epithet applied to animals whose young are brought forth alive, and not hatched from eggs previously laid, as are those of the oviparous. See *Generation.*

**Vivipa′tion.** That mode of generation in which the ovum on leaving the ovary attaches itself to the maternal organs and thus develops within the body until the time of birth.

**Vivipercep′tion.** The knowledge or study of living matter and actions without recourse to dissection.

**Vivisect′.** To perform vivisection.

**Vivisec′tion** (*vivus,* alive, *seco,* to cut). The act of opening or dissecting living animals for experimental purposes; the meaning of the word is popularly extended to embrace any experiment performed on a living animal.

**Vivisec′tionist.** One who advocates or practises vivisection.

**Vivisec′tor.** Vivisectionist.

**Vivisep′ulture.** Burying alive.

**Vi′vus** ("alive"). Living; quick in action or movement, as *argentum vivum,* quicksilver, or *calx viva,* quicklime.

**Vladi′miroff's opera′tion.** An operation for excision of the tarsus with the lower ends of the tibia and fibula. The lower ends of the tibia and fibula, astragalus, os calcis, and half of the scaphoid and cuboid bones are excised. The cut surfaces of the scaphoid and cuboid are then approximated to those of the tibia and fibula, and the wound closed. This procedure is also called Mikulicz's operation.

**Vlem′ingkx's solu′tion.** A solution of calcium sulphide made by dissolving a mixture of quicklime 2 and sublimed sulphur 3, in water 12.

**Voandze′ia subterra′nea.** A creeping herb of Africa, cultivated for its seeds and pods, which are used as food.

**Vo′cal** (*vox,* voice). Oral; relating to the voice. **V. a′rea,** portion of glottis between the vocal bands. **V. bands,** v. cords. **V. cords,** see *Cords, vocal.* **V. frem′itus,** thrill communicated to the hand when placed on the chest of a person speaking. **V. lig′aments,** v. cords. **V. mus′cle,** vocalis; inferior portion of the thyroarytenoid cartilage. **V. pro′cess,** process on the arytenoid cartilage for attachment of the vocal cord. **V. res′onance,** sound heard over the chest when the ear is applied, while the patient is speaking. **V. signs,** data obtained by an examination of the voice and vocal organs in disease. **V. tube,** see *Tube, vocal.*

**Voca′lis.** Vowel. Vocal muscle.

**Vocifera′tion.** Exercise of the voice.

**Vod′ka.** Russian whiskey distilled from rye or potatoes.

**Vogt's an′gle.** Angle included between the alveolonasal and nasobasilar lines. **V.'s point,** a spot where the trephine is to be applied in cases of traumatic intracranial hemorrhage; it is the intersection of a vertical line, passing one finger's breadth behind the ascending sphenofrontal process, and a horizontal line drawn two fingers' breadth above the zygoma.

**Voh′sen-Da′vidsohn sign.** See *Davidsohn's sign.*

**Voice** (*voco,* to call). An appreciable sound produced by the air when it is driven from the lungs, throwing the inferior ligaments of the glottis into vibration. The function by which this is effected has been called phonation. It is a function of animal life, and in other animals than man is limited to the production of the simple or instinctive voice, as it is in the idiot; but in intellectual man it becomes much more complicated and articulated. Most physiologists agree in regarding the glottis, or the space between the thyroarytenoid ligaments plus the ligaments themselves, as the part where vocal sounds are formed. The glottis and its ligaments with the vocal tube, or the space which the sound has to traverse after it is produced in the glottis, are regarded as forming a reed instrument like the clarionet, the inferior ligaments of the glottis constituting the reed. The singing voice is not limited to the larynx; the pharynx would seem to be concerned also. The notes produced in the latter have been termed supralaryngeal, or notes of the second register. They constitute the pharyngeal voice, falsetto, or faucette voice. The laryngeal voice, or voice of the first register, chest voice, is always more elevated, by an octave, in the female than in the male; it furnishes types called soprano, alto or contralto, tenor, and bass. The first two belong to the female voice; the last two to the male. The baritone is between the bass and tenor. **Amphor′ic v.,** see *Amphoric.* **Artic′ulated v.,** speech; voice produced by the glottis, modified by the motions of the tongue, lips, and other parts of the vocal tube. In speech, as ordinarily effected, the tongue, lips, teeth, etc., are concerned, but articulation is possible after the tongue has been removed. **Bleat′ing v.,** egophony. **Bron′chial v.,** see *Bronchial.* **Cav′ernous v.,** pectoriloquy. **Chest v.,** see *Voice.* **Chol′eric v.,** peculiar husky voice of those affected with cholera. **Convul′sive v.,** neurosis of the voice, consisting in the production of discordant sounds—acute and grave—which cannot be brought to the natural tones by any act of volition. It seems to be caused by disordered contraction of the muscles of the larynx. **Eu′nuchoid v.,** falsetto v. in a man. **Falset′to v.,** see *Voice.* **Goat's v.,** egophony. **Head v.,** a thin sound elicited by vibration of only part of a vocal cord. **Laryn′geal v.,** laryngophony; see *Voice.* **Pharyn′geal v.,** see *Voice.* **Tra′cheal v.,** laryngophony.

**Void.** Lacking. Empty. Vacuum. To empty, evacuate; said specifically of the contents of the bowel or bladder.

**Voigt's bound′ary lines.** Dividing lines between nerve-areas of the skin.

**Voillemier's′ point** Point on the linea alba about six centimetres below a line drawn between the two anterior superior spines of the ilium; used as a guide to suprapubic puncture of the bladder.

**Voit's nu′cleus.** Accessory nucleus of the corpus dentatum in the cerebellum.

**Vo′la.** Palm. **V. ma′nûs,** palm. **V. pe′dis,** sole.

**Vo′lar.** Relating to the palm of the hand.

**Volat′ica** (*volo,* to fly). Lichen.

**Vol′atile.** Term applied to any substance evaporating quickly. **V. al′kali,** ammonia. **V. lin′iment,** ammonia liniment. **V. oil,** volatile principle of pungent taste and smell, existing in organic and inorganic nature, found in cells or free upon the surface of various flowers and plants; see *Olea volatilea.* **V. salt,** carbonate of ammonium.

**Volatiliza′tion** (*volo,* to fly). Operation of reducing volatilizable substances into gas or vapor.

**Vol′atilize.** To change into vapor or gas.

**Vol′atilizer.** Atomizer.

**Vol′hard's solu′tion.** Decinormal solution of potassium sulphocyanate.

**Voli′tion** (*volo,* to will). The act of willing.

**Voli′tional.** Relating to volition; voluntary.

**Volk′mann's canals′.** Vascular canals of cortical layers of bone having no surrounding Haversian system. **V.'s contrac′tion** or **contrac′ture,** flexion of the fingers and sometimes of the wrist which comes on rapidly, with loss of power, after a severe injury in the region of the elbow; the deformity is due to changes in the flexor muscles, without injury to the nerves, caused in many cases by tight bandaging and the pressure of splints. **V.'s deform′ity,** congenital dislocation of the tibiotarsal articulations. **V.'s paral′ysis,** ischæmic paralysis; the anæmic condition of the muscles upon which V.'s contraction is believed to depend.

**Vol′ley.** A series of muscle twitches produced by artificial means.

**Vol′nus.** Wound.

**Volsel′la** (*vello,* to pluck). Vulsella; forceps, especially with toothed blades; tweezers for extracting hairs.

**Volt.** Unit of measurement of electromotive force. The electromotive force which applied to a conductor with a resistance of one ohm will produce a current of one ampère. **V.-ampère′,** a watt; the quantity of pressure attained by an ampère current with an electromotive force of one volt; it equals 44.2 foot-pounds per minute.

**Vol′ta's laws.** 1. The difference of potential between any two metals equals the sum of differences of potentials between intervening metals in a contact series. 2. The total electromotive force of a series of cells arranged as a galvanic battery equals the electromotive force of one cell multiplied by the number of cells.

**Volt′age.** Electric potential; measured in volts.

**Vol′tagramme.** Faradic battery specially arranged to produce an almost continuous current.

**Volta′ic.** Relating to voltaism. **V. alter′natives,** abruptly reversed galvanic currents. **V. arc,** the light at the junction of carbons in the arc light. **V. bat′tery,** the galvanic battery. **V. electric′ity,** galvanic electricity. **V. irritabil′ity,** muscular irritability to the galvanic current. **V. pile,** the primitive galvanic battery, consisting of zinc and copper plates, each pair separated by flannel moistened with strong salt solution; these were piled one upon the other; hence the name.

**Vol′taism.** Galvanism.

**Voltam′eter.** Instrument originally invented by Faraday for registering the strength of electrical currents by means of observing the degree of chemical reaction produced. Thus, the water voltameter measures the volume of hydrogen and oxygen generated by electrolysis of water, while Edison's voltameter registers the amount of copper going from anode to cathode during the activity of the current. The latter instrument has also been termed a Coulombmeter.

**Volt′ammeter.** A combined voltmeter and ampèremeter.

**Volt′meter.** The instrument for measuring the strength of the current between any two points in a voltaic circuit, the strength being registered in volts. It is simply a galvanometer of high resistance. Also termed potential galvanometer.

**Voltoli′ni's disease′.** A disease of childhood characterized by acute cerebral symptoms and followed by deafness.

**Voltoli′ni-Her′yng sign.** See *Heryng's sign.*

**Vol′tus.** Countenance; face.

**Vol′uble** (*volvo,* to roll). Botanically, a spiral twisting around anything.

**Vol′ume.** Space occupied by any substance; the cubic measurement of anything.

**Volumet′ric.** Relating to the measurement of volumes, as the volumetric method of analysis for the urine, the principle of which consists in adding to a known quantity of urine the exact amount of a test liquid required to precipitate the whole of any one ingredient contained in it.

**Vol′untary** (*voluntas,* will). Relating to the will, as voluntary muscles—muscles which act in obedience to the will and produce voluntary movements.

**Volun′tas** (*volo,* to will). Will or desire. **V. deseden′di,** desire to go to stool.

**Voluntomo′tory.** Relating to voluntary motion.

**Volup′tuous.** Relating to sensual gratification.

**Volute′** (*volvo,* to roll). Term applied to anything convoluted or rolled up.

**Vol′va.** In botany, an envelope.

**Vol′vate.** Pertaining to or possessing a volva.

**Vol′vulus** (*volvo,* to roll). Ileus. Obstruction due to a kinking or twisting of the intestine.

**Vo′mer** (ploughshare). One of the facial bones, so called from its resemblance to a ploughshare. It is an azygous bone forming the posterior part of the septum narium. It is thin, flat, and quadrilateral; articulated, below, to the superior maxillary and palatine bones; above, to the sphenoid, ethmoid, and cornets of Bertin.

**Vom′erine.** Pertaining to the vomer.

**Vomerobas′ilar canals′.** These are formed by the junction of the vomer and the sphenoid bone.

**Vom′ic** (*vomica,* boil). Purulent. **V. nut,** nux vomica.

**Vom′ica.** Term used by some authors for any encysted collection of purulent matter in the interior of a viscus. It is commonly, however, restricted to a purulent collection in the lungs, encysted or not, which may be discharged by the mouth, by breaking into the bronchial tubes. Two kinds are distinguished: one caused by the softening or breaking down of pulmonary tubercles; the other, more rare, a circumscribed abscess of the lungs. Instead of opening into the bronchia, the abscess is sometimes discharged into the pleural cavity, causing empyema. **Nux v.,** see *Nux vomica.*

**Vom′icene.** Brucine.

**Vom′icose.** Ulcerative; purulent.

**Vom′it** (*vomo,* to vomit). To throw up solids or liquids from the stomach. Matter thrown up from the stomach. **Black v.,** altered blood vomited in severe cases of yellow fever and other diseases; also employed as a synonym of yellow fever. **Dry v. of Mar′riott,** a once celebrated emetic, called dry from its having been given without solution; it consisted of equal portions of tartrate of antimony and potassium and copper sulphate. **V. nut,** nux vomica.

**Vomitine′.** Emetine.

**Vom′iting.** Act by which solids and liquids contained in the stomach are ejected by the mouth. Vomiting is the effect of some special irritation of the gastric nerves, calling, by reflex action, on the appropriate muscles to expel the contents of the stomach. It is not accompanied solely by the contraction of the stomach, as was for a long time believed. That organ, indeed, assists, but the main cause is the compression exerted upon the parietes of the stomach by the diaphragm and abdominal muscles. Vomiting is at times sympathetic, as in affections of the kidney, uterus, brain, etc.; at others symptomatic, as in gastritis. When very troublesome it may often be palliated by effervescent draughts, aromatics, sinapisms, or blisters to the epigastric region. **V. of blood,** hæmatemesis. **V. cen′tre,** a centre in the medulla to which reflex stimuli or those from direct irritation of the stomach are transmitted, causing vomiting. **V. at pleas′ure,** regurgitation. **Re′flex v.,** v. caused by irritation of any organ, pain, etc. **Stercora′ceous v.,** vomiting of fæces.

**Vomi′tio.** Vomiting. **V. san′guinis,** vomiting of blood; see *Hæmatemesis.*

**Vomi′tion.** Vomiting.

**Vomi′tium.** Vomiting.

**Vom′ito ne′gro** (Sp.). Yellow fever.

**Vomito′rium.** Emetic; vomitory.

**Vom′itory.** Drug or other agent inducing vomiting. A basin or other vessel to receive the contents of the stomach.

**Vomituri′tion.** Retching, reaching, heaving. Reversal of the action of the stomach, leading to ineffectual efforts to vomit. Some authors mean by this term a vomiting of but little matter; others, that which is effected almost without effort.

**Vom′itus.** Vomiting. **V. cruen′tus,** vomiting of blood. **V. fæculen′tus,** vomiting of fecal matter. **V. mari′nus,** seasickness. **V. matuti′nus** (in the morning), morning sickness. **V. navigan′tium,** seasickness. **V. ni′ger,** yellow fever. **V. pituito′sus,** vomiting of mucus. **V. profu′sus,** hyperemesis. **V. purulen′tus,** vomiting of purulent matter. **V. san′guinis,** vomiting of blood. **V. stercora′ceus** or **ster′coris,** vomiting of fecal matter.

**Von Grae′fe's disease′, sign,** etc. See *Graefe.*

**Vorac′ity** or **Vora′ciousness.** Greed for food. Boulimia.

**Vor′tex of the heart.** A peculiar arrangement of the superficial muscular fibres of the ventricle, consisting of a coiling inward at the apex, around which they are arranged in a whorl-like form or vortex.

**Vor′tices len′tes.** A penniform or whorled appearance presented by the peculiar arrangement of the radiated fibres of the crystalline lens.

**Vouacapou′a america′na.** Geoffrea inermis.

**Vow′el** (*vox,* voice). Physiologically, a continuous breath or sound, produced in the glottis, but more or less modified by the form of the vocal tube, through which it has to pass. In the English language *a, e, i, o, u, w,* and *y* are vowels.

**Vox.** Voice. **V. abscis′sa,** aphonia. **V. choler′ica,** the faint voice noted in the algid stage of cholera. **V. clandesti′na,** whispering. **V. clango′sa,** shrill and squalling voice, as in some affections of the larynx. **V. nasa′lis,** speaking through the nose. **V. rau′ca,** raucedo, raucous voice. **V. rauciso′na,** raucous voice.

**Voy′ra.** Genus of herbs belonging to the *Gentianaceæ,* growing in tropical America. **V. ro′sea,** species cultivated in Guiana for the roots, which are cooked and eaten like potatoes.

**Vul′canite.** Hard rubber; a compound of caoutchouc and sulphur used in the formation of plates for artificial teeth, etc.

**Vulcaniza′tion.** The formation of vulcanite by the addition of sulphur to caoutchouc.

**Vulliet's** (vue-yaze′) **opera′tion.** Retention of a floating kidney in a sling formed of a tendon of the longissimus dorsi muscle.

**Vul′nerary** (*vulnus,* wound). Relating to a wound. Traumatic. A name applied formerly to agents which were thought to favor the consolidation of wounds.

**Vul′nerating.** Wounding.

**Vul′nus.** Wound. **V. lacera′tum,** see *Laceration.* **V. sclopeta′rium** or **sclopet′icum,** gunshot wound. **V. sim′plex,** cut.

**Vul′pian's type.** Progressive muscular atrophy.

**Vul′pian-Prevost′ law.** See *Prevost's symptom.*

**Vul′pis mor′bus** (disease of the fox). Alopecia.

**Vulsel′lum for′ceps** (*vello,* to pluck). Volsella.

**Vul′tus.** Countenance; face.

**Vul′va.** Pudenda. A longitudinal opening between the projecting parts of the external organs of generation in the female, extending from the mons veneris to the perineum; called, also, fossa magna. Some anatomists mean by this term the whole of the external genital organs of the female; that is, mons veneris, labia majora, and the cleft or vestibule separating them, the clitoris, nymphæ, meatus urinarius, entrance of the vagina, with the hymen or the carunculæ myrtiformes, fossa navicularis, and fourchette. Also the uterus, especially of animals.

**V. cer′ebri,** an opening at the junction of the optic thalami in the third ventricle of the brain and immediately beneath the anterior crus of the fornix. **V. conni′vens,** condition of closed labia majora, as in the adult virgin; if they gape, as from waste of adipose tissue, the condition is called *v. hians*. **V. hi′ans,** see *V. connivens.*

**Vul′var.** Relating to the vulva. The external pudic arteries are so called because they are distributed to the vulva. **V. her′nia,** pudendal hernia.

**Vulva′ria.** Chenopodium vulvaria.

**Vulvis′mus.** Vaginismus.

**Vulvi′tis.** Inflammation of the vulva. **V. blennorrhag′ica,** profuse mucopurulent discharge from the vulva.

**Vulvo-u′terine.** Relating to the vulva and uterus. **V.-u. canal′,** vagina.

**Vulvovaginal,** vul-vo-vaj′in-al. Relating or appertaining to the vulva and vagina. **V. glands,** Cowper's glands in the female.

**Vulvovagini′tis.** Inflammation of the vulva and vagina.

# W.

**W.** Chemical symbol of tungsten or wolfranium.

**Wa′bran** or **Way′bread.** Plantago.

**Wach′endorf's mem′brane.** Membrane of the pupil of the eye of the fœtus, which undergoes atrophy about the seventh month of fetal life. Cell membrane.

**Wachs′muth's mix′ture.** Mixture of oil of turpentine 1 part and chloroform 5 parts, employed as an anæsthetic.

**Wad.** Graphites.

**Wad′dle.** To walk with a swaying motion from side to side. Also a waddling gait. One form of waddle is seen in double congenital dislocation of the hips; another in pseudohypertrophic paralysis; the latter resembles that occurring in double ankylosis of the hips.

**Wa′fer.** Thin material, bread or other, folded so as to enclose powders when swallowed. **W. ash** or **tree,** Ptelea trifoliata.

**Wag′ner's cor′puscles.** Corpuscula tactûs. **W.'s ves′icles,** germinal vesicles; see *Molecule.*

**Wagne′rian spot.** Germinal spot. See *Molecule.*

**Wag′staffe's frac′ture.** Displacement of the internal malleolus.

**Wahl's (von) sign.** Meteoric distention of the bowel above the seat of obstruction. Also a rasping or blowing sound, synchronous with the impulse of the heart, heard over an artery after its traumatic partial division.

**Wahoo′.** See *Euonymus.*

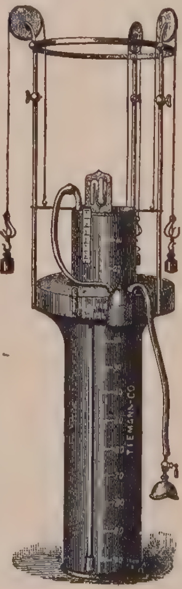
**Wair.** See *Pila marina.*

**Waist.** The part of the body between the ribs and the ilia.

**Waist′coat, strait.** A dress used for restraining maniacs or those laboring under violent delirium. It has long sleeves, which are tied behind the body, so that the arms cannot be extricated from them.

**Wake′fulness.** Insomnia.

**Wake′robin.** Arum maculatum; Trillium latifolium.



Waldenburg's apparatus.

**Wal′cher's posi′tion.** A position in which the parturient woman is placed to increase the anteroposterior diameters of the pelvic inlet, the patient lying on her back with the thighs hanging in extreme extension over the edge of the bed or table. It is resorted to, especially in difficult labor, while the head is passing the brim.

**Wal′cheren fe′ver.** Form of remittent fever at one time prevalent in Walcheren, the most western of the islands of the Netherlands.

**Wal′denburg's appara′tus.** An appliance after the plan of a gasometer, used for compressing or rarefying air; employed in the treatment of diseases of the respiratory organs.

**Wal′deyer's fos′sa.** Mesentericoparietal fossa; parajejunal fossa. **W.'s ger′minal epithe′lium,** layer of columnar cells covering the ovary. **W.'s glands,** sudoriparous glands at the attached edge of the tarsal plate. **W.'s plas′ma cell,** nucleated cell in the connective tissue about the blood-vessels. **W.'s ring,** W.'s tonsillar ring. **W.'s sul′cus,** sulcus spiralis of the cochlea. **W.'s ton′sillar ring,** circle of lymphoid structures formed in the throat by the tonsils, pharyngeal tonsil, and collections of adenoid follicles at the base of the tongue. **W.'s vas′cular lay′er,** internal layer of the ovary.

**Wale.** Wheal.

**Wal′ida.** Wrightia antidysenterica.

**Walk′er-Gor′don milk.** Modified milk; see *Milk.*

**Walk′ing.** The action by which we change place by means of a succession of steps in the same direction. In walking forward the centre of gravity is constantly altered, and a series of small, parabolic curves is described on the heads of the thigh-bones, the extent of which is regulated by volition under the guidance of vision. **W. ty′phoid,** mild form of typhoid fever, which may not require the patient to go to bed.

**Walle′rian degenera′tion.** The degeneration which nerves undergo after separation from their trophic centres. **W. law of degenera′tion,** a nerve on being separated from its trophic centre degenerates in the direction in which it normally carries impulses.

**Wall′eyed.** Applied to a horse not perfectly white or cream-colored which has a white iris. Also applied to eyes having gray or white irises or leucoma of the cornea, or to those in a state of divergent strabismus.

**Wall′flower.** Cheiranthus cheiri.

**Wall-pel′litory.** An herb, Parietaria officinalis; has diuretic and refrigerant virtues.

**Wall′pepper.** Sedum acre, common in the Eastern States.

**Wall′rue.** Asplenium ruta muraria.

**Wall′teeth.** Molar teeth.

**Wal′nut.** Juglans regia. **Black w.,** Juglans regia. **W. oil,** see *Aleurites triloba.* **W. oil, Span′ish,** see *Aleurites triloba.* **White w.,** Juglans cinerea.

**Wal′ther's an′gle.** Angle between lines drawn from the forehead to the root of the nose, and through the occipital protuberance and crista galli to intersect the first. **W.'s arterioner′vous plex′us,** cavernous plexus. **W.'s ducts,** ducts of the accessory sublingual glands. **W.'s gan′glion,** ganglion impar; coccygeal ganglion. **W.'s oblique lig′ament,** band passing from the external malleolus inwardly to the posterior part of the astragalus. **W.'s plex′us,** W.'s arterionervous plexus.

**Walthe′ria america′na.** A plant of Surinam having doubtful febrifuge properties. **W. douradin′ha,** a plant of Brazil, ord. *Sterculiaceæ,* used in diseases of the chest and in venereal affections; it is a demulcent.

**Wam′bles.** An old name for milk-sickness.

**Wampee′.** Peltandra virginica.

**Wan′dering.** Moving from place to place, not firmly or permanently attached to one spot. **W. ab′scess,** abscess that points at a distance from its own location. **W. cells,** leucocytes; see *Amœboid.* **W. kid′ney,** floating kidney. **W. liver,** see *Floating.* **W. rash,** geographical tongue.

**Wang.** The cheek. **W. teeth,** molar teeth.

**Want.** Imperious necessity which impels to the taking of food, drink, etc.

**War′bles.** Larvæ of Hypoderma bovis, found under the skin of cattle. See *Wormil.*

**War′burg's tinc′ture.** An alcoholic solution containing extract of aloes, rhubarb, angelica fruit, elecampane, saffron, fennel, gentian, zedoary, myrrh, cubeb, white agaric, camphor, quinine sulphate, and dilute alcohol. Diaphoretic and antiperiodic in pernicious malarial fevers. The original formula for W.'s t. contained a very large number of tonic, antiperiodic, and stimulant aromatic drugs; the modern formulæ are much simplified, and though they differ somewhat, all contain substantially the drugs here mentioned.

**Ward-car′riage.** An appliance used in hospitals to convey water, instruments, surgical dressings, etc., from place to place, by means of the wheels with which it is provided.

**War′drop's disease′.** Malignant onychia. **W.'s opera′tion,** distal ligature of an artery for aneurysm.

**Ward's paste.** Confection of black pepper.

**Ware.** See *Pila marina.*

**Ware′houseman's itch.** Eczema of the hands from contact with irritating substances stored in a warehouse.

**Warm-blood′ed.** Term applied to animals which have a normal uniform temperature regardless of their environment. Such animals have double circulation, pulmonic and systemic.

**Warm′ing plas′ter.** Emplastrum calefaciens.

**Warne′ria canaden′sis.** Hydrastis canadensis.

**Warp′ing.** Twisting or bending of a surface, as a dental plate, from its original form.

**War′ren's styp′tic.** A compound of alcohol and oil of turpentine, each 4 parts, and sulphuric acid 5 parts.

**War′rus, War′us, Wars,** or **Vars.** Synonyms for kamala. Also an African or Arabian drug used as a tæniacide and dye.

**Wart.** Verruca. **Cor′neous w.,** see *Cornu.* **Fig w.,** ficus. **Fil′iform w.,** w. thread-like in form. Verruca filiformis. **Flat w.,** verruca plana. **Moist w.,** reddish, moist, pointed elevation about the genitals or anus, generally due to irritative discharges or secretions in the immediate vicinity; verruca acuminata. **W. pock** or **pox,** a term sometimes employed for varicella verrucosa. **Point′ed w.,** verruca acuminata. **Post-mor′tem w.,** see *Verruca necrogenica.* **Smooth w.,** verruca glabra. **Vene′real w.,** moist w., condyloma acuminatum, verruca acuminata.

**War′thin's sign.** Increase in distinctness of the pulmonary sound in pericarditis.

**Wart′y.** Full of warts. Resembling, relating, or belonging to warts. **W. teeth,** teeth of abnormal form bearing many irregular elevations upon their crowns. **W. tu′mor of cica′trices,** tumor which sometimes appears on an old scar, many years perhaps after the injury that caused it; the ulcer formed under such circumstances has been called the *warty ulcer of Marjolin,* having been well described by that surgeon.

**Wash.** Lotion. **Black w.,** made by the addition of calomel to lime-water. **Eye w.,** collyrium. **Phageden′ic w.,** yellow w. **Red w.,** lotio rubra. **White w.,** liquor plumbi subacetatis dilutus. **Yel′low w.,** made by the addition of corrosive sublimate to lime-water.

**Washed sul′phur.** Sublimed sulphur mixed with dilute ammonia-water for two or three days, then washed with water and dried; sulphur lotum.

**Wash′erwoman's scall** or **itch.** See *Psoriasis.*

**Wash′ing so′da.** Impure sodium carbonate.

**Wash′-leather skin.** A condition observed in some diseases in which certain metals, particularly silver, produce a black line when drawn over the surface of the skin. This is said to occur in erysipelas, diseases of the kidney, phthisis, and hemiplegia, and is supposed to be dependent upon an abnormal condition of the trophic or secretory nervous mechanism.

**Was′mann's glands.** Peptic glands.

**Wasp.** Vespa. A genus of gregarious insects, like the bee and ant, armed with a sting, which pours a poisonous fluid into the puncture made by it.

**Waste.** To fall away in flesh, to emaciate.

**Wast′er.** An animal that wastes away from tuberculosis.

**Wast′ing.** Consumption; tabes. **W. pal′sy,** progressive muscular atrophy.

**Watch′fulness.** Sleeplessness or wakefulness.

**Watch′ing.** Insomnia; coma vigil.

**Watch′makers' cramp.** Spasm of the muscles of the hand in watchmakers, resembling writers' cramp.

**Wa′ter.** Protoxide of hydrogen. $H_2O$. An inodorous, tasteless, transparent fluid, consisting of a chemical union of eight parts by weight of oxygen and one of hydrogen. It freezes at 32°, boils at 212° F., and is taken as the unit in all tables of specific gravity of solid and liquid substances. Water, as we meet with it, generally contains small quantities of saline matters; at other times, as in sea water and mineral waters, it is largely impregnated. When cold, and especially when iced, it is one of the most useful refrigerants, and in the form of the cold, tepid, or warm bath it is serviceable in numerous diseases. In adding water as an ingredient in prescriptions care should be taken to mention distilled water whenever it is desirable to have the water perfectly pure, as in eye-washes. The term water is also applied to an aqueous solution of a volatile medicinal substance bearing the same relation to a solution that a spirit does to a tincture; see *Aqua,* the pharmacopœial name.

The amount of water in various parts of the human body has been tabulated as follows:

| *Substance.* | *Parts per 1000.* |
|---|---|
| Enamel | 2 |
| Epithelium | 37 |
| Teeth | 100 |
| Bones | 130 |
| Tendons | 500 |
| Cartilages | 550 |
| Skin | 575 |
| Liver | 618 |
| Muscles | 725 |
| Ligaments | 768 |
| Blood | 780 |
| Milk | 887 |
| Chyle | 904 |
| Bile | 905 |
| Urine | 933 |
| Lymph | 960 |
| Saliva | 983 |
| Gastric juice | 984 |
| Perspiration | 986 |
| Tears | 990 |
| Pulmonary vapor | 997 |

**Acid′ulous w.,** water impregnated with carbonic-acid gas. **All′flower w.,** cow's urine. **W. ap′ple,** apple tree. **W. a′rum,** Calla palustris. **W. ash,** Fraxinus sambucifolius. **W. a′vens,** Geum rivale. **W. bath,** see *Bath, water.* **W. bed,** hydrostatic bed, invented by Arnott and used for paralytics and other bedridden cases. **W. blebs,** pemphigus. **W. on the brain,** hydrocephalus. **W. brash,** pyrosis. **W. brax′y,** bloody effusion into the peritoneal cavity of sheep, with a tendency to coagulation in the circulating apparatus. **W. cal′aminth,** Mentha arvensis. **W. can′cer,** cancer aquaticus. **W. can′ker,** cancrum oris. **Car′melite w.,** a preparation made from balm or melissa. **W. on the chest,** hydrothorax. **W. clos′et,** a contrivance for the reception of human excreta, consisting of a round or oval hollow basin, into which, after use, a volume of water is poured by a mechanical arrangement, thus removing the contents into a cesspool or sewer. **W. coil,** coiled rubber or tin tubing transmitting water of desired temperature, and employed as a topical application. **Cologne′ w.,** eau de Cologne. **W. cress,** Sisymbrium nasturtium. **W. of crystalliza′tion,** the water contained in chemical combination in the crystals of various salts, and without which they could not retain their physical constitution. **W. cup,** Sarracenia purpurea. **W. cure,** hydrotherapy. **W. dill,** Antheum graveolens. **Distilled′ w.** is generally ordered in extemporaneous prescriptions. *Distilled waters* consist of common water charged by distillation with the volatile principles of medicinal agents. **W. dock,** Rumex aquaticus. **W. dress′ing,** treatment of ulcers and wounds by applications of water; it usually consists in dipping folds of lint in water and placing them on a part, the whole being covered with oiled silk, elastic gum, or spongiopiline. *Water-strapping* or *wet-strapping* means treatment of ulcers and certain cutaneous affections of the extremities, etc., with strips of linen or cotton saturated with water. **W. drop′wort,** Œnanthe crocata. **W. el′der,** see *Sambucus.* **W. far′cy,** disease of horses; lymphangitis of the leg. **W. flag,** Iris pseudacorus; Iris versicolor. **W. fright,** hydrophobia. **W. german′der,** Teucrium scordium. **W. glass,** solution of sodium silicate. **Hard w.,** common water, which decomposes and curdles soap, in contradistinction to *soft water,* which is readily miscible with soap; the hardness of water depends upon the presence in it of earthy salts, the most common of which is sulphate of calcium. **W. on the head,** hydrocephalus. **W. hem′lock,** Cicuta aquatica. **W. hore′hound,** Lycopus europæus. **Hun′gary w.,** spirit of rosemary. **W. jags,** varicella. **Javelle′ w.,** a solution of hydrochlorite of potassium. **W. knob′weed,** Polygonum amphibium. **Lead-w.,** liquor plumbi subacetatis dilutus. **W. lil′y,** Nymphea odorata. **Lime-w.,** liquor calcis. **Min′eral w.,** water holding in solution different saline and gaseous substances in sufficient quantity to be possessed of medicinal properties, or of a temperature different from that of the ordinary springs of the country. Mineral waters have been variously classified into alkaline, saline, chalybeate, sulphur, calcic, arsenic, purgative, etc. The *alkaline* contain chiefly carbonates of alkaline earths and metals; the *saline* contain chlorides or sulphates; the *chalybeate* contain notable amounts of iron; the *sulphur* waters contain sulphides in proportionally large amounts; the *calcic* contain lime salts; the *arsenic* contain more or less of some salt of arsenic; the *purgative* waters contain sulphate of magnesium (Epsom salt) or sulphate of sodium (Glauber salt) chiefly. Mineral waters are also distinguished as *thermal* (hot or warm) and *non-thermal* (cold), and as *acidulous* (containing carbonic-acid gas) or *still* (not bubbling with gas). **Ox′ygenated w.,** hydrogen peroxide. **W. pang,** pyrosis. **W. pars′nip,** Sium latifolium. **W. pep′per,** Polygonum hydropiper. **W. plan′tain,** Alisma plantago, rhizome of which has been used in various affections, while the leaves have been given internally for renal and cystic calculi, and applied externally in fomentations. **W. pox,** varicella. **W. pur′ple,** Veronica beccabunga. **W. purs′lane,** Ludingia palustris. **W. qualm,** pyrosis. **W. rad′ish,** Sisymbrium nasturtium. **W. ri′gor,** rigor induced in a muscle by the action of water in electromotor examinations. **W. sham′rock,** Menyanthes trifoliata. **W. shield,** Brasenia hydropeltis; B. peltata. **W. smart′weed,** Polygonum acre. **So′da-w.,** simple acidulous water. **Soft w.,** water containing but a small proportion of mineral matter; see *Hard water.* **W. star′nut,** Callitriche verna. **W. strap′ping,** see *W. dressing.* **W. stroke,** see *Hydrocephalus internus.* **Syd′enham's styp′tic w.,** a solution of copper sulphate, alum, and sulphuric acid in water. **Tar-w.,** see *Pinus sylvestris.* **W. tar′get,** Brasenia hydropeltis. **Toast-w.,** see *Toast-water.* **W. tomes,** an old name for pyrosis. **W. whist′ling,** metallic râle heard on auscultation in pneumothorax.

**Water-borne.** Carried by water; said of infectious diseases propagated partly or wholly by contaminated drinking water; such are typhoid fever, dysentery, and cholera.

**Water-ham′mer pulse.** See *Corrigan pulse.*

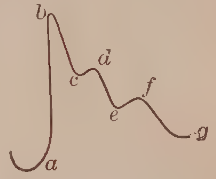
**Wa′ters.** Liquor amnii. **Bag of w.,** see *Liquor amnii.* **Bro′ken** or **discharged′ w.,** discharge or breaking of the waters at birth. **False w.,** fluid which sometimes collects between the amnion and chorion, or between the uterus and ovum, and is commonly discharged before the birth of the child or before the discharge of the liquor amnii. **First w.,** waters discharged before the extrusion of the fœtus. **Green w.,** see *Lochia.*

**Wa′tery eye.** Epiphora.

**Watt** (from James Watt, 1736–1819). Synonym for volt-ampère; unit of electrical force: 1 watt equals $\frac{1}{9.81}$ kilogrammetre, which represents $\frac{1}{746}$ horse-power.

**Wat′tle-bark.** Bark of an Australian tree, the Acacia decurrens; also applied to the bark of other Australian species of acacia. **W.-gum,** a gum obtained from Australia.

**Wave.** The progress of a succession of oscillatory movements of the particles of a gaseous, liquid, or elastic solid medium; the particles in motion do not advance with the wave, but move only a certain definite distance and then return to their original position; their movement may be in the same plane as the advance of the wave, as in the sound wave in the air, this being called a *longitudinal wave;* or it may be transverse to the line of advance, as in the light or heat wave in the ether—a *transverse wave;* or it may be perpendicular to the line of movement, as in the waves of the sea. Also one of a series of elevations and depressions on the surface of a liquid. One of a series of undulations in a curved line or of ridges on the uneven surface of a solid body. The ascending and descending lines of the sphygmogram, and also the minor breaks (secondary waves or wavelets) in these lines, are called waves. **Anacrot′ic w.,** a notch or secondary wave sometimes seen in the ascending line of the sphygmogram. **Catacrot′ic w.,** the secondary waves interrupting the line of descent in the sphygmogram. **Dicrot′ic w.,** the second of the catacrotic waves due to the closure of the semilunar valves. **Elastic′ity w.,** any one of the catacrotic waves except the dicrotic, caused by the elastic recoil of the arterial wall. **Erb's w.,** see *Erb.* **W. length,** the distance between similar points in two successive waves. **Percus′sion w.,** the apex of the pulse wave as shown in the sphygmogram. **Predicrot′ic w.,** tidal wave. **Postdicrot′ic w.,** a third notch or secondary wave sometimes seen in the descending line of the sphygmogram, due to the elastic recoil of the wall of the artery. **Pulse w.,** the progressive expansion of the arteries caused by the passage of the blood expelled from the left ventricle with each recurring systole. **W. record′er,** kymograph; sphygmograph. **Sec′ondary w.,** catacrotic wave. **Systol′ic w.,** percussion wave. **Ti′dal w.,** the first of the catacrotic waves, due to the elastic recoil of the wall of the artery.



Waves in the sphygmographic tracing: *a b,* percussion upstroke; *a b c,* percussion-wave; *c d e,* tidal wave; *e f g,* dicrotic wave; *d e f,* aortic notch; *f g,* diastolic period.

**Wave′let.** A small wave; term applied to the catacrotic waves in the sphygmogram.

**Wa′vellite** (after Dr. Wm. Wavell). Hydrated phosphate of aluminum.

**Wa′vy.** Undulating; undulatory. **W. respira′tion,** cogwheel respiration.

**Wax.** Cera. **Carnau′ba w.,** wax from the leaf-covering of the Brazilian palm, Copernicia cerifera. **Ear w.,** cerumen. **Japan′ w.,** from Rhus succedanea, of Japan. It is of a medium quality between beeswax and the ordinary vegetable tallows. **W. ker′nels,** enlarged glands are popularly so called. **Myr′tle w.,** bayberry tallow; a wax from the fruit of Myrica cerifera, wax myrtle, candleberry myrtle; indigenous plant which yields the bayberry bark; tonic, stimulant, and astringent, and prescribed in dysentery. **Veg′etable w.,** see *Cera flava.* **White w.,** cera alba. **Yel′low w.,** cera flava.

**Waxed sponge.** Sponge impregnated with wax and then compressed; used in surgery.

**Wax'ing.** The operation of contouring the temporary wax base of an artificial denture. Growing; increasing in size. **W. ker'nels,** waxen kernels; a popular term for small tumors formed by the enlargement of the lymphatic glands—in the groins of children particularly; they have been looked upon as connected with the growth of the body, hence their name.

**Wax-work.** Celastrus scandens.

**Wax'y degenera'tion, W. liv'er, W. spleen.** See *Lardaceous.*

**Way.** Canal.

**Way'bread.** Plantago major.

**Ways, diges'tive.** See *Viæ, primæ.*

**Weak.** Physically debilitated. Infirm. **W. of mind,** mentally defective.

**Weak'ness.** Debility. **In'ward w.,** a popular term for leucorrhœa or uterine trouble. **Spi'nal w.,** see *Spinal.*

**Weak-sight'edness.** Asthenopia.

**Wean'ing.** Act of depriving the infant permanently of the breast milk, in order to feed it on other and more solid nourishment. **W. brash,** see *Brash.*

**Wear'ing.** Consumption.

**Weas'and.** Trachea.

**Weath'ercocks.** Impatiens.

**Weav'er's bot'tom.** Chronic inflammation of a bursa over the tuberosity of the ischium, due to pressure on the part.

**Web.** Caligo; pterygium. **Mus'cular w.,** panniculus carnosus.

**Webbed fin'gers** or **toes.** Union of the fingers or toes with each other, usually congenital, but sometimes the result of burns, ulcerations, etc. **W. pe'nis,** penis palmatus.

**We'ber.** Ampère. See *Unit.*

**We'ber's cor'puscle.** Sinus pocularis. **W.'s exper'iment,** the vibrations of a tuning-fork placed upon the vertex are heard better when the ear is closed. **W.'s glands,** mucus-secreting glands of the tongue. **W.'s law,** a law proposed first by Heinrich Weber, professor of anatomy and physiology at Leipsic, and subsequently extended and elaborated by Fechner. This law is that the intensity of a sensation varies in a constant ratio with the logarithm of the stimulus producing the sensation. **W.'s orbic'ular zone,** part of the iliofemoral ligament forming a loop around the neck of the thigh-bone. **W.'s or'gan,** sinus pocularis of the male urethra. **W.'s par'adox,** when a muscle is overloaded, so that contraction is impossible, it may elongate. **W.'s su'ture,** delicate suture on the internal surface of the nasal process of the superior maxillary bone. **W.'s symp'tom,** paralysis of the motor oculi nerve on the side in which the lesion has occurred, and of the facial and hypoglossal nerves and the arm on the other side; the symptom would imply the existence of a lesion in the region of the peduncle and the pons Varolii. **W.'s syn'drome,** W.'s symptom. **W.'s test,** a test for deafness, a tuning-fork being placed on the vertex, or the space between the eyes, or the teeth; if the deafness is due to disease of the auditory nerve, it is heard better on the non-affected side; if the deafness is caused by obstruction to the conduction of sound, it is heard more distinctly on the affected side; also a test for finding the smallest distance that the points of a pair of compasses can be approximated to make two distinct impressions on the skin as separate bodies. **W.'s ves'icle,** sinus pocularis of the male urethra.

**Web-eye.** Caligo; pterygium.

**Web'ster's conden'ser.** Appliance furnished with a lower convex lens and an upper achromatic lens, for the purpose of condensing light on microscopic specimens.

**Wedge, den'tal.** Instrument to separate adjoining teeth.

**Wedged.** The head of the fœtus is said to be wedged, locked, or impacted in the pelvis when it remains fixed, notwithstanding the uterine efforts.

**Wedl's vesic'ular cells.** Large cells in the crystalline lens, seen in cases of diabetic and senile cataract more particularly.

**Weed.** See *Mastitis* and *Ephemera, puerperal.* **Ar'row w.,** Sagittaria variabilis. **Bee'tle w.,** Galax aphylla. **Breast w.,** Saururus cernuus. **W. in the breast,** see *Mastitis.* **But'ter w.,** Erigeron canadense. **Can'cer w.,** Goodyera pubescens. **Dy'er's w.,** Reseda luteola. **Field w.,** Anthemis cotula. **Horse w.,** Erigeron canadense. **Horse'fly w.,** Sophora tinctoria. **Milk w.,** Apocynum androsæmifolium. **Phthi'sis w.,** Ludwigia palustris. **Pride w.,** Erigeron canadense. **Red w.,** Phytolacca decandra. **Sil'ver w.,** Potentilla anserina. **Sol'dier's w.,** matico. **Thim'ble w.,** Rudbeckia laciniata. **Wind w.,** Asclepias tuberosa.

**Weeks's bacil'lus.** Koch-Weeks bacillus of acute conjunctivitis.

**Weep'ing.** Lacrymation or excretion and effusion of tears. **W. ec'zema,** moist eczema. **W. sin'ew,** a cystic tumor on the sheath of a tendon; also a torn or broken tendon.

**Wee'sel.** Trachea.

**Weg'ner's disease' of bone.** Congenital hereditary syphilitic disease, being an inflammation of the epiphyseal bone and cartilage. **W.'s sign,** in syphilis of the fœtus, the dividing line between the epiphysis and the shaft of long bones is broad and irregular.

**Weich'selbaum's diplococ'cus.** Diplococcus intracellularis meningitidis.

**Wei'del's reac'tion.** Murexide test for uric acid.

**Weige'la.** Genus of shrubs belonging to the *Caprifoliaceæ,* growing in Japan and China; cultivated for the sake of ornamentation.

**Wei'gert's meth'od.** Method of coloring nerve-fibres with hæmatoxylin; also substitution of anilin oil for alcohol in dehydrating and decolorizing. See *Gram's method.*

**Weight.** The force of attraction of a body toward the earth's centre. A sensation of heaviness or pressure over the whole body or over a part—the stomach or head, for example. **W. of the bod'y** or **or'gans,** the average weight of the body has been estimated (Vierordt) at 65 kilogrammes in men (143 lbs.); in women about 55 kilogrammes (121 lbs.). The weight of the body of newborn children, on an average, in middle Europe, is as follows: general average, 3250 g.—boys, 3333 g.; girls, 3200 g.; a twin weighs, on an average, 2501 g., the average weight of a male twin being 2554 g., of a female twin, 2425 g. The average weight of each organ in the adult is, according to Quain, as follows:

| | | |
|---|---|---|
| Heart, male | 11 | ounces. |
| " female | 9 | " |
| Brain, male | 49½ | " |
| " female | 44 | " |
| Spinal cord | 1 to 1¾ | " |
| Liver | 50 to 60 | " |
| Pancreas | 2¼ to 3½ | " |
| Spleen | 5 to 7 | " |
| Lungs, male | 45 | " |
| " female | 32 | " |
| Thyroid cartilage | 1 to 2 | " |
| Thymus (at birth) | ½ | " |
| Kidney | 4½ | " |
| Suprarenal capsules | 2 drachms. | |
| Prostate | 6 " | |
| Testes | ¾ to 1 ounce. | |
| Unimpregnated uterus | 7 to 12 drachms. | |

Detailed estimates of the weights and measurements of the various organs are also given under each organ. See also *Man.*

**Weights and Meas'ures.** The importance of possessing a uniform system of weights and measures is universally recognized, and it is probable that the decimal or metric system will finally be adopted by all countries. It is now used by scientists generally and is also employed in the pharmacopœias, but its use is not yet obligatory in Great Britain and the British colonies nor in the United States.

### WEIGHTS (United States).

#### *Troy Weight.*

The weights employed by physicians and apothecaries in the United States in prescribing and dispensing medicines are those derived from the troy pound. The scale is as follows:

One Pound, ℔ = 12 Ounces = 5760 Grains.
One Ounce, ℥ = 8 Drachms 480 "
One Drachm, ʒ = 3 Scruples = 60 "
One Scruple, ℈ = 20 "
One Grain, gr. = 1 "

This table may be differently stated as follows:

| *Lb.* | | *Oz.* | | *Drachms.* | | *Scrup.* | | *Grs.* |
|---|---|---|---|---|---|---|---|---|
| 1 | = | 12 | = | 96 | = | 288 | = | 5760 |
| | | 1 | = | 8 | = | 24 | = | 480 |
| | | | | 1 | = | 3 | = | 60 |
| | | | | | | 1 | = | 20 |

### MEASURES OF CAPACITY (United States).

One Gallon (Congius), C. = 8 Pints = 61,440 M. = 231 cu. in.
One Pint (Octarius), O. = 16 Fluidounces = 7,680 M. = 28.875 "
One Fluidounce, f℥ = 8 Fluidrachms = 480 M. = 1.8047 "
One Fluidrachm, fʒ = 60 M. = .2256. "
One Minim, ♏

The following are the weights and measures used by apothecaries in Great Britain, with their symbols:

### WEIGHTS (Great Britain).

#### *Avoirdupois Weight.*

| *Pound.* | | *Ounces.* | | *Drachms.* | | *Troy grains.* |
|---|---|---|---|---|---|---|
| 1 | = | 16 | = | 256 | = | 7000 |
| | | 1 | = | 16 | = | 437.5 |
| | | | | 1 | = | 27.34375 |

#### *Relative Value of Troy and Avoirdupois Weights.*

1 pound troy = 0.822857 avoirdupois or 0 ℔ 13 oz. 72.5 gr.
1 avoirdupois = 1.215277 troy or 1 ℔ 2 oz. 280 gr.

The pound of 7680 grains avoirdupois = 7000 grains troy, and hence 1 grain troy = 0.97 grain avoirdupois.

### IMPERIAL MEASURES OF CAPACITY (Great Britain).

1 Gallon, C. = 8 Pints = 160 Fluidounces = 1280 Fluidrachms = 76,800 Minims.

1 Pint, O. = 20 Fluidounces = 160 Fluidrachms = 9600 Minims.

1 Fluidounce, fl. oz. = 8 Fluidrachms = 480 Minims.
1 Fluidrachm, fl. dr. = 60 Minims.
1 Minim, ♏.

### MEASURES OF LENGTH (Great Britain).

1 Line = $\frac{1}{12}$ inch.
1 Inch = $\frac{0.1}{39.1393}$ seconds pendulum.
12 Inches = 1 foot.
36 " = 3 feet = 1 yard.
Length of pendulum vibrating seconds of mean time in the latitude of London, in a vacuum at the level of the sea . . . . } 39.1393 inches.

### RELATION OF MEASURE TO WEIGHTS (Great Britain).

| | *Grs. of water.* |
|---|---|
| 1 Minim is the measure of . . . . . . . . . . . | 0.91 |
| 1 Fluidrachm is the measure of . . . . . . . . . | 54.68 |
| 1 Fluidounce " " | 1 oz. or 437.5 |
| 1 Pint " " | 1.25 ℔s. or 8750 |
| 1 Gallon " " | 10 ℔s. or 70,000 |

The measures in the United States have the same names as those in Great Britain, but their value is different, the pint weighing 16 oz. 291.2 grs. avoirdupois, and the fluidounce 455.7 grs. In medical formulæ the acids and the oils were formerly ordered by weight; other liquids by measure. In Continental Europe all medicines are weighed, and the gramme is universally used.

### POIDS DE MARC.

The *poids de marc* is that employed by the French *pharmaciens* before the metric system was adopted:

| | | |
|---|---|---|
| One Pound | contains | 16 Ounces. |
| One Ounce | | 8 Drachms. |
| One Drachm | | 3 Scruples. |
| One Scruple | | 24 Grains. |
| One Grain | | |

(For the relative values of the old French and English weights, see p. 1196.)

### WEIGHTS AND MEASURES OF THE METRIC SYSTEM.

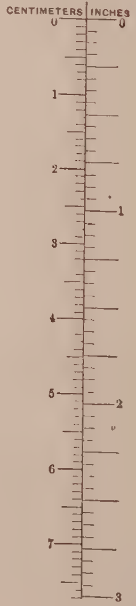
The metric system of weights and measures is decimal and founded on the metre, which is the *unit of length*, based on the measurement of the quadrant of a meridian of the earth. The *unit of surface* is the *are*, which is the square of 10 metres. The *unit of capacity* is the *litre*, the cube of $\frac{1}{10}$ of a metre. The *unit of weight* is the *gramme*, the weight of distilled water, of maximum density, which fills a cube of $\frac{1}{100}$ of a metre, called one cubic centimetre. Multiples of each of these are expressed by *deka* or *deca*, ten, as decagramme; *hecto*, a hundred, as hectolitre; *kilo*, a thousand, as kilometre, etc. Fractional quantities are denoted by *deci*, one-tenth, as decigramme; *centi*, one-hundredth, as centimetre; *milli*, one-thousandth, as millilitre, etc.

### MEASURES OF LENGTH (Metric System).

One Myriametre = 10,000 Metres.
One Kilometre = 1,000 Metres.
One Hectometre = 100 Metres.
One Decametre = 10 Metres.
One Metre = The ten-millionth part of a quarter of the meridian of the earth.
One Decimetre = The tenth part of one Metre, or 0.1 Metre.
One Centimetre = The hundredth part of one Metre, or 0.01 Metre.
One Millimetre = The thousandth part of one Metre, or 0.001 Metre.

The value of these measures may be expressed in the ordinary scale of measures in use in the United States and England, as follows:

| | *English inches.* | | *yd.* | *ft.* | *inch.* |
|---|---|---|---|---|---|
| Myriametre | 393710. | = | 10936. | 1. | 2. |
| Kilometre | 39371· | = | 1093. | 1. | 10. |
| Hectometre | 3937.1 | = | 109. | 1. | 1. |
| Decametre | 393.71 | = | 10. | 2. | 9.7 |
| Metre | 39.371 | = | 1. | 0. | 3.37 |
| Decimetre | 3.937 | | | | |
| Centimetre | 0.393 | | | | |
| Millimetre | 0.039 | | | | |



Comparative scale of inches and centimetres.

For microscopic measurements the unit is the thousandth part of a millimetre, called a micromillimetre, or micron, or mikron, the sign for which is the Greek letter $\mu$; it is practically equivalent to $\frac{1}{25000}$ inch.

## Weights (Metric System).

One Myriagramme = 10,000 Grammes.
One Kilogramme = 1,000 Grammes.
One Hectogramme = 100 Grammes.
One Decagramme = 10 Grammes.
One Gramme = The weight of a cubic Centimetre of water at 4° C.
One Decigramme = The tenth part of one Gramme, or 0.1 Gramme.
One Centigramme = The hundredth part of one Gramme, or 0.01 Gramme.
One Milligramme = The thousandth part of one Gramme, or 0.001 Gramme.

The value of these weights may be expressed in the troy scale, as follows:

| | | *Troy grains.* | | *lb.* | *oz.* | *dr.* | *gr.* |
|---|---|---|---|---|---|---|---|
| Myriagramme | = | 154340.2344 | = | 26 | 9 | 6 | 0 |
| Kilogramme | = | 15434.0234 | = | 2 | 8 | 1 | 24 |
| Hectogramme | = | 1543.4023 | = | 0 | 3 | 1 | 44.4 |
| Decagramme | = | 154.3402 | = | 0 | 0 | 2 | 34.4 |
| Gramme | = | 15.4340 | | | | | |
| Decigramme | = | 1.5434 | | | | | |
| Centigramme | = | .1543 | | | | | |
| Milligramme | = | .0154 | | | | | |

## Measures of Capacity (Metric System).

One Myrialitre = 10 cubic Metres, or the measure of 10 Milliers of water.
One Kilolitre = 1 cubic Metre, or the measure of 1 Millier of water.
One Hectolitre = 100 cubic Decimetres, or the measure of 1 Quintal of water.
One Decalitre = 10 cubic Decimetres, or the measure of 1 Myriagramme of water.
One Litre = 1 cubic Decimetre, or the measure of 1 Kilogramme of water.
One Decilitre = 100 cubic Centimetres, or the measure of 1 Hectogramme of water.
One Centilitre = 10 cubic Centimetres, or the measure of 1 Decagramme of water.
One Millilitre = 1 cubic Centimetre, or the measure of 1 Gramme of water.

The following tables, from the United States Pharmacopœia and British Pharmacopœia, give an accurate view of the relations between the weights and measures in use in those countries and those of the metric system, to which are added many items of statistical interest in connection with this subject:

## Relation of Fluid Measures to Cubic Measure.

One Gallon = 231.0 Cubic Inches.
One Pint = 28.875 Cubic Inches.
One Fluidounce = 1.80468 Cubic Inches.
One Fluidrachm = 0.22558 Cubic Inch.
One Minim = 0.00375 Cubic Inch.

## Relation of Troy Weights to Metrical.

*Fractions of a grain in Milligrammes.*

| Grains. | | Milligrammes. |
|---|---|---|
| $\frac{1}{64}$ | = | 1.012 |
| $\frac{1}{60}$ | = | 1.079 |
| $\frac{1}{50}$ | = | 1.295 |
| $\frac{1}{48}$ | = | 1.349 |
| $\frac{1}{40}$ | = | 1.619 |
| $\frac{1}{36}$ | = | 1.799 |
| $\frac{1}{30}$ | = | 2.159 |
| $\frac{1}{25}$ | = | 2.591 |
| $\frac{1}{24}$ | = | 2.699 |
| $\frac{1}{20}$ | = | 3.239 |
| $\frac{1}{16}$ | = | 4.049 |
| $\frac{1}{15}$ | = | 4.319 |
| $\frac{1}{12}$ | = | 5.399 |
| $\frac{1}{10}$ | = | 6.479 |
| $\frac{1}{8}$ | = | 8.098 |
| $\frac{1}{6}$ | = | 10.798 |
| $\frac{1}{5}$ | = | 12.958 |
| $\frac{1}{4}$ | = | 16.197 |
| $\frac{1}{3}$ | = | 21.597 |
| $\frac{1}{2}$ | = | 32.395 |

*Grains in equivalent metrical weights.*

| Grains. | | Centigrammes. |
|---|---|---|
| 1 | = | 6.479 |
| | | Decigrammes. |
| 2 | = | 1.295 |
| 3 | = | 1.943 |
| 4 | = | 2.591 |
| 5 | = | 3.239 |
| 6 | = | 3.887 |
| 7 | = | 4.535 |
| 8 | = | 5.183 |
| 9 | = | 5.831 |
| 10 | = | 6.479 |
| 12 | = | 7.775 |

| One Minim | | | = | 0.9493 |

## Relation of United States Measures to Metrical.

One Gallon = 3.785 Litres.
One Pint = 4.732 Decilitres.
One Fluidounce = 2.957 Centilitres.
One Fluidrachm = 3.697 Millilitres.
One Minim = 0.061 Millilitre.

### RELATION OF METRICAL TO UNITED STATES MEASURES.

One Myrialitre = 2641.9 Gallons.
One Kilolitre = 264.19 Gallons.
One Hectolitre = 26.419 Gallons.
One Decalitre = 2.641 Gallons.
One Litre = 2.113 Pints.
One Decilitre = 3.381 Fluidounces.
One Centilitre = 2.705 Fluidrachms.
One Millilitre = 16.231 Minims.

(For the value of metrical measures in cubic inches and wine measures, see below.)

### RELATION OF BRITISH TO METRICAL WEIGHTS.

1 Pound = 453.5925 Grammes.
1 Ounce = 28.3495 "
1 Grain = 0.0648 "

### RELATION OF BRITISH MEASURES OF CAPACITY TO METRICAL MEASURES.

1 Gallon = 4.543487 Litres.
1 Pint = 0.567936 " or 567.936 Cubic centim.
1 Fluidounce = 0.028396 " " 28.396 " "
1 Fluidrachm = 0.003549 " " 3.549 " "
1 Minim = 0.000059 " " 0.059 " "

### RELATION OF METRICAL WEIGHTS TO BRITISH.

1 Milligramme = 0.015432 Grains.
1 Centigramme = 0.15432 "
1 Decigramme = 1.5432 "
1 Gramme = 15.432 "
1 Kilogramme = 2 lbs. 3 oz. 119.8 grs., or 15432.348 grs.

### RELATION OF METRICAL MEASURES TO BRITISH.

1 Millimetre = 0.03937 Inches.
1 Centimetre = 0.39371 "
1 Decimetre = 3.93708 "
1 Metre = 39.37079 " or 1 yard 3.37 inches.
1 Cubic centimetre = 15.432 grain-measures.
1 Litre = 1 pint 15 ozs. 2 drs. 11 m., or 15432.348 grain-measures.

### RELATIVE VALUE OF THE OLD FRENCH AND ENGLISH WEIGHTS.

| *Poids de Marc.* | *Marcs.* | *Onces.* | *Gros or Dragmes.* | *Scrupules.* | *Grains.* | Equivalent in Troy *Grains.* | Equivalent in French Metrical *Grammes.* | Equivalent in Avoirdupois wt. | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | | *lb.* | *oz.* | *gr.* |
| 1 | = 2 | = 16 | = 128 | = 384 | = 9216 | = 7561 | = 489.500 | = 1 | 1½ | 61 |
| | 1 | = 8 | = 64 | = 192 | = 4608 | = 3780.500 | = 244.750 | = | 8¾ | 30 |
| | | 1 | = 8 | = 24 | = 576 | = 472.562 | = 30.594 | = | 1 | 45 |
| | | | 1 | = 3 | = 72 | = 59.070 | = 3.824 | = | | 60.284 |
| | | | | 1 | = 24 | = 19.687 | = 1.274 | = | | 20.1 |
| | | | | | 1 | = .8203 | = .0531 | = | | 0.837 |

The old French grain being thus shown to be equal to 0.8203 troy grain, one troy grain equals 1.2189 old French grain.

| *Poids de Marc.* | | *Troy wt.* | | *Avoird.* |

To convert French grains into Troy, divide by . . . 1.2189
" Troy grains into French, multiply by . . 1.2189
" French ounces into Troy, divide by . . . 1.015734
" Troy ounces into French, multiply by . 1.015734
" French pounds (*poids de marc*) into Troy, multiply by . . . . . . . . . . . . . 1.31268
" Troy pounds into French, divide by . . 1.31268

The *French medicinal pound* (*livre médicinale*) of the same scale has a value of three-fourths of the *poid de marc*, or 6612 French grains, equivalent to 5670.5 troy grains. The *poids de marc* was in use prior to the Revolution of 1789, and was succeeded by the decimal system. In 1812 the old pound was made equal to half a kilogramme—500 grains—and this was taken as the unit. The French grain then became equivalent to 0.8365 troy grain or 0.0542 gramme. This modification was not made absolute until 1827, but so much confusion resulted that the decimal system was in 1837 made obligatory.

### MEASURES OF CAPACITY.

The measures of capacity used in the United States and Great Britain have been already given. The following tables give the relative values of the measures of capacity employed in different countries and also of different measures of capacity in the same country—the wine and imperial gallons, for example:

*Proportions of the Apothecaries' and Wine Gallon.*

| *Gal.* | *Pints.* | *Fluidoz.* | *Fluidr.* | *Minims.* | *Cub. Inches.* |
|---|---|---|---|---|---|
| 1 | = 8 | = 128 | = 1024 | = 61440 | = 231 |
| | 1 | = 16 | = 128 | = 7680 | = 28.875 |
| | | 1 | = 8 | = 480 | = 1.8047 |
| | | | 1 | = 60 | = .2256 |

*Imperial Measure adopted by the London College in their Pharmacopœia of 1836.*

| *Gallon.* | *Pints.* | *Fluidounces.* | *Fluidr.* | *Minims.* |
|---|---|---|---|---|
| 1 | = 8 | = 160 | = 1280 | = 76800 |
| | 1 | = 20 | = 160 | = 9600 |
| | | 1 | = 8 | = 480 |
| | | | 1 | = 60 |

| 1 Litre | = | 1000 | or | 2 | 0 | 3 | 36 |

### MEASURES OF LENGTH.

| 1 line, the 12th part of an inch. | *Inches.* |
|---|---|
| 3 barleycorns | 1.000 |
| A palm or hand's breadth (Scripture measure) | 3.648 |
| A hand (horse measure) | 4.000 |
| A span (Scripture measure) | 10.944 |
| A foot | 12.000 |
| A cubit (Scripture measure for common purposes) | 18.000 |
| A cubit (Scripture measure for sacred purposes) | 21.888 |
| A Flemish ell | 27.000 |
| A yard | 3 ft. 00 |
| An English ell | 3 " 09 |
| A fathom or toise | 6 " 00 |

### VALUES OF THE GRECIAN, ROMAN, AND ARABIAN WEIGHTS AND MEASURES IN POIDS DE MARC.

#### 1. *Weights of the Ancient Greeks.*

| | *lbs.* | *oz.* | *dr.* | *gr.* |
|---|---|---|---|---|
| The talent | 54 | 2 | 5 | 24 |
| The mna | | 14 | 3 | 40 |
| The drachm | | | 1 | 11 |
| The obolus | | | | 13 |
| The ceration | | | | 4 |
| The chalcus | | | | 2 |
| The septon | | | | ⅓ |

#### 2. *Weights of the Ancient Romans.*

| | *oz.* | *dr.* | *gr.* |
|---|---|---|---|
| The pound (libra) | 10 | 6 | 48 |
| The ounce (uncia) | | 7 | 16 |
| The duella | | 2 | 29 |
| The sicilicus | | 1 | 58 |
| The sextula | | 1 | 14 |
| The consular denier, denarius | | 1 | 2 |
| The imperial denier or drachm, drachma | | | 65 |
| The victoriatus | | | 37 |
| The scriptulum or scruple | | | 21 |
| The obolus | | | 11 |
| The siliqua | | | 4 |

The Greeks divided their obolus into *chalci* and *lepta;* some divided it into 6 chalci, and each chalcus into 7 lepta; others into 8 chalci, and every chalcus into 8 lepta or *minuta.*

Dr. Milligan, in his edition of Celsus, gives the following table, exhibiting the troy weight of measures of capacity and weight in use among the Romans:

| | *Urna.* | *Libra.* | *Uncia.* | *Denarius.* | *Scrupulus.* | *Sextans.* | *Chalcus.* | *Grana.* |
|---|---|---|---|---|---|---|---|---|
| Amphora | 2 | = 80 | = 960 | = 6720 | = 20160 | = 40320 | = 403200 | = 420480 |
| Urna | 1 | = 40 | = 480 | = 3360 | = 10080 | = 26160 | = 210600 | = 210240 |
| Congius | ¼ | = 10 | = 120 | = 840 | = 2540 | = 5040 | = 50400 | = 52920 |
| Sextarius | | 1⅔ | = 20 | = 140 | = 420 | = 840 | = 8400 | = 8760 |
| Libra | | 1 | = 12 | = 84 | = 252 | = 504 | = 5040 | = 5256 |
| Hemina | | | 8 4/7 | = 60 | = 180 | = 360 | = 3600 | = 3759 |
| Acetabulum | | | 2 1/7 | = 15 | = 45 | = 90 | = 900 | = 939 |
| Sesqui-cyathus | | | 2 1/7 | = 15 | = 45 | = 90 | = 900 | = 939 |
| Cyathus | | | 1 3/7 | = 10 | = 30 | = 60 | = 600 | = 626 |
| Sescuncia | | | 1½ | = 10½ | = 31½ | = 63 | = 630 | = 657 |
| Uncia | | | 1 | = 7 | = 21 | = 42 | = 420 | = 438 |
| Cochleare | | | | 2½ | = 7½ | = 15 | = 150 | = 156 |
| Drachma | | | | 1 | = 3 | = 6 | = 60 | = 62 4/7 |
| Denarius | | | | 1 | = 3 | = 6 | = 60 | = 62 4/7 |
| Scrupulus | | | | | 1 | = 2 | = 20 | = 20⅔ |
| Scrupulus dimidiatus | | | | | ½ | = 1 | = 10 | = 10⅓ |
| Obolus | | | | | | 1 | = 10 | = 10⅓ |
| Sextans | | | | | | 1 | = 10 | = 10⅓ |
| Chalcus | | | | | | | 1 | = 1 1/30 |

#### 3. *Weights said to be of the Arabians, Modern Greeks, and Latins of the Barbarous Periods of the Middle Ages.*

| | *oz.* | *dr.* | *gr.* |
|---|---|---|---|
| The alchemion | 14 | 3 | 40 |
| The manes or ominos | 10 | 6 | 28 |
| Sacros, augbhen, adar, assatil | | 7 | 16 |
| The great or royal nut | | 3 | 44 |
| The sextarius, stater | | 3 | 44 |
| The lesser nut | | 2 | 50 |
| Aliovanus | | 2 | 29 |
| Aureus, alcobolus | | 2 | 14 |
| The hazel-nut, bendacate, holca, alchi, darchimi, atogochilos, ologinat, nabach | | 1 | 11 |
| The acorn, lupine, Egyptian or Syrian bean, the bachil | | | 42 |
| The Alexandrian bean, also sometimes called the tremessis | | | 30 |

#### (*c*) *Measures said to be of the Arabian, Arabist, and Latin Physicians of the Middle Ages.*

| | *lbs.* | *oz.* | *dr.* | *gr.* |
|---|---|---|---|---|
| The missohaos weighed | 3 | 8 | 1 | 33 |
| Aben, kirt, ejub, eberia, or Roman mina | 1 | 6 | 0 | 00 |
| The phial, haffilius, or hassitinus | | 10 | 1 | 18 |
| The calix or rejelati | | 6 | 0 | 44 |
| The handful, pugillum, cornusum | | 3 | 2 | 68 |
| The hassuf, aesasse, or anesime | | 2 | 4 | 20 |
| The conos or coatus, alcantus or almunesi, briale cuabus | | 1 | 5 | 34 |
| The lesser bachates | | | 5 | 56 |
| The largest spoonful | | | 4 | 44 |
| A spoonful | | | 1 | 52 |
| The colanos or reclanarium | | | 1 | 28 |
| A small spoonful or flagerina or cyanes | | | 1 | 11 |
| The smallest spoonful or fahaliel | | | | 42 |

### APPROXIMATE WEIGHTS AND MEASURES.

Besides the weights and measures above mentioned there are modes of estimating the quantities of substances by approximation. For example:

A glassful or cupful is reckoned to contain 4 or 5 fluidounces.

A wineglassful, about 2 fluidounces.

A tablespoonful, about half a fluidounce.

A dessertspoonful, about 2 fluidrachms.

A teaspoonful, a fluidrachm.

A handful, manipulus, as much as can be held in the hand.

The pugillus, pinch, as much as can be held by the thumb and first two fingers.

**Weil's disease′.** Relapsing febrile icterus. An acute infectious febrile affection, characterized by a distinct fever range of eight or ten days' duration, jaundice with enlarged liver and spleen, persistent headache, and frequently complicated by acute nephritis. The mortality is small, and recovery is usually rapid and complete. This disease may be mistaken for typhoid fever.

**Weir Mitch′ell's disease′.** See *Mitchell.* **W. M.'s treat′ment,** see *Rest cure.*

**Weiss's re′flex.** A peculiar appearance observed with the ophthalmoscope on the nasal side of the point of entrance of the optic nerve into the retina; it is a preliminary symptom of myopia. **W.'s sign** or **symp′tom,** contraction of the muscles of the face on slight tapping; it has been observed in neurasthenia, exophthalmic goitre, hysteria, tetany, and other cachectic conditions.

**Weiss′mann's bun′dle.** A bundle of striated muscular fibres found in the neuromuscular spindle.

**Weit′brecht's car′tilage.** Interarticular cartilage of the claviculo-acromial articulation. **W.'s fora′men ovā′le,** foramen in the capsule of the shoulder-joint. **W.'s lig′ament,** ligament of Weitbrecht; oblique ligament. **W.'s retinac′ula,** flat, ligamentous bands on the neck of the thigh-bone, formed by the less superficial fibres of the capsular ligament.

**Wel′come-to-our-house.** Euphorbia cyparissias.

**Weld.** Reseda luteola.

**Weld′ing.** Firm union of two bodies of the same metal, caused by driving them together by percussion.

**Welk.** Whelk, wheal. An inequality or protuberance; a cutaneous eruption of this character. Acne.

**Wellingto′nia gigante′a.** Sequoia gigantea, according to English botanists.

**Wells's fa′cies.** Facies ovarica or ovarina; the facial expression of ovarian suffering.

**Welt.** Wheal.

**Wen.** Encysted sebaceous tumor, affecting chiefly the scalp and face; single or multiple.

**Werl′hoff's disease′.** Purpura hæmorrhagica.

**Wer′nekink's com′missure.** Decussating fibres of the middle peduncle of the cerebellum.

**Wer′nicke's apha′sia.** Sensory aphasia of the cortex of the brain. **W.'s cen′tre,** auditory word-centre in the back part of the first temporosphenoid convolution. **W.'s convolu′tion,** first temporosphenoid convolution. **W.'s disease′,** acute hemorrhagic polioencephalitis. **W.'s fi′bres,** fibres passing from the optic centre in the occipital lobe to the posterior eminence of the optic thalamus and the external geniculate body. **W.'s field,** W.'s triangle. **W.'s fis′sure,** fissure occasionally observed separating the parietal and temporal lobes from the occipital lobe. **W.'s sign,** hemiopic pupil reaction, when the lesion of the optic nerve is between the optic chiasm and the external geniculate body; contraction of the pupil from illumination of one side of the retina, but not from illumination of the other side. **W.'s tri′angle,** triangular space made by decussation of the fibres of Gratiolet (see *Gratiolet's optic radiation*) with the fibres passing from the external geniculate body and posterior eminence of the optic thalamus.

**West Af′rican pep′per.** Ashantee pepper. **W. In′dian ki′no,** kino from Jamaica. **W. I. molas′ses,** the residue from the manufacture of raw sugar.

**West′brook's opera′tion.** Cardiocentesis or puncturation of the heart.

**West′ern mug′wort.** Artemisia ludoviciana. Employed by Western Indians to arrest uterine contraction in labor and to stop hemorrhage.

**West′phal's nu′cleus.** Small gray nucleus situated beneath the Sylvian aqueduct near the median line. It is connected with the oculomotor nuclei. It is supposed to give origin to the fibres which supply the sphincter pupillæ muscles. **W.'s paradox′ical contrac′tion,** tonic contraction of the anterior muscles of the leg when the foot is passively flexed; observed in paralysis agitans, alcoholism, tabes, etc. **W.'s sign** or **symp′tom,** absence of knee-jerk or patellar reflex in tabes dorsalis. **W.'s zone,** zone or girdle in the posterior column of the spinal cord in the lumbar region, in which are the afferent fibres which take part in the patellar reflex movements.

**West′phal-Erb's sign.** See *Westphal's sign.*

**West′phal-Piltz phenom′enon.** The attempt to contract the orbicularis oculi muscle and close the eye, while the lids are held apart, is accompanied by narrowing of the pupil.

**Wet-brain.** Excessive serosity of the brain or its membranes, as observed in delirium tremens, general paralysis, etc.

**Wet-cup.** See *Cupping.*

**Wet-nurse.** A woman suckling the child of another, in contradistinction to dry-nurse, who does not suckle infants.

**Wet-pack.** The enveloping of a patient in wet sheets covered by dry woollen blankets; used to control fever.

**Wet-strap′ping.** See *Water-dressing.*

**Weyl's test.** A test for kreatinin. A few drops of a slightly brownish solution of sodium nitroprusside is added to the urine, followed by dilute sodium hydrate solution, which gives the mixture a red color, disappearing in a few minutes. When this mixture is heated with glacial acetic acid, if kreatinin be present a green color changing to blue is produced.

**Whahoo′.** Eunonymus.

**Whar′ton's amputa′tion.** See *Amputation.* **W.'s duct,** excretory duct of the submaxillary gland. **W.'s jel′ly,** mucous tissue of the umbilical cord.

**Wheal.** Weal, wale. Ridge or elevation of the skin produced by a rod or whip, or as if produced in that manner. Such elevations are seen in urticaria.

**Wheal′worm.** Leptus autumnalis, or harvest bug. Acarus scabiei.

**Wheat.** Triticum. **In′dian w.,** Zea mays. **W. phos′phates,** organized phosphates of the bran, said to assist assimilation. **W. starch,** see *Starch.* **Tur′key w.,** Zea mays.

**Wheel′house's opera′tion.** A method of external urethrotomy in which the urethra is opened on a grooved staff in front of the stricture, which is then divided and dilated with appropriate instruments.

**Wheeze.** To breathe with difficulty and noise, as in asthma. The respiratory effort is called *wheezing.*

**Whelk.** Acne; pustule; wheal. **Chin w.,** sycosis. **Ro′sy w.,** gutta rosea.

**Whet′stone's crys′tals.** Xanthin crystals.

**Whet′tlebones.** Vertebræ.

**Whey.** Serum lactis. **W. cure,** in the Kursaal of many German watering-places a space is set apart for whey drinkers; whey is a pleasant diluent, and the saccharine matter it contains may act as a eutrophic, but the main effect on the valetudinarian is probably produced by the new impressions made upon him by his visit to the watering-place. **W. pro′teid,** lactoprotein.

**Whick′flaw.** Whitlow.

**Whiff.** A puff or short blow of air. **O′ral w.,** sound heard in thoracic aneurysm; see *Drummond's whiff.*

**Whiff′ing mur′mur.** See *Murmur, respiratory.*

**Whim′berry.** Vaccinium myrtillus.

**Whip′tongue.** Gallium mollugo.

**Whip′worm.** Trichocephalus dispar.

**Whirl bone.** Head of the thigh-bone. Patella.

**Whirl′ing chair.** See *Chair.*

**Whis′key.** See *Spirit.* **W. liv′er,** see *Liver, nutmeg.* **W. nose,** acne rosacea.

**Whis′per, cav′ernous.** See *Cavernous.*

**Whis′pering.** Articulation of the air sent through the vocal tube without any action of the glottis. **W. souf′fle,** see *Souffle.*

**Whist′ling.** See *Râle, sibilant.* **Wa′ter w.,** see *Water.*

**White ag′aric.** A fungus, *Polyporus officinalis,* used as a cathartic, and in small doses for night-sweats of phthisis. **W. al'der,** Clethra alnifolia. **W. ant'imony,** antimony trioxide. **W. ar'senic,** ordinary arsenious acid. **W. ash,** Fraxinus americana. **W. at'rophy,** atrophy of a nerve, the nerve-substance disappearing, without any inflammatory products. **W. a. of the op'tic nerve,** form of atrophy due to some disease beyond the eye, of cerebral origin. **W. a'vens,** Geum virginianum. **W. bacil'lus of wa'ter,** Bacillus albus. **W. ball,** Cephalanthus occidentalis. **W. bal'sam,** that obtained from the fruit of Myroxylon pereiræ by expression, coming chiefly from San Salvador; also Gnaphalium polycephalum. **W. bay,** Magnolia glauca. **W. bis'muth,** subnitrate of bismuth. **W. blis'ters,** rupia escharotica. **W. bole,** a silicate of aluminum found in nature; contains a trace of iron; possesses absorbent and astringent properties. **W. cell,** leucocyte. **W. clo'ver,** Trifolium repens. **W. cohosh',** Actæa alba. **W. col'umns,** white columns of the spinal cord. **W. com'missure,** anterior portion of the spinal commissure, also called anterior commissure. **W. cor'puscle,** leucocyte. **W. cream of tar'tar,** potassium bitartrate. **W. dit'tany,** Dictamnus albus. **W. of egg,** albumin ovi. **W. elm,** Ulmus americana. **W. flag,** Florentine orris. **W. flake,** plumbi subcarbonas. **W. flux,** psilosis. **W. f. of In'dia,** diarrhœa alba or chylosa. **W. galls,** the nutgalls procured after the escape of the fly; they are inferior to black galls. **W. gan'grene,** moist gangrene with obstruction of the lymphatic vessels and anæmia. **W. gum,** Lichen strophulus. **W. hel'lebore,** Veratrum album; rhizome is used in medicine; it is an exceedingly violent emetic and cathartic; externally it is employed as a parasiticide. **W. ipecacuan'ha,** root of Richardsonia scabra of Brazil. **W. lead,** plumbi carbonas. **W. leaf,** Pyrola maculata; Spiræa tomentosa. **W. leg,** phlegmasia dolens. **W. let'tuce,** Prenanthus albus. **W. lily,** the bulbs and flowers of Lilium album; the bulbs are used as a poultice, and an oily infusion of the flowers is also employed locally. **W. line of pel'vic fas'cia,** white line extending from the pubis to the spine of the ischium, aponeurotic in nature, situated on the inner surface of the obturator internus muscle, and marking the origin of the levator ani and rectovesical fascia. **W. lu'pine,** Lupinus albus. **W. liq'uefying staphylococ'cus,** Staphylococcus albus liquefaciens. **W. mat'ter of the brain,** the conducting fibres in the brain; see *Cerebrum.* **W. mel'ilot,** Melilotus albus. **W. mus'tard,** Sinapis alba; seed is employed in medicine as an emetic, counterirritant, and stimulant. **W. oak bark,** bark of Quercus alba. **W. pep'per,** ripe fruit of Piper nigrum; rarely used. **W. Peru' bal'sam,** soft resin compressed from the fruit of Myroxylon pereiræ. **W. pine,** Pinus strobus. **W. pop'lar,** Liriodendron tulipifera. **W. precip'itate,** hydrargyrum ammoniatum. **W. root,** Angelica lucida; Asclepias tuberosa; Ligusticum actæfolium. **W. res'in** or **ros'in,** ordinary rosin which has been fused and then mixed with water, thus being rendered opaque and white. **W. saun'ders,** Santalum album. **W. snake'root,** Eupatorium ageratoides. **W. soft'ening,** fatty degeneration of cerebral tissue following a circumscribed inflammation. **Span'ish w.,** bismuth subnitrate. **W. spots,** achromia unguium. **W. sub'stance of Schwann,** see *Nerve-fibre.* **W. swell'ing,** fungous (tuberculous) arthritis. **W. s. of ly'ing-in women,** phlegmasia dolens. **W. tar'tar,** crude, impure bitartrate of potassium deposited during fermentation on the outside of casks containing white wine. **W. tinc'ture,** composed of cinchona, 6; gentian, 2; orange-peel, 2; cinnamon, 1; dilute alcohol, 50. **W. tur'pentine,** official turpentine. **W. vera'trum,** Veratrum album. **W. ver'vain,** root of Verbena urticifolia; has been used in malaria. **W. vit'riol,** sulphate of zinc. **W. wal'nut,** Juglans cinerea. **W. wax,** bleached yellow wax. **W. weed,** Chrysanthemum leucanthemum. **W. wine,** according to Ph. U. S., the fermented juice of grapes free from seeds, skins, and stems; containing not less than 10 nor more than 14 per cent., by weight, of alcohol. **W. wood,** liriodendron; Tilia americana.

**White's disease'.** Psorospermosis follicularis; Keratosis follicularis. **W.'s opera'tion,** removal of both testicles, that atrophy may occur in an enlarged prostate.

**White'cap.** Spiræa tomentosa.

**Whi'tening.** Whiting.

**Whites.** Leucorrhœa.

**Whi'ting.** Prepared chalk; used as whitewash and in the manufacture of putty. Also Gadus merlangus.

**Whit'leya stramonifo'lia.** Anisodus luridus.

**Whit'low.** Paronychia. **W. grass,** genus *Draba,* of ord. *Cruciferæ.*

**Whoop'ing-cough.** Pertussis.

**Whorl.** In botany, a number of organs arranged about the central axis of a plant; verticil. **W. of the heart,** vertex of the heart.

**Whor'lywort.** Leptandra purpurea.

**Whor'tleberry.** Vaccinium myrtillus; Vaccinium vitis idæa. **Bear's w.,** Arbutus uva ursi.

**Whorts, black.** Vaccinium myrtillus.

**Whytt's disease'.** Hydrocephalus internus. **W.'s tinc'ture,** contains gentian, cinchona, and orange-peel.

**Wich'mann's asth'ma.** Laryngismus stridulus; thymic asthma.

**Wick'ersheimer's flu'id.** Liquid with which to inject, or in which to place, anatomical preparations and specimens. It consists of arsenic trioxide, potassium sulphate, sodium chloride, potassium nitrate and carbonate, water, methyl alcohol, and glycerin.

**Wico'py.** Dirca palustris.

**Widal's' reac'tion or test.** A test for typhoid fever, based upon the fact that the blood serum of a person with this disease possesses the property of arresting the motility and causing a clumping of the Eberth bacillus. Blood from the suspected patient is added to a fresh bouillon culture of typhoid bacilli in the proportion of 1 part to 10; if the case is one of typhoid fever the bacilli in the culture rapidly become agglutinated, forming tangled masses.

**Wid'owwail.** Cneorum tricoccum; Daphne Alpina.

**Wig'ger's ergotin'.** Extract of ergot, prepared from ergot from which the fixed oil has been extracted with ether.

**Wild.** Uncultivated; untamed. An epithet given to the countenance when not in harmony with the condition of the individual, indicating strong mental emotion, as a wild look. **W. all'spice,** Benzoin odoriferum. **W. ba'sil,** Chenopodium vulgare; Pycnanthemum incanum. **W. ber'gamot,** Monarda fistulosa. **W. cab'bage,** Brassica oleracea. **W. cham'omile,** Martula cotula. **W. cher'ry,** Prunus virginiana; sedative, tonic, and expectorant. **W. cher'ry bark,** bark of Prunus serotina. **W. clove,** Myrcia acris. **W. fire,** erysipelas. **W. fire rash,** ignis sylvaticus; strophulus of infants. **W. gar'lic,** Canadian snakeroot, Asarum canadense; the rhizome is used; has diaphoretic, stimulant, and carminative properties. **W. hip'po,** Euphorbia ipecacuanha. **W. Job's tears,** Onosmodium virginianum. **W. leek,** Allium triococcum. **W. lich'en,** Lichen agrius. **W. mint,** Mentha canadensis. **W. monks'hood,** Aconitum uncinatum. **W. on'ion,** Allium cernuum. **W. pars'nip,** Sium latifolium. **W. pep'pergrass,** Lepidium virginicum. **W. rad'ish,** Raphanus raphanistrum. **W. rose'mary,** Andromeda polyfolia. **W. thyme,** Thymus serpyllum. **W. yam,** rhizome of Dioscorea villosa, indigenous in the Eastern States; has been used in bilious colic.

**Wilde's cords.** Transverse striæ on the corpus callosum, showing the course of fibres from one hemisphere to the other. **W.'s incis'ion,** incision of the soft parts over the mastoid in cases of inflammation in the mastoid cells. **W.'s lu'minous tri'angle,** a triangular luminous area on the membrana tympani, passing downward and forward from the umbo.

**Wil′dermuth's ear.** Congenital prominence of the antihelix, the helix being turned in a downward direction.

**Wilks's kid′ney.** Large white kidney. **W.'s symp′tom-com′plex,** pseudoparalytic myasthenia; asthenic bulbar paralysis.

**Will.** Voluntas.

**Wil′lan.** Salix.

**Wil′lan's lep′rosy.** Psoriasis. **W.'s lu′pus,** lupus vulgaris.

**Wil′lard's disease′.** Lupus vulgaris.

**Wil′liams's sign.** Lessened expansion of the left side of the chest on inspiration in adherent pericardium. **W.'s tra′cheal sound,** high sound heard, in infiltration of the lung, on percussing over the second and third ribs near the sternum.

**Wil′lis's acces′sory nerve.** Spinal accessory nerve. **W.'s ar′teries,** anterior and posterior communicating arteries of the brain. **W.'s cords,** fibrous bands or beams across the inferior angle of the superior longitudinal sinus; also transverse striæ on the corpus callosum, showing the course of fibres from one hemisphere to the other. **W.'s cir′cle,** an anastomotic circle of arteries at the base of the brain formed by the anterior and posterior cerebral arteries and the communicating arteries joining them. **W.'s disease′,** diabetes mellitus. **W.'s glands,** corpora albicantia. **W.'s ophthal′mic branch,** ophthalmic division of the fifth cranial nerve. **W.'s paracu′sis,** a form of auditory disturbance in which there is an augmentation of the power of hearing during a loud noise. **W.'s pouch,** the lesser omentum. **W.'s valve,** see *Valvula Vieussenii.*

**Wil′low.** Salix. **Bed′ford w.,** Salix fragilis. **Broad′-leaved w.,** Salix latifolia. **Crack w.,** Salix fragilis. **Great round′-leaved w.,** Salix caprea. **W. herb, com′mon,** Lythrum salicaria. **W. herb, great,** Epilobium angustifolium. **W. herb, pur′ple,** Lythrum salicaria. **W. herb, pur′ple-veined,** Epilobium coloratum. **Low bush w.,** Salix humilis. **Red w.,** Cornus sericea. **W. rose,** Cornus sericea. **Speck′led w.,** Salix humilis. **Sweet w.,** Myrica gale. **White w.,** Salix alba.

**Wil′son's disease′.** Generalized exfoliative dermatitis. **W.'s li′chen,** lichen ruber planus. **W.'s mus′cle,** an occasional fasciculus of the compressor urethræ connected with the pubis, near the symphysis.

**Wil′son-Brocq's disease′.** Wilson's disease.

**Winc′kel's disease′.** An acute disease of new-born infants, characterized by icterus, cyanosis, hemorrhages from various organs, infarctions of the kidney, and fatty degeneration of the liver. It is an extremely fatal affection. It is sometimes called epidemic hæmoglobinuria of the new-born.

**Wind.** Breath. Flatulence. **W. of a ball** or **shot,** sometimes improperly termed windage; a term applied to the compression of air supposed to be produced by the passage of a ball near a part of the body, so as to occasion what has been called a wind contusion. **W. contu′sion,** see *W. of a ball.* **W. drop′sy,** emphysema; tympanites. **W.-fer′tilized,** anemophilous, term applied to flowers the fertilization of which is effected by transportation of their pollen by the wind. **W. flow′er,** anemone. **W. get′ting,** gradual increase in the capability of the heart, especially of the right cavities, as a result of training. **W. pipe,** trachea. **W. pox,** varicella. **W. root,** Asclepias tuberosa. **W. stroke,** acute spinal paralysis of the horse. **W. weed,** Asclepias tuberosa.

**Wind′age.** See *Wind of a ball.*

**Win′dow.** Fenestra.

**Wind′iness.** Flatulence.

**Wind′sor bean.** Horse-bean, Vicia faba.

**Wind′y.** Flatulent; caused by or causing wind or flatulence, as windy food, windy colic, etc.

**Wine.** A name given by chemists to all liquors which have become spirituous by fermentation. The term is generally, however, restricted to the fermented juice of the grape, or fruits the product of whose fermentation resembles in almost all respects that of the juice of the grape. Wine is composed of the following ingredients (Pareira): Water, alcohol, bouquet or aromatic substance, sugar, gum, extractives, gluten (except when tannin is present), acetic acid, bitartrate of potassium, tartrate of potassium, aluminum (in German wines), sulphate of potassium, potassium and sodium chlorides, tannin, and coloring-matter (in red wines), carbonic acid (in champagne). The extractive coloring-matter is chiefly met with in red wines. All these constituents, except the alcohol and bouquet, are found ready formed in the grape. The alcohol proceeds from the decomposition of the saccharine matter. A part of the acetic acid is also formed during fermentation. In all wines there is more or less of an odorous principle, partly derived directly from the grape and partly formed during fermentation, which has the characters of an essential oil, constitutes the perfume or *bouquet* of the wine, and is said not to exceed the forty-thousandth part of the wine. It is regarded as a true ether—a combination of oxide of ethyl with œnanthic acid.

From a table by Brande, exhibiting the quantity of spirit in different kinds of wines and liquors prepared for the London market, we obtain the following information as to the proportion of alcohol in each:

PROPORTION OF ALCOHOL, S. G. 0.825, IN ONE HUNDRED PARTS BY MEASURE OF THE FOLLOWING WINES AND MALT AND SPIRITUOUS LIQUORS:

| | | | |
|---|---|---|---|
| Port—average | 23.48 | Champagne (still) | 13.80 |
| “ —highest | 25.83 | “ (sparkling) | 12.80 |
| “ —lowest | 21.40 | | |
| Madeira | 24.42 | “ (red) | 12.56 |
| “ | 23.93 | “ | 11.30 |
| “ | 19.24 | Red Hermitage | 12.32 |
| Sherry | 19.83 | Orange wine | 11.26 |
| “ | 19.81 | Tokay | 9.88 |
| “ | 18.79 | Elder wine | 9.87 |
| “ | 18.25 | Rhenish wine | 8.71 |
| Claret | 17.11 | Cider—highest | 9.87 |
| “ | 16.32 | “ —lowest | 5.21 |
| “ | 14.08 | Mead | 7.32 |
| “ | 12.91 | Ale (Burton) | 8.88 |
| Sauterne | 14.22 | “ (Edinburgh) | 6.20 |
| Burgundy | 16.60 | Brown stout | 6.80 |
| “ | 15.22 | London porter | 4.20 |
| “ | 14.53 | “ small beer | 1.28 |
| “ | 11.95 | Brandy | 53.39 |
| Hock | 14.37 | Rum | 53.68 |
| “ | 13.00 | Gin | 51.60 |
| “ (old in cask) | 8.88 | Scotch whiskey | 54.32 |
| Johannisberger | 8.71 | Irish “ | 53.90 |

The only wine recommended in some pharmacopœias is *sherry*. It is a dry wine, the least variable in its properties, and agrees best with the dyspeptic. The brown sherries differ from the pale in the addition of a coloring liquid to the former, termed arrope, prepared by boiling sherry down to a syrup; but they frequently owe their hue to burnt sugar or caramel. The wines habitually drunk are almost innumerable. Those that are sweet or contain a large portion of free saccharine matter are decidedly the least wholesome to the dyspeptic. For a list of the medicinal wines official in the pharmacopœias of the United States and Great Britain, see *Vinum.* **Diuret′ic w.,** a wine recommended by Trousseau as a hydragogue in organic affections of the heart, especially when accompanied with dropsy; it contained squill, juniper berries, digitalis, and potassium acetate in white wine. **Med′icated w.,** see *Vinum.* **Plas′tered w.,** w. to which gypsum has been added to temper its acidity.

**Wineglass.** A measure of capacity, equivalent to two fluidounces (60.0).

**Wine-nose.** Acne rosacea.

**Wing.** Ala. **W. of Ingras′sias** or **of the sphe′noid,** see *Alæ sphenoidales* and *Sphenoid bone.*

**Winged elm.** Ulmus alata. **W. scap′ulæ,** appearance presented by the projecting scapulæ in tuberculosis and other wasting diseases.

**Wing′seed.** Ptelea trifoliata.

**Wink′ers.** Cilia.

**Wink′ing.** Nictation. Momentary closure of the eyelids.

**Wins′low's fora′men.** Hiatus of Winslow. **W.'s lig′ament,** posterior ligament of the knee-joint; see *Genu.* **W.'s pan′creas,** the lesser pancreas. **W.'s pouch,** the lesser omentum. **W.'s stars,** collection of star-shaped capillaries that are the commencement of the venæ vorticosæ of the choroid coat of the eye.

**Win′ter bloom.** Hamamelis virginiana. **W. cher′ry,** physalis. **W. clo′ver,** Mitchella repens. **W. cough,** chronic bronchitis. **W. grapes,** frost grapes. **W. itch,** pruritus hiemalis; form of itch occurring in winter, chiefly on the lower extremities, attended by intense itching and burning sensation; the skin is commonly harsh and dry. **W. plum,** Diospyros virginiana: ordinary persimmon. **W. pruri′go,** w. itch. **W. sa′vory,** Satureia montana.

**Winte′ra** or **W. aromat′ica.** Winter's bark tree, ord. *Magnoliaceæ.* The bark is very much allied in its properties to Canella alba. **W. canel′la,** Canella alba.

**Wintera′na aromat′ica.** Wintera aromatica.

**Win′terberry.** Prinos.

**Win′tergreen.** Gaultheria.

**Win′ter's bark.** Bark of Wintera aromatica.

**Wint′rich's sign.** Change of pitch of percussion note over a cavity in the lungs, according as the mouth is opened or closed.

**Wir′sung's canal′** or **duct.** See *Pancreas.*

**Wis′dom teeth.** See *Dentition.*

**Wis′tar's loz′enge.** Troche of licorice with opium. **W.'s pyr′amids,** sphenoidal cornua.

**Wista′ria.** Genus of shrubs belonging to the order *Leguminosæ*, so named after Prof. Caspar Wistar, of the University of Pennsylvania.

**Wistarin′.** A poisonous glucoside from Wistaria chinensis.

**Wit teeth.** See *Dentition.*

**Witch′en.** Sorbus aucuparia.

**Witch-ha′zel.** Hamamelis virginiana; Sorbus aucuparia.

**Witch′meal.** Lycopodium.

**Witch′wood.** Sorbus aucuparia.

**With′ering.** Atrophy of an organ or part.

**With′erite.** Form of barium carbonate found in nature.

**With′ers.** Ridge above the shoulders of the horse, due to the prominent spinous processes of the dorsal vertebræ.

**Wit′zel's opera′tion.** Ligation of the superior gastric artery for the relief of hemorrhage from an ulcer of the stomach.

**Wiz′en.** Trachea.

**Wladi′miroff's opera′tion.** See *Vladimiroff.*

**Woad.** Isatis tinctoria. **W. wax′en,** Genista tinctoria.

**Woeh′ler's rings.** Meyer's rings.

**Woillez's′ disease′.** Acute idiopathic pulmonary congestion.

**Wolf′bane.** Veratrum viride.

**Wolfe-Kraus′e meth′od** A method of skin grafting by the transplantation of strips or pieces of the entire thickness of the skin.

**Wolff′ian bod′ies.** See *Corpus wolffianum.* **W. cyst,** cyst of the broad ligament of the uterus, derived from the remains of the Wolffian body. **W. duct,** duct of the Wolffian body. **W. tu′bules,** rows of tubules passing from the Malpighian bodies and discharging in the Wolffian duct.

**Wolf′-grape.** Solanum dulcamara.

**Wöl′fler's opera′tion.** Operation to establish a fistulous communication between the stomach and upper end of the small intestine in obstructive disease of the pylorus. **W.'s su′ture,** union of a divided intestine by continuous suture of the mucosa and a Lembert suture of the serosa; also a double stitch for uniting the ends of a divided tendon.

**Wolfs′bane.** Aconitum. **Whole′some w.,** Aconitum anthora.

**Wolfs′claw.** Lycopodium.

**Wolfs′jaw.** See *Harelip.*

**Wom′an.** Adult human female.

**Wom′anhood.** The state of puberty in the female. State or qualities of a woman.

**Womb.** Uterus. **Fall′ing of the w.,** prolapsus uteri. **W. grain,** ergot. **Inflamma′tion of the w.,** metritis. **Male w.,** sinus pocularis or prostatic vesicle. **W. pas′sage,** vagina. **W. stone,** uterine myoma which has undergone calcification. **Two-horned w.,** uterus bicornis. **Tym′pany of the w.,** physometra.

**Wom′ival.** Pareira medica.

**Wood.** The hard substance of a tree. **W. acid,** w. vinegar. **W. al′cohol,** methyl alcohol. **W. ap′ple,** fruit of Feronia elephantum, native of India; has been used as an astringent. **W. bet′ony,** Betonica officinalis. **Brazil′ w.,** Cæsalpina echinata. **W. char′coal,** see *Charcoal.* **Elk w.,** Andromeda arborea. **W. e′vil,** inflammation of the intestines or stomach and intestines of cattle. **W. flour,** sawdust. **W. lice,** Onisci aselli. **March w.,** sanicle. **W. naph′tha,** acetone. **Nicara′gua w.,** see *Cæsalpinia.* **W. oil,** gurjun balsam; see *Dipterocarpus.* **Pernambu′co w.,** Cæsalpina echinata. **W. roof, sweet-scent′ed,** Asperula odorata. **W. sage,** teucrium. **W. samp′fen,** Cæsalpina sappan. **W. soot, salt of,** ammoniæ carbonas. **W. sor′rel,** Oxalis acetosella. **Sour w.,** Andromeda arborea. **W. spir′it,** methylic alcohol. **W. straw′berry,** Fragaria vesca. **Sudorif′ic w.,** this term is applied collectively to guaiacum, sassafras, china, and sarsaparilla, which are often used together to form the sudorific decoction. **W. tar,** see *Tar.* **W. t. cre′osote,** creosotum. **W. tea,** a mixture of sassafras, guaiac wood, ononis root, and licorice root, official in the German Pharmacopœia. **W. tick,** ixodes. **W. vin′egar,** impure acetic acid obtained from destructive distillation of wood. **W. wax′en** or **W. wex,** Genista tinctoria. **Witch w.,** Sorbus aucuparia. **W. wool,** prepared wood fibre used as a surgical dressing. **Yel′low w.,** Oxalis stricta.

**Wood′bine, com′mon.** Lonicera periclymenum.

**Wood′bridge treat′ment.** Treatment of typhoid fever with small and frequently repeated doses of calomel, podophyllin, guaiacol, eucalyptol, and menthol.

**Wood′en tongue.** Disease of cattle, due to a microorganism, consisting of nodular tumors in the lung and in the subcutaneous and intermuscular tissues.

**Wood's meth′od.** Suturing together the pillars of the ring for the cure of inguinal hernia.

**Wood′y night′shade.** Solanum dulcamara.

**Wool.** Hair of sheep and certain other mammals. **W. fat,** lanolin. **Wood w.,** see *Wood.*

**Wool′ner's tip.** The tip of the helix of the ear.

**Wools, Holm′gren's.** Collection of different colored wools used to detect and estimate the degree of color-blindness.

**Wool-sort′ers' disease′.** Anthrax.

**Woora′li** or **Woora′ra.** Curare.

**Word.** The vocal or written expression of a concept. **W.-blind′ness,** loss of understanding of written or printed words, although the person so affected may be able to write and speak correctly, and even read by means of raised letters through the sense of touch; ideation regarding visual perception of letters is lost. **W.-cen′tre,** a nervous centre for perception and interpretation of words as symbolic of thoughts. **Aud′itory w.-c.,** seated in the left superior temporosphenoidal convolution, for appreciation of spoken words. **Vis′ual w.-c.,** seated in the posterior part of the left parietal lobe for appreciation of written or printed words; lesions of these centres cause word-blindness and word-deafness. **W.-deaf′ness,** loss of understanding of spoken words, which are heard as sounds only, while power of reading and understanding written or printed matter is retained.

**Worm.** A small, elongated, non-vertebrate animal, without legs, whose body is marked externally by rings or segments, and which progresses by creeping. In medicine, an endoparasite, entozoon, or helminth; also an anatomical structure resembling a worm. See *Vermis* and *Worms*. **W. ab'scess,** an abscess caused by or containing worms or maggots. **W. disease',** helminthiasis. **W. fe'ver,** that due to intestinal worms. **W. grass,** Spigelia marilandica. **Guin'ea w.,** dracunculus. **W. tea,** see *Spigelia*.

**Wor'mal.** Wormil.

**Worm'bark tree.** Geoffræa inermis.

**Worm'grass, peren'nial.** Spigelia marilandica.

**Wor'mia excel'sa.** Tree belonging to the *Dilleniaceæ*, native of Java, having large yellow blossoms.

**Worm'ian bones.** Ossa or ossicula wormiana. Small bones which are sometimes seen in the sutures of cranial bones, of which they form a part. They are called wormiana, from Olaus Wormius, who is said to have first described them. They had been previously, however, mentioned by G. Andernach, a physician at Strasburg. The ossa wormiana exist more commonly in the sutures of the vault of the skull, especially in the lambdoidal, sagittal, and squamous. They are uncommon at the base of the skull. Their size is very variable and shape irregular. Their structure and development are similar to those of the other bones of the cranium, and, like them, they are bounded by sutures.

**Worm'il.** Warble. Larva of the gadfly, which, burrowing under the skin, produces an irritating tumor. Also small, hard tumor on a horse's back.

**Worm'it.** Artemisia absinthium.

**Worm'root.** Spigelia marilandica.

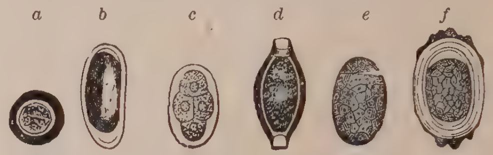
**Worms.** See *Worm*. The parasitic worms, endoparasites, entozoa, helmintha, are met with in the natural cavities, in the blood, in the tissues of the organs, and chiefly in the intestines.

### CLASSIFICATION OF PARASITIC WORMS.
### VERMES, HELMINTHA.

A. Platyhelmintha, flat worms.
  *Order.* Cestoidea, cestodes, or tapeworms.
  *Family.* Bothriocephalida: Bothriocephalus latus, B. mansoni, B. cordatus, B. cristatus.
  *Family.* Tæniada: (mature), Tænia solium, T. nana, T. flavopunctata, T. mediocanellata, T. cucumerina, T. acanthotrias, T. madagascariensis; (immature), Cysticercus cellulosæ, C. tenuicollis, C. vesicæ hominis, echinococci, acephalocysts.
  *Order.* Trematoidea, trematodes, or flukes.
  *Family.* Monostomida: Monostomum lentis.
  *Family.* Distomida: Distomum crassum, D. ringeri, D. sinense, D. hepaticum, D. lanceolatum, D. heterophyes, D. hæmatobium, D. ophthalmobium, D. conjunctum.
  *Family.* Amphistomida: Amphistomum hominis.

B. Nemathelmintha, round worms.
  *Order.* Nematoidea, nematodes, or thread worms.
  *Family.* Strongylida: Strongylus longevaginatus. Eustrongylus gigas, Uncinaria duodenalis, U. americana.
  *Family.* Anguillulida or Rhabdonemida: Rhabditis or Anguillula genitalis, R. stercoralis or intestinalis.
  *Family.* Trichotrachelida: Trichocephalus dispar (whipworm), Trichina spiralis.
  *Family.* Filarida: Filaria or Dracunculus medinensis (Guinea worm), F. sanguinis hominis (including F. diurna, F. nocturna, F. perstans), F. loa, and other species of filaria.
  *Family.* Ascarida: Ascaris lumbricoides, A. lata or mystax or marginata, A. maritima, Oxyuris vermicularis.

The most common of these are the Oxyuris vermicularis, Ascaris lumbricoides, and tæniæ, which are found in the intestines. They are most frequently met with in children, but their presence cannot be positively detected by any symptoms except that of the discharge of the worms themselves or their eggs in the evacuations. They may, of course, give rise to every kind of irritation in the intestinal tube, and to sympathetic disturbance in most of the functions; but all these signs may be produced by intestinal irritation resulting from other causes.



Eggs of intestinal worms: *a*, Tænia solium; *b*, Oxyuris vermicularis; *c*, Uncinaria duodenalis; *d*, Trichocephalus dispar; *e*, Bothriocephalus latus; *f*, Ascaris lumbricoides.

**Worm'seed.** Artemisia santonica; Chenopodium anthelminticum.

**Worm'weed.** Corallina corsicana; Polanisia graveolens.

**Worm'wood.** Artemisia absinthium. **Bien'nial w.,** Artemisia biennis. **Can'ada w.,** Artemisia canadensis. **Com'mon w.,** Artemisia absinthium. **Creep'ing w.,** Artemisia rupestris. **Les'ser w.,** Artemisia pontica. **Ro'man w.,** Artemisia pontica. **Sea w.,** Artemisia maritima. **Silk'y w.,** Artemisia glacialis.

**Wor'sted test.** Method for the detection and measurement of color-blindness by means of skeins of variously colored wools.

**Wor'sum.** Pus.

**Wort.** An infusion of malt formerly used in scurvy.

**Wound.** A solution of continuity in the soft parts produced by some mechanical agent. Wounds present innumerable differences as regards their situation, the parts interested, direction, size, shape, the nature of the instrument or agent producing them, their more or less simple or complex character, duration, etc. A wound is called *incised* when made by a cutting instrument; *punctured* when made by a pointed instrument; *lacerated* when parts are lacerated or torn by the vulnerating body; *poisoned* when some virulent or venomous substance has been introduced; and *contused* when produced by a blunt body. *Gunshot* wounds belong to the last division, but those made with the modern projectiles often partake more of the character of punctured wounds.

**Wound'weed.** Solidago odora.

**Wound'wort.** Stachys, a genus of plants.

**Woura'li, Woura'ri,** or **Woura'ru.** Curare.

**Wour'nils.** Wormil.

**Wrack blad'der.** Fucus vesiculosus. Pila marina.

**Wrap'ping.** Packing in dry or wet sheets, called respectively dry packing and wet packing, to induce sweating.

**Wreath.** See *Karyokinesis*.

**Wrench.** Sprain.

**Wret'weed.** Euphorbia palustris.

**Wrick.** Sprain.

**Wright'ia.** Genus of shrubs belonging to the order *Apocynaceæ*, growing in India and the Eastern hemisphere. **W. antidysenter'ica,** Nerium antidysentericum. **W. tincto'ria,** tree of India, leaves of which furnish an inferior quality of indigo.

**Wright'ine.** $C_{20}H_{40}N_2$. Conessine; an alkaloid from the barks of Wrightia antidysenterica and Holarrhena antidysenterica; used in diarrhœa and dysentery.

**Wrink'le.** A furrow or fold in the skin of the face, forehead, vagina, etc. See *Corrugation*.

**Wrink'led.** Full of wrinkles.

**Wris'berg's abdom'inal brain.** The solar plexus. **W.'s an'sa memorab'ilis,** loop made by the right semilunar ganglion and the anastomosis of the right pneumogastric and great splanchnic nerves. **W.'s car'tilages,** cuneiform cartilages of the larynx. **W.'s gan'glion,** cardiac ganglion; ganglion of Gasser. **W.'s lin'gula,** nerve-filaments associating the motor and sensory roots of the trigeminal nerve. **W.'s nerve,** cutaneous nerves of the arm, from the second and third dorsal nerves. **W.'s pars interme'dia,** a small nerve joining the facial nerve in the auditory canal.

**Wrist.** Carpus. **W. clo'nus,** rhythmical contractions like those of ankle-clonus, produced by grasping the tips of the fingers and pressing the hand backward, so as to obtain hyperextension at the wrist. **W.-drop,** paralysis of the extensor muscles of the forearm, induced by lead poisoning. **W.-joint,** articulation of the radius and triangular fibrocartilage with the scaphoid, semilunar, and cuneiform bones of the carpus. **W. re'flex,** extension or flexion of the hand produced respectively by striking the extensor or flexor tendons at the wrist.

**Wri'ters' cramp, pal'sy, or spasm.** See *Cramp, writers'.*

**Wri'ting hand.** Peculiar position of the fingers, as if holding a pen, observed in cases of paralysis agitans.

**Wrong heir.** Cancellus.

**Wry'neck.** Torticollis.

**Wundt's tet'anus.** Enduring tetanic contraction of a frog's muscle, of traumatic origin or induced by a strong current of electricity.

**Wura'li.** Curare.

**Wur'ras.** Anthelmintic employed in Africa and resembling kamala.

**Wut'zer's opera'tion.** An operation proposed by Wutzer for the cure of inguinal hernia.

# X.

**Xanthæ′matin.** Yellow, bitter substance formed when hæmatin is dissolved in weak nitric acid.

**Xanthaline′** (*xanthos*, yellow). $C_{37}H_{36}N_2O_9$. An alkaloid of opium; a white, crystalline powder, forming salts with mineral acids, all of which are of a yellow color. The *hydrochlorate* and *nitrate* are the principal salts.

**Xan′thate.** A salt of xanthic acid.

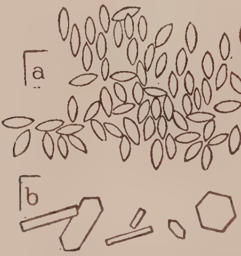
**Xantheïn′.** Yellow coloring-matter of plants.

**Xanthelas′ma** (*xanthos*, yellow, *elasma*, lamina). Xanthoma.

**Xanthelasmoi′dea.** Urticaria pigmentosa.

**Xan′thic** (*xanthos*, yellow). Having yellow color. **X. acid,** a heavy, oily liquid with pungent odor, an ester of thiosulphocarbonic acid. **X. cal′culus,** urinary calculus composed largely of xanthin. **X. ox′ide,** uric oxide.

**Xan′thin.** $C_5H_4N_4O_2$. Leucomain found in many parts of the body, in plants and seeds, and in urinary calculi; it may also be prepared synthetically. **X. ba′ses,** alloxur bases.



*a*, Crystals of xanthin; *b*, crystals of cystin. (Robin.)

**Xanthinu′ria.** Xanthuria.

**Xan′thium.** Lesser burdock, burweed, burthistle, clotbur, cocklebur. This herb was once employed in the treatment of scrofula. The seeds have been administered in cutaneous affections.

**Xanthiu′ria.** Xanthuria.

**Xantho-** (*xanthos*, yellow). Prefix meaning yellow.

**Xanthoceph′alus.** Term used to denote animals having yellow heads; also used to denote a mushroom having a yellow capitulum.

**Xanthochroi′a** (*chroia*, skin). Xanthopathia.

**Xanthochro′mia** (*xanthos*, yellow, *chroma*, color). Yellow or yellowish discoloration.

**Xanthoch′roous.** Having a yellow color.

**Xanthocreatinin′.** $C_5H_{10}H_4O$. Chief leucomain in muscles. Crystallizes in small, yellow plates. In sufficient dose it is capable of producing dangerous symptoms, ushered in by stupor, great muscular weakness, with vomiting and diarrhœa. In active muscles it is present with creatinin in about the proportion of 1 to 10 of the latter.

**Xanthocyano′pia** or **Xanthocyan′opy** (*xanthos*, yellow, *kyanos*, blue, *opsis*, vision). Form of color-blindness in which only yellow and blue are appreciated, red and green not being distinguished.

**Xanthocystin′.** Nitrogenous material found in tuberculous mucous membranes after death.

**Xanthoder′ma** or **Xanthoder′mia** (*xanthos*, yellow, *derma*, skin). Xanthopathia.

**Xan′thodont** or **Xanthodont′ous** (*xanthos*, yellow, *odous*, tooth). Having yellow teeth.

**Xan′thogen** (*gennao*, to produce). A vegetable coloring-matter which has a yellow reaction with alkalies.

**Xanthokyan′opy.** Red-green blindness; xanthocyanopy.

**Xantho′ma.** Xanthopathia. Neoplastic connective-tissue growths appearing as yellowish, variously shaped, non-indurated plates or tubercles, usually about the eyelids and rarely elsewhere. See *Vitiligoidea*. **X. diabet′icum** or **diabetico′rum,** an eruption occurring sometimes in the course of diabetes, and resembling xanthoma, from which, however, it is pathologically different. **Glycosu′ric x.,** x. diabeticum. **X. mul′tiplex,** lesions are multiple. **X. palpebra′rum,** a condition like vitiligoidea favosa, near the inner angle of the eyelids, usually associated with or dependent upon hepatic derangement. **X. pla′num,** x. having flat lesions. **X. tubercula′tum, tuberculo′sum,** or **tubero′sum,** x. in which the lesions are in the form of tubercles.

**Xantho′matous.** Relating to xanthoma.

**Xanthomel′anous** (*xanthos*, yellow, *melas*, black). Having yellow, brown, or olive skin and black hair.

**Xanthopath′ia** or **Xanthop′athy** (*xanthos*, yellow, *pathos*, affection). Yellow coloration of the skin produced by pigmentary change, including lentigo and chloasma.

**Xan′thophane.** An orange-yellow coloring-matter derived from the retina.

**Xan′thophyll** (*xanthos*, yellow, *phyllon*, leaf). A yellow pigment contained in leaves and in the petals of flowers.

**Xanthopicrin′** or **Xanthopic′rite** (*pikros*, bitter). See *Xanthoxylum clava Herculis*. The term *xanthopicrite* is also applied to a bitter, yellow principle obtained from several other plants.

**Xan′thoplasty.** Plastic operation for xanthoderma.

**Xanthop′ocrit.** Berberin.

**Xanthopro′teic.** Relating to xanthoprotein. **X. acid,** acid produced by decomposition between nitric acid and proteids; it is non-crystallizable. **X. reac′tion,** that produced by adding ammonia to proteids which have been boiled with nitric acid; the result is a deep orange-yellow color, due to the presence of xanthoprotein.

**Xanthopro′tein.** Yellowish substance obtained by acting on a proteid with nitric acid.

**Xanthop′sia** (*xanthos*, yellow, *opsis*, vision). Yellow vision, as sometimes occurs in jaundice.

**Xanthop′sin.** Yellow coloring-matter of the retina. A derivative of santonin, which gives color to the urine when santonica is taken internally.

**Xanthopsydra′cia** (*xanthos*, yellow, *psydrax*, a pustule). Pimples or pustules having a yellow color.

**Xanthopuccine′.** Alkaloid derived from hydrastis.

**Xanthorhamnin′.** Yellow coloring-matter found in the berries of rhamnus.

**Xanthorrhi′za.** A genus of plants, ord. *Ranunculaceæ*. **X. apiifo′lia,** yellowroot, parsley-leaved yellowroot, yellowwort, shrub yellowwort; root of this American plant is a strong and pleasant bitter, and in doses of gr. xx–xxx (1.3–2.0) is a good stomachic.

**Xanthorrhœ′a.** Grasstree. A genus of trees in Australia, ord. *Liliaceæ*, of which there are several species. Two resins are obtained from them: one, the yellow resin of xanthorrhœa or of New Holland, Botany Bay resin or gum, acaroid resin or gum, which probably resembles tolu and storax in medicinal properties; the other, the red resin of xanthorrhœa, the blackboy gum.

**Xantho′sis.** Yellow discoloration often observed in cancerous tumors, especially in encephaloid of the testicle.

**Xanthostrumarin′.** Yellow, non-crystalline glucoside derived from the fruit of Xanthium strumarium.

**Xan′thous.** Having a yellow skin.

**Xanthoxyla′ceæ.** Natural order of trees in China and Japan; they all have aromatic properties.

**Xanthox′ylene.** $C_{20}H_{16}$. The volatile oil of Xanthoxylum piperitum after xanthoxylin has been separated from it.

**Xanthox′yli fruc′tus.** Prickly-ash berries. See *Xanthoxylum.*

**Xanthoxylin′.** See *Xanthoxylum clava Herculis.*

**Xanthox′ylum.** (Ph. U. S.) The bark of *X. americanum* and *X. clava Herculis,* prickly ash. Emmenagogue, antispasmodic, and stimulant; dose of the official *extrac′tum xanthox′yli flu′idum,* ♏x–xxx (0.65–2.0). The fresh juice, expressed from the root of xanthoxylum, is said to afford relief in the "dry belly-ache" of the West Indies. A decoction of the bark is sometimes used as a wash for foul ulcers. **X. america′num,** prickly ash of the Northern and Middle States; X. fraxineum. **X. caribbæ′um,** a West Indian shrub, said to possess antipyretic qualities. **X. carolinia′num** has similar properties, but is more acrid. **X. cla′va Her′culis,** of the West Indies, is a strong stimulant and powerful sialagogue; has been given internally in rheumatism; a neutral, very bitter, and astringent substance has been obtained from it, called *xanthopicrin, xanthopicrite,* or *xanthoxylin.* **X. fraxin′eum** or **fraxinifo′lium,** X. americanum. **X. nit′idum,** shrub of China; febrifuge. **X. octan′dra,** Fagara octandra. **X. piperi′tum,** Fagara piperita. **X. ramiflo′rum,** xanthoxylum. **X. senegalen′se,** the source of artar root, a cardiac stimulant. **X. tricar′pum,** X. americanum.

**Xan′thuret.** The product of the combination of xanthogen with a metallic base.

**Xanthu′ria.** A condition in which xanthic oxide is deposited from the urine.

**Xantoli′na.** Artemisia santonica.

**Xenar′thral** (*xenos,* strange, *arthron,* joint). Articulated in an unusual or peculiar way, as the vertebral column.

**Xenem′bole** (*xenos,* strange, *embole,* insertion). Xenenthesis.

**Xenen′thesis** (*xenos,* a stranger, *tithemi,* to place). The act of putting any foreign body within the organism.

**Xenog′amy** (*xenos,* stranger, *gamos,* marriage). Term applied to cross-fertilization of flowers by pollen from another plant of the same species. The pollen is carried by the wind and by various insects.

**Xenogen′esis.** See *Heterogenesis.*

**Xenogen′ic.** Of foreign origin; a term used to qualify those cytotoxins which result from the action of bacterial stimuli on the cells of the host.

**Xenog′enous** (*xenos,* strange, *gennao,* to produce) Originating from outside the system or produced by a foreign body. **X. sidero′sis,** excess of iron in the system, from some outside source.

**Xenome′nia** (*xenos,* foreign, *meniaia,* menstruation). Abnormal or vicarious menstruation.

**Xen′on.** A monatomic gas present in minute proportion, one part in twenty millions, in the atmosphere; when illuminated by electric light it appears of a brilliant green color.

**Xenophthal′mia.** Conjunctivitis caused by the presence of a foreign body in the eye; traumatic conjunctivitis.

**Xeran′sis** (*xeros,* dry). Arefaction; drying.

**Xeran′tic.** Producing dryness or being dry.

**Xera′sia** (*xeros,* dry). A disease of the hairs, which become dry, cease to grow, and resemble down covered with dust. **X. cap′itis,** xerasia. **X. sauri-oi′des,** an accumulation of sebaceous substance on the surface of the skin, desiccating in scales or spines.

**Xe′rion** or **Xe′rium** (*xeros,* dry). Catapasm.

**Xero-** (*xeros,* dry). In composition, dry.

**Xerocollyr′ium.** A dry collyrium.

**Xeroder′ma** or **Xeroder′mia** (*xeros,* dry, *derma,* skin). Asteatosis; diminution of secretion of the sebaceous glands. Several diseases of the skin are marked by dryness; in the principal one, to which the name is applied, the skin is rough and discolored, and there is a furfuraceous desquamation. **X. ichthyo′des,** ichthyosis. **X. pigmento′sum,** diffuse idiopathic cutaneous atrophy, preceded by general hyperæmia with vascular dilatation; the production of numerous telangiectoses, with brownish macules and superficial atrophic depressions.

**Xe′roform.** $C_6H_2Br_3O,BiO$. Bismuth-tribromphenol, bismuth-tribromcarbolate. Yellow, non-irritating powder. Intestinal antiseptic, used internally in cholera, mucous enteritis, intestinal tuberculosis and autointoxication, etc., and externally in wounds, abscesses, eczema, chancre, pruritus, etc.; dose, gr. viij–xv (0.5–1.0).

**Xero′ma.** Xerophthalmia. **Conjuncti′val x.,** xerophthalmia. **Lac′rymal x.,** suppression of the lacrymal secretion; see *Xerophthalmia.*

**Xeromyc′ter** or **Xeromycte′ria** (*xeros,* dry, *mykter,* nose). Dryness of the nose.

**Xerom′yron** (*xeros,* dry, *myron,* ointment). A dry ointment.

**Xeropha′gia** or **Xeroph′agy** (*xeros,* dry, *phago,* to eat). Excessive use of dry aliment.

**Xerophthal′mia** or **Xerophthal′mus.** An inflammation of the eye, without discharge. This term—as well as *conjunctival* and *lacrymal xeroma* and *cuticular conjunctiva*—has been given to cases in which the conjunctiva is so changed that it presents more of the characters of skin than of mucous membrane. Lippitudo.

**Xero′sis.** Dryness. Xeroderma. Xerophthalmia. **X. epithelia′lis,** keratomalacia. **X. infanti′lis,** keratomalacia. **X. parenchymato′sa,** xerosis due to trachoma. **X. seni′lis,** sclerosis incident to old age. **X. superficia′lis,** keratomalacia. **X. triangula′ris,** keratomalacia.

**Xeros′toma** or **Xerosto′mia** (*xeros,* dry, *stoma,* mouth). Deficiency of buccal secretion. Aptyalism.

**Xero′tes.** Dryness.

**Xerot′ic.** Relating to or accompanied by xerosis or dryness.

**Xerotrip′sis.** Dry friction.

**Xime′nia.** African plant, the leaves of which are anthelmintic.

**Xiphister′num.** Xiphoid cartilage.

**Xipho-** (*xiphos,* sword). In composition, ensiform cartilage.

**Xiphocos′tal.** Costoxiphoid; relating to the xiphoid cartilage and the ribs. **X. lig′ament,** the ligament extending from the xiphoid to the cartilage of the seventh rib. See *Xiphoid ligament.*

**Xipho′des.** Xiphoid.

**Xiphod′ymus.** Thoracogastrodidymus.

**Xiphodyn′ia** (*odyne,* pain). Pain in the ensiform cartilage.

**Xi′phoid** (*xiphos,* sword, *eidos,* resemblance). Sword-shaped; ensiform. **X. car′tilage,** the ensiform cartilage, process, or appendix, the pointed cartilage forming the lower extremity of the sternum. **X. lig′ament,** costoxiphoid ligament, is a small, very thin, ligamentous fasciculus passing from the cartilage of prolongation of the seventh rib to the anterior surface of the xiphoid cartilage, where it is inserted by its fibres decussating with those of the opposite ligament.

**Xiphoi′dian.** Relating or attached to the xiphoid cartilage.

**Xiphop′agus** (*pegnymi,* to fix). Monstrosity in which twins are united by the epigastrium, as in the case of the Siamese twins.

**Xiphoster′nal.** Relating to the ensiform cartilage of the sternum. **X. crunch′ing sound,** a superficial sound heard on auscultation a little to the left of the lower end of the sternum, like that caused by the boot treading on soft snow, possibly a pericardiac friction sound; also called x. chisel sound.

**Xiphoster′num.** Xiphoid cartilage.

**X-leg.** Deformity in which there is adduction of both hips so that the legs cross each other. Also double knock-knee in which the legs appear to cross.

**X-rays.** Roentgen rays; see *Rays.*

**Xy′lene.** Xylol.

**Xylo-al′oes** (*xylon*, wood). Agallochum.

**Xylobal′samum.** See *Amyris opobalsamum.*

**Xylocar′pous** (*xylon*, wood, *karpos*, fruit). Bearing woody fruit.

**Xylocas′sia.** Laurus cassia.

**Xylochlo′ral.** Combination of xylose and chloral.

**Xylocinnamo′mum.** Laurus cinnamomum.

**Xy′loid** (*xylon*, wood, *eidos*, resemblance). Wood-like, woody; having resemblance to wood.

**Xyloidin′.** $C_6H_9(No_2)O_5$. Substance formed by the action of nitric acid on potato starch. It is a tasteless white powder, soluble in boiling water and insoluble in alcohol.

**Xy′lol** (*xylon*, wood). Colorless hydrocarbon derived from coal-naphtha by distillation, mixture with sulphuric acid, and dry distillation, and subsequent purification. It has been employed in variola. It is given in doses of ♏x–xv (0.65–1.0) to adults, ♏iij–v (0.2–0.32) to children, every hour or two, in that disease. Chemically, dimethyl benzine.

**Xylo′ma.** Woody tumor of plants.

**Xy′lonite.** Celluloid-like substance prepared from pyroxylin.

**Xyloph′ilous** (*xylon*, wood, *phileo*, to love). Term applied to animals and plants living in or upon decayed wood.

**Xylo′pia.** Genus of shrubs of ord. *Anonaceæ,* growing in the West Indies and Brazil; possessing aromatic properties. **X. aromat′ica** bears aromatic fruit which is used as a condiment. **X. grandiflo′ra** bears fruit which possesses carminative properties.

**Xy′lose** (*xylon*, wood). $C_5H_{10}O_5$. Sugar derived from beechwood.

**Xylosteïn′.** Poisonous glucoside from the berries of Lonicera xylosteum. Emetocathartic.

**Xylostyp′tic e′ther.** Styptic collodion.

**Xylother′apy** (*xylon*, wood, *therapeia*, healing). Treatment of disease by various woods.

**Xy′ris.** Iris fœtidissima. **X. bulbo′sa,** yellow-eyed grass; indigenous; ord. *Xyridaceæ;* roots and leaves are used by the Hindoos in leprosy and chronic cutaneous diseases.

**Xy′sis** (*xyo*, to scrape). Rubbing, scraping, tearing, rasping.

**Xys′ma** (*xysma*, shaving). False membrane in diarrhœal stools.

**Xys′mus** (*xyo*, to scrape). Scraping, as a bone.

**Xys′ter** (*xyster*, a scraper). Instrument for scraping.

**Xys′trum** (*xystron*, a scraper). Instrument for scraping. **X. ophthal′micum,** instrument for scraping the eye or the lids.

**Xyxida′ceæ.** A natural order of small shrubs, growing chiefly in the tropics.

# Y.

**Y.** Chemical symbol of yttrium.

**Yab'a bark.** Bark of Andira excelsa.

**Yabine'.** Alkaloid from yaba bark; antiperiodic.

**Yam.** Esculent root principally obtained from Dioscorea alata, D. bulbifera, and D. sativa. They grow spontaneously in both the Indies, and their roots are eaten as the potato is with us. The taste is somewhat like that of the potato. **Wild y.,** Dioscorea villosa.

**Y-an'gle.** Angle between the radius fixus and line between the lambda and inion.

**Yar'row.** Achillea millefolium.

**Yau'pon.** Ilex vomitoria.

**Ya'va skin.** Elephantiasis arabum.

**Yaw'ey.** Affected with yaws.

**Yawn'ing.** Gaping, pandiculation. A deep inspiration, with considerable separation of the jaws, executed slowly and in an involuntary manner, followed by a prolonged sonorous expiration. This respiratory movement is preceded by a feeling of oppression in the epigastric region and in the muscles of respiration and mastication. Yawning has been conceived to be owing to torpor in the pulmonary circulation, the causes producing it being commonly ennui, fatigue, sleepiness, monotonous sounds, hunger, etc.; the impulse to yawn is strikingly contagious. Yawning often precedes the invasion of certain intermittents, attacks of hysteria, etc., and it may, by its frequency and obstinacy, become a true disease.

**Yaw'root.** Stillingia.

**Yaws.** Frambœsia.

**Yb.** Chemical symbol of ytterbium.

**Y-car'tilage.** Cartilage uniting the three parts of the hip-bone in the acetabulum, before puberty; later in life it undergoes ossification.

**Yeast.** A substance, part of which collects on the surface and part sinks to the bottom in fermenting beer. It is a mass of cells of a microscopic plant growth, *Saccharomyces cerevisiæ* (see cut under this head). Yeast is antiseptic. It is applied in the form of cataplasm to foul ulcers, and has also been used as an injection in vaginal gonorrhœa. **Y. plant,** Saccharomyces cerevisiæ.

**Yelk.** See *Yolk.*

**Yel'low.** One of the seven primitive colors. See *Spectrum.* **Y. ash,** Cladrastis tinctoria. **Y. at'rophy of the liv'er,** an acute general disease of the liver attended by destructive changes in the cells; also called malignant jaundice, because of its extreme fatality. **Y. bed'straw,** Galium verum. **Y. ber'ry,** Podophyllum montanum. **Y. cincho'na,** bark of Cinchona calisaya. **Y. dock,** Rumex crispus. **Y. dye tree,** Cœlocline polycarpa. **Y. elas'tic tis'sue,** form of connective tissue having anastomosing fibrillæ; elastic, broken ends curl up, and acids and alkalies do not affect it like ordinary connective tissue. **Y. eye,** Hydrastis canadensis. **Y. fe'ver,** an acute infectious disease of warm latitudes characterized by tenderness in the epigastrium, jaundice, constipation, vomiting (often of altered blood, "black vomit"), fever, and albuminuria; the disease is undoubtedly caused by the presence of a microorganism, probably protozoan, but this has not yet been isolated; it is communicated from the sick to the well by the agency of a mosquito, *Stegomyia fasciata.* **Y. gen'tian,** Gentiana lutea. **Y. i'odide of mer'cury,** mercurous iodide. **Y. Jack,** yellow fever. **Y. jas'mine,** gelsemium. **Y. la'dies' bed'straw,** Galium verum. **Y. lig'aments** occupy the spaces between the vertebral plates, from the interval which separates the second vertebra from the third to that which separates the last vertebra from the sacrum; they are so called in consequence of their color. **Man'chester** or **Mar'tius's y.,** a coal-tar dye, used sometimes for histological or bacteriological stains. **Y. mel'ilot,** Melilotus altissimus. **Y. mercu'rial lo'tion,** yellow wash. **Y. mercu'ric ox'ide,** hydrargyri oxidum flavum. **Y. mus'tard seed,** white mustard. **Y. oint'ment,** unguentum hydrargyri oxidi flavi. **Y. ox'ide of mer'cury,** mercuric oxide. **Y. paint,** Hydrastis canadensis. **Y. paril'la,** Menispermum canadense. **Y. pine,** Pinus palustris. **Y. pond'-lily,** Nuphar advena. **Y. pop'lar,** Liriodendron tulipifera. **Y. precip'itate,** yellow oxide of mercury. **Y. prus'siate of pot'assium,** ferrocyanide of potassium. **Y. puccoon',** Hydrastis canadensis. **Y. res'in,** resina. **Y. root,** Jeffersonia bartoni; hydrastis. **Pars'ley-leaved y. r.,** Xanthorrhiza apiifolia. **Shrub y. r.,** Xanthorrhiza apiifolia. **Y. saun'ders,** Santalum album. **Y. soft'ening,** circumscribed area of degeneration of the brain or spinal-cord tissue succeeding to red softening. **Y. spot,** macula lutea. **Y. star,** Helenium autumnale. **Y. subsul'phate of mer'cury,** mercuric basic sulphate; turpeth mineral. **Y. vis'ion,** xanthopsia, usually dependent on jaundice. **Vis'ual y.,** a term sometimes applied to the visual purple after it has lost its color under the influence of light. **Y. wash,** made by addition of mercuric chloride to lime-water in the proportion of 1 to 243; it consists of mercuric oxide held in suspension by calcium chloride solution. **Y. wa'ter-lily,** Nuphar advena. **Y. wax,** ordinary beeswax; to prepare, express the honey, melt the residue in boiling water, and pour into moulds. **Y. weed,** Ranunculus acris. **Y. wood,** Xanthoxylum fraxineum. **Pars'ley-leaved y. w.,** Xanthorrhiza apiifolia. **Y. wood'sorrel,** Oxalis stricta.

**Yel'lows.** Cypripedium luteum. Icterus.

**Yem'en ul'cer.** Cochin China ulcer.

**Yer'ba bue'na.** Micromeria douglasii. **Y. man'sa,** Anemopsis californica; the leaves possess tonic, astringent, and stimulant properties, and have also been used in malarial fevers. **Y. maté,** Ilex paraguayensis; Paraguay tea. **Y. reu'ma,** Frankenia grandifolia. **Y. sagra'da,** Lantana braziliensis; antipyretic. **Y. san'ta,** Eriodictyon californicum.

**Yest.** Yeast.

**Yew'tree.** Taxus baccata. **Amer'ican y.,** Taxus canadensis.

**Y-lig'ament.** Ileofemoral ligament.

**Yoke bone.** Malar bone.

**Yolk.** The yellow part of a bird's egg; vitellus. The formative or germinative portion of the ovum, sometimes with the addition of nutrient material. **Y. cells,** y. granules. **Y. food,** nutrient material in the ovum for the growth and support of the embryo. **Form'ative y.,** living protoplasm of the ovum and its nucleus. **Y. gran'ules,** small granules within the yolk. **Y. mem'brane,** see *Vesicula umbilicalis.* **Y. plates,** plate-like yolk-granules. **Y. rest,** central mass of cells forming segmentation spheres. **Y. sac,** the bag-like portion of the sphlanchnopleure extending beyond the body of the embryo. **Y. stalk,** the narrow part of the yolk-sac connecting it with the embryo. **Y. of wool,** suint.

**Yo'pon.** Ilex vomitoria.

**Young's rule.** A rule for adjusting the dose of medicines to the age of the patient. Add twelve to the age and divide the age by the result. See *Doses.*

**Young-Helm'holtz the'ory.** An hypothesis explaining color-sense by the supposition that there are three kinds of nervous elements corresponding to the primary colors, and that we perceive these colors by stimulation of these nerve-elements.

**You'pon.** Ilex cassine. "Black tea," formerly used by the Indians, consisted of a decoction of the leaves of this plant. It contains caffeine, and is still used in the Southern United States as a beverage.

**Youth.** Adolescence.

**Youth'wort.** Drosera rotundifolia.

**Ypseloglos'sus.** Basioglossus.

**Yr'ides.** Orpiment.

**Y. s.** Abbreviation for yellow spot, macula lutea.

**Ysam'bra.** An ancient Spanish poison, of which hellebore formed the greatest part.

**Y-shaped cen'tre.** Y-cartilage.

**Ys'ope.** Hyssopus.

**Ytter'bium.** A metal, symbol Yb, believed to be an element, but of which little is yet known.

**Yt'tria.** An earth, oxide of yttrium, named from Ytterby, Sweden, where it was discovered.

**Yttrif'erous.** Relating to or containing yttria.

**Yt'trium.** A metal, symbol Y, the base of yttria. It is of a dark gray color, never occurs free in nature, and very little is known concerning its properties.

**Yuc'ca.** Genus of plants, ord. *Liliaceæ.* Bear-grass. Spanish bayonet. **Y. filamento'sa** grows in the Southern United States; a tincture of its root has been recommended in gonorrhœa; Adam's needle is a popular name for this plant.

**Yulan'.** Magnolia conspicua, a Chinese tree cultivated as an ornament in the United States.

**Yvon's' coeffi'cient.** Ratio between the amount of urea and phosphates in the urine, being about $\frac{1}{8}$.

**Yzquierdo's** (is-ke-er'dos) **bacil'lus.** Microorganism of verruca peruana.

# Z.

**Zacatil′la.** A variety of commercial cochineal.

**Za′el.** Borosail.

**Zaf′fre.** Smalt.

**Zahn's ribs.** Marks on a thrombus made by the ends of columns of leucocytes and blood platelets.

**Zam′bo.** See *Mulatto* and *Sambo*.

**Za′mia integrifo′lia** and **Z. pu′mila.** See *Arrowroot*.

**Zanaloïn′.** Aloin from Zanzibar aloes. Socaloin.

**Zang's space.** Space between the two tendons of origin of the sternomastoid muscle in the fossa supraclavicularis.

**Zan′na.** A kind of Armenian bole, used by the ancients as a desiccative; also called zarnacha.

**Zappa′nia nodiflo′ra.** Anacoluppa.

**Zar.** A form of hysteria in Abyssinian women.

**Ze′a.** A genus of grasses, ord. *Graminaceæ*, including several species growing in the United States. The official (Ph. U. S.) name of the styles and stigmas of *Z. mays*, or corn-silk. The dose of the non-official *extrac′tum ze′æ flu′idum* is ʒss–ij (2.0–8.0). **Z. mays**, Indian corn, corn, Turkey or Indian wheat, maize, a native of America, much used over the whole continent as an article of diet.

**Zedoa′ria** or **Zed′oary.** Kæmpferia rotunda.

**Zeis′mus.** Term used to denote the condition of the system induced by the consumption of diseased maize as food.

**Zeis′sian glands.** Sebaceous glands which have their outlet on the free border of the eyelids. **Z. stye**, acute inflammation of a Zeissian gland.

**Zelo′sis** or **Zelotyp′ia** (*zelos*, love, *typos*, form). Insane jealousy.

**Ze′ma.** Decoction.

**Zenk′er's crys′tals.** Charcot's crystals. **Z.'s degenera′tion**, waxy degeneration of muscle-substance seen after acute febrile attacks. **Z.'s paral′ysis**, paralysis and paræsthesia in the lower extremities caused by excessive kneeling.

**Zenk′erism.** Z.'s degeneration.

**Zeoc′riton dis′tichum.** Hordeum.

**Zer′ma** or **Zer′na.** Impetigo ulcerata.

**Ze′ro.** Nothing. The point on the thermometer scale from which the readings are made above and below. In the Centigrade or Celsius and Réaumur scales, zero is the freezing point of water; in the Fahrenheit scale it is 32° below this point. **Ab′solute z.**, the point at which heat, regarded as a form of motion, must cease; this is believed to be about —273° C.

**Zerum′bet.** Cassumuniar. **Z. root**, rhizome of Zinziber zerumbet; possesses carminative powers.

**Ze′sis.** Effervescence; decoction.

**Zestocau′sis** (*zestos*, boiling, *kauo*, to burn). Cauterization by means of heated vapor as a remedial agent.

**Zestocau′tery.** Instrument or apparatus or zestocausis.

**Zib′ethum.** Civetta.

**Ziehl's solu′tion.** Used in bacteriology. It contains 1 per cent. of fuchsin and 5 per cent. of carbolic acid.

**Ziems′sen's mo′tor points.** Points on the skin corresponding to the locations of the entrance of nerves into the muscular tissue.

**Zietris′ikite.** A native paraffin of Moldavia; it is solid and wax-like.

**Zim′merlin's type.** A form of progressive muscular atrophy in which there is absence of secondary lipomatosis.

**Zim′mermann's cor′puscles.** Blood plaques.

**Zinc.** A metal, symbol Zn, obtained from calamine and blende. Its color is bluish-white; the fresh surface has considerable lustre, but is soon dulled, from the facility with which it oxidizes; hard; sp. gr. 6.8. Melts at 700° F., burns with a bright flame in a higher temperature, and is volatilized in the form of a white, flocculent oxide. It is used in the construction of electrical batteries, and many of its salts are employed in medicine. The symptoms of chronic poisoning by zinc are similar to those of lead poisoning. For the zinc salts official in the Ph. U. S. and Br., see *Zinci*. **But′ter of z.**, zinci chloridum. **Z. car′bonate**, calamine. **Z. col′ic**, an affection, analogous to lead colic, occurring in chronic poisoning by zinc oxide. **Flow′ers of z.**, zinci oxidum. **Gran′ulated z.**, a granular form of metallic zinc, produced by dropping the melted metal into water. **Z. gynocar′date**, yellow powder, used in some cutaneous diseases in which gynocardic acid is employed. **I′odide of z. and morphine′**, prepared by boiling iodide of iodhydrate of morphine with water and zinc after they have acted on each other for some days, filtering, and crystallizing. It is considered to combine the properties of morphine and the salts of zinc, and has been prescribed as an anodyne and antispasmodic; dose, gr. ¼ (0.016). **Z. ox′ide, impure′**, tutia. **Z. oxychlo′ride**, preparation of zinc employed by the dentists for temporary filling and in the treatment of sensitive dentine; made by mixing a concentrated solution of the chloride with oxide of zinc recently prepared by burning zinc. **Z. perman′ganate**, a crystalline, deliquescent brownish salt; used as an astringent and antiseptic locally; employed in urethritis. **Z. sal′icylate**, a crystalline salt used as an antiseptic and astringent. **Z. subgal′late**, an antiseptic astringent in fermentative conditions of the intestines and in night-sweats; used externally in eczema, septic wounds, otorrhœa, gonorrhœa, etc. **I′odide of z. and strychnine′**, prepared by digesting for several days in hot water iodide of iodhydrate of strychnine and zinc, filtering, and crystallizing; used in the same cases as strychnine.

**Zin′ci ace′tas.** (Ph. U. S. and Br.) Acetate of zinc; frequently used to form a gently astringent wash in ophthalmia and other local inflammations, as an injection in gonorrhœa, in strength of gr. j–ij to ℥j of distilled water. **Z. bro′midum** (Ph. U. S.), bromide of zinc; made by dissolving zinc in solution of hydrobromic acid; white, soluble, granular powder; has been used in epilepsy in doses of gr. ss–ij (0.032–0.13). **Z. carbo′nas impu′rus**, calamine. **Z. carbo′nas præcipita′tus** (Ph. U. S.), precipitated carbonate of zinc; used to prepare zinci oxidum and as an external application. **Z. chlo′ridum** (Ph. U. S. and Br.), chloride of zinc; it is very deliquescent in the air, forming the *butter of zinc;* chloride of zinc is a powerful escharotic, and is the basis of different caustic applications; it is much employed as an effective disinfectant in the form of *Burnett's disinfecting liquid*. **Z. io′didum** (Ph. U. S.), a deliquescent white powder; dose, gr. ss–ij (0.032–0.13); an ointment composed of a drachm to an ounce of lard has been used in cases in which the external use of iodide of potassium is indicated. **Z. lac′tas**, white, soluble salt, given in epilepsy in doses of gr. ij (0.13), gradually increased to gr. x (0.65). **Z. nix**, zinci oxidum. **Z. o′leas** (Ph. Br.), **Z. olea′tum** (Ph. U. S.), used in the form of *unguen′tum zin′ci olea′tis*, regarded by many as preferable to the common zinc oxide ointment. **Z. ox′idum** (Ph. U. S. and Br.), flowers of zinc, a fine white powder, said to be tonic and antispasmodic; externally detergent and desiccative; employed in epilepsy, chorea, etc., in doses of gr. j–v (0.065–0.32); externally it is employed chiefly in the form of the official *unguentum*. **Z. o. impu′rum**, tutia. **Z. phe′nol-parasul′phonas**, z. sulphocarbolas. **Z. phos′phas**, a white, insoluble salt, employed in insanity occurring in convalescence from fevers, epilepsy, etc.; dose, in pill, gr. j–iij (0.065–0.2). **Z. phos′phidum** (Ph. U. S.), a gray powder, or small, crystalline masses, used in nervous diseases as a substitute for phosphorus; dose, gr. $\frac{1}{40}$–$\frac{1}{20}$ (0.0016–0.0032). **Z. sul′phas** (Ph. U. S. and Br.), sulphate of zinc, white vitriol, white copperas; in white, semitransparent, efflorescent crystals; is emetic, tonic, antispasmodic, and, externally, astringent; dose, as an emetic, gr. x–xxx (0.65–2.0); as a tonic, gr. j–ij (0.065–0.13); used externally as a collyrium, gr. j to water ℥j. **Z. sulphocar′bolas** (Ph. Br.), occurs in colorless, crystalline plates; used externally as an astringent in gonorrhœa and leucorrhœa in solutions of gr. ij–iij to ℥j; internally as an intestinal antiseptic in diarrhœa. **Z. valeria′nas** (Ph. U. S. and Br.), salt formed by saturating valerianic acid with freshly prepared carbonate of zinc, or by double decomposition of valerianate of sodium and sulphate of zinc; in pure white pearly scales; recommended as a tonic in neuralgic diseases, epilepsy, etc.; dose, gr. $\frac{1}{4}$–j (0.016–0.065).

**Zin′cic.** Relating to zinc.

**Zincif′erous.** Containing or relating to zinc.

**Zin′cite.** A form of reddish zinc ore.

**Zin′coid.** Resembling zinc.

**Zin′cum.** Zinc.

**Zinc-white.** Oxide of zinc, crude and impure.

**Zin′giber.** (Ph. U. S. and Br.) Ginger; the rhizome of Z. officinale. Carminative, stimulant, and sialagogue; dose, gr. x–xxx (0.65–2.0). The following are the official preparations: *Extrac′tum zingib′eris flu′idum;* dose, ♏x–xxx (0.65–2.0). *Oleores′ina z.;* dose, ♏ss–j (0.032–0.065). *Tinctu′ra z.;* dose, ʒss–j (2.0–4.0). Ginger also enters into the composition of pulvis aromaticus and pulvis rhei compositus. **Z. al′bum**, Amomum zingiber. **Z. cassumu′niar**, see *Cassumuniar*. **Z. commu′ne**, Amomum zingiber. **Z. fus′cum**, Amomum zingiber. **Z. german′icum**, Arum maculatum. **Z. ni′grum**, Amomum zingiber. **Z. officina′le**, the source of the official ginger. **Z. purpu′reum**, **Z. spu′rium**, and **Z. zerum′bet**, see *Cassumuniar*.

**Zingibera′ceæ.** Natural order of plants, including zingiber, renealmia, alpinia, and curcuma. They all possess aromatic and stimulant properties.

**Zinn's ar′tery.** Central artery of the retina. **Z.'s cir′cle**, plexus of small branches of ciliary arteries within the fibrous layer of the sclerotic coat, where the optic nerve enters. **Z.'s lig′ament**, that portion of the tendon of the recti muscles of the eye which is free from attachment to the sheath of the optic nerve. **Z.'s mem′brane**, anterior layer of the iris. **Z.'s ring**, circular sheath formed by the common tendon of the various rectus muscles of the eye. **Z.'s ten′don**, Z.'s ring. **Z.'s zo′nule** or **zone**, anterior portion of the hyaloid membrane around the margin of the crystalline lens.

**Zi′phac.** Peritoneum.

**Zir′bus.** Epiploon. **Z. adipi′nus**, gastrocolic epiploon.

**Zir′con.** A mineral compound of zirconia and silica; crystalline, transparent, sometimes red. The red crystals are used as jewelry, being called hyacinths.

**Zirco′nia.** One of the primitive earths. Chemically, oxide of zirconium.

**Zir′conite.** Name used for grayish or brownish crystals of zircon.

**Zirco′nium.** A metallic element, symbol Zr, the base of zirconia. It strongly resembles silicon in its properties, and assumes various allotropic forms.

**Zitt′mann's decoc′tion.** Decoctum Zittmanni.

**Ziza′nia aquat′ica.** Wild rice, Canada rice, water oats; ord. *Gramineæ;* called by the Indians Menomene; grows abundantly on the marshy margins of the northern lakes and waters of the upper branches of the Mississippi. The grain resembles oats.

**Ziz′yphus ju′juba.** See *Jujube*. **Z. lo′tus**, cultivated in Northern Africa for its fruit. **Z. nit′ida**, see *Jujube*. **Z. œnop′lia**, common all over India; fruit is eaten by the natives; decoction of the bark of the fresh root is used to promote the healing of fresh wounds. **Z. sati′va**, see *Jujube*. **Z. sylves′tris**, see *Jujube*. **Z. vulga′ris**, native of Asia Minor; valued for its fruit.

**Zoam′ylin** (*zoon*, animal, *amylon*, starch). Glycogen.

**Zoanthro′pia** or **Zoan′thropy** (*zoon*, animal, *anthropos*, man). A species of monomania in which the patient believes himself transformed into an animal. Lycanthropia and cynanthropia belong to this species of monomania.

**Zoa′ra.** Insomnia.

**Zoe′ther.** Protyle.

**Zoet′ic** (*zoe*, life). Vital; relating to life.

**Zo′etrope** (*zoe*, life, *trepo*, to turn). Instrument devised to revolve a series of pictures of men or animals in different attitudes, with the result that the figures depicted seem to be in motion.

**Zo′glas's lig′ament.** Part of the posterior sacro-iliac ligament between the posterior superior spinous process of the ilium and the side of the sacrum.

**Zograph′ia.** Zoographia.

**Zoïat′rus** (*zoon*, animal, *iatros*, a physician). Hippiater; veterinary surgeon.

**Zo′ic** (*zoon*, animal). Relating to animals or animal life.

**Zoll′ner's lines.** Parallel lines intersected obliquely by shorter ones, giving to the eye the appearance that they are not parallel.

**Zomidin′.** One of the component parts of beef extract.

**Zomother′apy** (*zomos*, broth). Treatment of disease by means of meat, particularly the treatment of tuberculosis by raw meat or the plasma expressed from raw meat.

**Zo′na** (*zone*, a girdle). An anatomical structure or cutaneous lesion resembling a belt or girdle. Herpes zoster. **Z. arcua′ta**, internal zone of basilar membrane. **Z. cartilagin′ea**, see *Lamina spiralis*. **Z. castita′tis**, hymen. **Z. choria′cea**, see *Lamina spiralis*. **Z. cilia′ris**, ciliary zone. **Z. coch′leæ**, see *Lamina spiralis*. **Z. coria′cea**, see *Lamina spiralis*. **Z. denticula′ta**, lamina denticulata. **Z. facia′lis**, herpes zoster of the face. **Z. fascicula′ta**, see *Zona reticularis*. **Z. gangliona′ris**, ganglion spirale. **Z. glomerulo′sa**, see *Zona reticularis*. **Z. ig′nea**, herpes zoster. **Z. incer′ta**, anterior portion of the reticular formation situated beneath the optic thalamus. **Z. læ′vis**, z. arcuata. **Z. media′na**, see *Lamina spiralis*. **Z. membrana′cea**, see *Lamina spiralis*. **Z. mol′lis**, see *Lamina spiralis*. **Z. ner′vea**, see *Lamina spiralis*. **Z. ophthal′mica**, herpes zoster in the region supplied by the ophthalmic nerve. **Z. orbicula′ris**, circular fibres of the capsule of the hip-joint. **Z. os′sea**, see *Lamina spiralis*. **Z. pectina′ta**, see *Lamina spiralis*. **Z. pellu′cida**, vitellary membrane, chorion (of some); the membrane surrounding the yolk in the mammalia; so called on account of its breadth and peculiar transparency. **Z. perfora′ta**, inner segment of the membrana basilaris. **Z. radia′ta**, name applied to z. pellucida on account of its radiating pore-channels. **Z. reticula′ris**, the inner layer, as *zona glomerulosa* is the outer layer, of the stroma of the cortical part of the suprarenal capsule; the main portion is *zona fasciculata*. **Z. rolan′dica**, precentral and postcentral convolutions. **Z. serpigino′sa**, herpes zoster. **Z. tec′ta**, inner part of the membranous spiral lamina of the internal ear, which is covered by the organ of Corti. **Z. tendino′sa**, the whitish circle around each auriculoventricular orifice of the heart. **Z. Valsal′væ**, membranous spiral lamina. **Z. vesicula′ris**, see *Lamina spiralis*. **Z. virginita′tis**, hymen.

**Zonæsthe′sia** (*zona*, girdle, *aisthesis*, feeling). Girdle sensation; morbid sensation of constriction of a part as by a rope or band.

**Zo′nal.** Relating to a zona. **Z. stra′tum,** layer of white nervous fibres on the surface of the thalamus opticus.

**Zo′nary.** Name given to the placenta of carnivora which forms a broad, circular band around the chorion.

**Zo′nate.** Characterized by the presence of bands around a body.

**Zone.** Cincture; girdle; the waist; herpes zoster. **Z. of bas′ilar mem′brane,** an inner and outer zone; the former extending from the labium tympanicum to the base of the rods of Corti, while the latter extends from the rods of Corti to the ligamentum spirale. **Cornuradic′ular z.,** external portion of Burdach's column. **Epileptogen′ic z.,** limited area of the body which when stimulated produces epileptiform convulsions. **Erotogen′ic z.,** area of the surface of the body which when stimulated produces excessive erotic desires or even convulsions. **Z. of Hal′ler,** ciliary zone. **Hysterogen′ic z.,** area of the body which when stimulated produces hysteroid or hysteroepileptoid convulsions. **Sclerot′ic z.,** arthritic ring; see *Sclerotic.* **Transi′tion** or **transi′tional z.,** z. in the equator of the crystalline lens, in which there occurs a change of epithelial fibres into lens fibres. **Z. of Zinn,** see *Zinn.*

**Zo′nula** (dim. of zona). Zonule; specifically, the z. of Zinn. **Z. cartilagin′ea,** crista spiralis. **Z. cilia′ris,** vascular layer between the margin of the retina and the periphery of the crystalline lens; z. of Zinn. **Z. coch′leæ,** see *Lamina spiralis.* **Z. Hilda′ni,** cingulum Hildani. **Z. ner′vea lam′inæ spira′lis membrana′ceæ,** crista spiralis. **Z. os′sea lam′ina spira′lis,** lamina spiralis ossea. **Z. of Zinn** or **Zin′nic z.,** see *Zinn's zone.*

**Zon′ular.** Belt-shaped. Relating to a zonule. **Z. cat′aract,** form of cataract in which opaque layers exist between the cortex and nucleus, alternating with clear, transparent layers; also called lamellar cataract. **Z. fi′bres,** fibres in the zonule of Zinn. **Z. spa′ces,** canal of Petit.

**Zon′ule.** Zonula.

**Zonuli′tis.** Inflammation of the zonule of Zinn.

**Zoöam′ylin** (*zoon,* animal, *amylon,* starch). Glycogen.

**Zoöbiol′ogy** (*zoon,* animal, *bios,* life, *logos,* treatise). Animal biology.

**Zoöbi′otism** (*zoon,* animal, *bios,* life). Animal life.

**Zoöcam′bium.** Vital fluid or principle; blastema.

**Zoöchem′ical.** Relating to animal chemistry.

**Zoöchem′istry** (*zoon,* animal). Animal chemistry.

**Zoödynam′ia.** The vital force or power of animals.

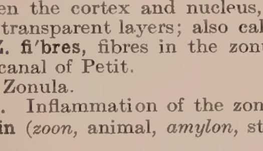
**Zoögalacti′na imet′ropa** (Sette). Bacillus prodigiosus.

**Zoögen′esis.** Generation of animals; breeding.

**Zoögenous,** zo-oj′en-us. Arising or developed from animals, as *z. diseases.*

**Zoög′eny** (*zoon,* animal, *gennao,* to beget). The doctrine of the origin and formation of living beings.

**Zoöglœ′a** (*zoon,* animal, *gloios,* glue). A developmental stage of certain microorganisms, during which they present themselves as small masses surrounded by jelly-like material. **Z. capillo′rum,** Palmellina capillorum. **Z. ramig′era,** a form of Cladothrix dichotoma. **Z. ter′mo** (Müller and Cohn), Bacillus termo.



Zoöglœa mass.

**Zoöglœ′ic.** Relating to or characterized by the presence of zoöglœa, as *z. tuberculosis.*

**Zoöglœ′oid.** Relating to the zoöglœa stage.

**Zoögo′nia** (*zoe,* life, *gone,* production). Bearing or production of living young. Zoögeny.

**Zoögonol′ogy** (*zoon,* animal, *gone,* production). Science of the origin and development of animal life.

**Zoög′onous.** Producing living young.

**Zoög′ony.** Zoögonia.

**Zoögraft′ing.** Grafting with pieces of skin from animals.

**Zoög′raphy** (*zoon,* animal, *graphe,* description). A description or natural history of animals.

**Zoöhæ′matin.** Hæmatin.

**Zo′öid** (*zoon,* animal, *eidos,* resemblance). Resembling or belonging to an animal; a living cell, for instance.

**Zo′ölite** or **Zo′ölith** (*zoon,* animal, *lithos,* stone). Term applied to petrified fossil remains.

**Zoölog′ical** (*zoon,* animal, *logos,* description). Relating to the natural history of animals.

**Zoöl′ogist.** One skilled in zoölogy.

**Zoöl′ogy.** The natural history of animals.

**Zoöno′mia** or **Zoön′omy** (*zoon,* animal, *nomos,* law). The law governing the organic actions of animals in general; animal physiology.

**Zoön′osis** (*zoon,* animal, *nosos,* disease). Disease caused by infection from animals, as hydrophobia, glanders, etc.

**Zoönosol′ogy** (*zoon,* animal, *nosos,* disease, *logos,* description). The nosology of animals.

**Zoönot′ic.** Of the nature of a zoönosis. **Z. erysip′eloid,** see *Erysipeloid.*

**Zoöpar′asite.** An animal parasite.

**Zoöpathol′ogy** (*zoon,* animal, *pathos,* disease, *logos,* description). The pathology of animals.

**Zoöph′agous** (*zoon,* animal, *phago,* to eat). Carnivorous.

**Zoöpharmacol′ogy.** Science of veterinary pharmacy.

**Zo′öphile.** One having a tenderness for animals; sometimes used in the sense of antivivisectionist.

**Zoöpho′bia** (*zoon,* animal, *phobos,* fear). Morbid fear of animals.

**Zoöphthal′mus** (*ophthalmos,* eye). Hydrophthalmia.

**Zoöphysiol′ogy.** Animal physiology; zoönomia.

**Zo′öphyte** (*zoon,* animal, *phyton,* plant). Phytozoon. A plant-like animal, such as the sponge.

**Zoöphytol′ogy.** Treatise on zoöphytes.

**Zoöpsychol′ogy.** The psychology of animals.

**Zoösmo′sis.** The passage of living protoplasm through a membrane, as in the processes of nutrition.

**Zo′ösperm.** Spermatozoon.

**Zo′öspore.** A spore possessing motility.

**Zoöther′apy.** Animal therapeutics.

**Zoöto′cia** (*tokos,* birth). Viviparous generation.

**Zoöt′omist** (*zoon,* animal, *tome,* incision). One who dissects animals; a comparative anatomist.

**Zoöt′omy.** Theriotomy, comparative anatomy. The anatomy of animals.

**Zoötroph′ic** (*zoon,* animal, *trophe,* nourishment). Relating to the nourishment of animals.

**Zopis′sa.** See *Pinus sylvestris.*

**Zo′pyron** (*zoo,* to be alive, *pyr,* fire). Fomites.

**Zoro′che.** Mountain sickness in the Andes.

**Zos′ter** (a girth). Herpes zoster; zona. Various forms of the disease are named, according to the region involved, as *z. abdominalis,* the abdomen; *z. auricularis,* the ear; *z. brachialis,* the arm; *z. capillitii,* the scalp, from involvement of the second branch of the fifth pair of nerves; *z. collaris,* the neck; *z. facialis,* the face; *z. femoralis,* the thigh; *z. frontalis,* the forehead; *z. nuchæ,* back of the neck; *z. ophthalmicus,* the eye; *z. pectoralis,* the chest.

**Zoste′ra mari′na** or **marit′ima.** Pila marina.

**Zoster′ic.** Relating to herpes zoster.

**Zos′teriform.** Resembling zoster.

**Zuck′erkandl's convolu′tion.** Gyrus subcallosus. Peduncle of the corpus callosum. **Z.'s dehis′cences,** small spaces in the delicate lamina of the ethmoid bone. **Z.'s vein,** small branch of ethmoid veins, forming a medium of communication between the veins of the side of the wall of the nose and the cerebral veins.

**Zygad′enas.** Death camas; a family of plants containing a few species, all of which are poisonous to man and animals; the bulbs are sometimes mistaken for those of the true camas, *Quamasia quamash.* The best known species are Z. elegans, Z. paniculatus, and Z. venenosus.

**Zy′gal** (*zygon*, a yoke). Relating to a yoke, H-shaped, jugal; a term applied to certain cerebral fissures resembling the letter H.

**Zygapoph′ysis** (*zygon*, yoke, *apophysis*). Articular process of a vertebra.

**Zygolabia′lis.** Zygomaticus minor.

**Zygo′ma** (*zygon*, yoke). Malar bone; zygomatic process.

**Zygomat′ic.** Jugal. Relating to the zygoma or cheek-bone. **Z. arch,** see *Zygomatic process.* **Z. bone,** malar bone. **Z. crest,** portion of the great wing of the sphenoid articulating with the malar bone. **Z. fos′sa,** the space included between the posterior margin of the outer ala of the pterygoid process and the crista which descends from the malar tuberosity to the superior alveolar margin. **Z. glands,** internal maxillary glands. **Z. head,** term applied by Henle to the zygomaticus minor muscles. **Z. mus′cles** are two in number: 1. *Zygomaticus major*, situated obliquely at the forepart and sides of the face; small, rounded muscle, arising from the outer surface of the malar bone, and inserted at the commissure of the lips, which it raises and draws outward. It acts principally in laughing. 2. *Zygomaticus minor*, does not always exist; situated on the inner side of the last; arises from the outer surface of the malar bone, and is inserted at the corner of the mouth, or rather into the upper lip, which it raises and draws outward. **Z. nerves,** branches of the facial to the zygomatic muscles. **Z. pro′cess,** malar or jugal process, arises from the outer surface of the temporal bone by two roots, one transverse, the other longitudinal; between them is the glenoid cavity. The process passes forward and is articulated with the posterior angle of the malar bone, with which it forms a bony bridge called the zygomatic arch. The cavity beneath the bridge is sometimes called the zygoma. **Z. spine,** sharp angles on the upper posterior surface of the zygomatic tuberosity. **Z. sur′face,** surface of the superior maxilla behind the zygomatic process. **Z. su′ture,** suture between the zygomatic parts of the temporal and cheek bones; it slants obliquely downward and backward. **Z. tuberos′ity,** rough surface on the portion of the superior maxilla articulating with the malar bone. **Z. width,** distance between the most prominent portions of the zygomatic arches.

**Zygomat′ico-angula′ris.** Small muscle arising from the malar bone near the orbital margin and inserted into the fascia about the external angle of the eye.

**Zygomat′ico-auric′ular.** Relating to the zygomatic arch or muscle and the ear. **Z.-a. in′dex,** numerical relation between the biauricular and bizygomatic diameters of the skull, the former being taken as 100. **Z.-a. mus′cle,** attrahens aurem muscle.

**Zygomaticofa′cial.** Relating to the zygoma and face.

**Zygomat′ico-or′bital.** Relating to the zygoma and orbit. **Z.-o. ar′tery,** the orbital branch of the temporal.

**Zygomaticosphe′noid.** Relating to the zygoma and sphenoid bone. **Z. fis′sure,** a cleft between the greater wing of the sphenoid and the zygoma.

**Zygomaticotem′poral.** Relating to the malar and the temporal bones.

**Zygomat′icum poste′rius.** Zygomaticotemporal foramen.

**Zygomat′icus.** Zygomatic muscle.

**Zygomax′illary point.** Inferior point of the zygomaxillary suture.

**Zy′gon.** Medium of connection of branches of a zygal or H-shaped cerebral fissure.

**Zygoneure′** (*zygon*, yoke, *neuron*, nerve). A nerve-cell that aids in connecting other nerve-cells.

**Zy′go-or′bital point.** Superior point of the zygomaxillary suture.

**Zygophyl′lum faba′go.** A plant, ord. *Zygophyllaceæ*, growing in Syria, having an acrid and bitter taste; vermifuge.

**Zy′lonite.** Celluloid.

**Zy′mase** (*zyme*, ferment). Soluble ferment. A ferment having its origin or causation in a microzyme.

**Zyme** (*zyme*, ferment). Ferment.

**Zymetol′ogy** (*zyme*, ferment, *logos*, treatise). Science in relation to the fermentation processes.

**Zy′mic.** Relating to fermentation.

**Zymine′.** Specific virus of zymotic disease.

**Zy′minized.** Acted upon by a zymine or ferment.

**Zy′mogen.** A substance which produces ferments. Such a principle exists in the pancreas, giving rise to trypsin.

**Zy′mogene.** Microorganism causing fermentation.

**Zymogen′ic.** Term applied to any substance producing ferments. **Z. bacte′ria,** microorganisms concerned in the various fermentations, as acetic, lactic, vinous, etc.

**Zy′moid** (*zyme*, ferment). Like an organized ferment. Toxin from decaying or fermenting matter.

**Zymol′ogy.** Zymetology.

**Zymol′ysis** (*zyme*, ferment, *lysis*, solution). Decomposition or digestion effected by the action of ferments.

**Zymolyt′ic.** Relating to or caused by zymolysis.

**Zymo′ma.** Ferment.

**Zymom′eter.** Zymosimeter.

**Zy′mophore** (*zyme*, ferment, *phoreo*, to carry). Toxophore.

**Zy′mophyte.** Ferments composed of bacteria, liberating fatty acids from neutral fats.

**Zy′mose.** Invertin.

**Zymosim′eter** (*zymosis*, fermentation, *metron*, measure). Instrument to measure the degree of fermentation.

**Zymo′sis.** Fermentation. See *Zymotic.*

**Zymot′ic.** Relating to fermentation. **Z. disease′,** any epidemic, endemic, or sporadic affection produced by the action on the organism of a morbific principle similar to a ferment, that is to say, any bacterial disease. **Z. prin′ciples,** certain matters which, of themselves or by their transformation, propagate zymotic diseases. **Z. the′ory of disease′,** see *Fermentation theory.*

**Zymotox′ic** (*zyme*, ferment, *toxikos*, poisonous). A term employed to designate the hæmolytic action of the toxophore group of the complement molecule.

**Zy′murgy** (*zyme*, leaven, *ergon*, work). The branch of chemical industries which has to do with brewing and other arts in which fermentation is an essential part.
